1. What's new 2
2. Finding your way around 3
3. Making a sale: adding items, scanning, sub-units 4
4. Changing an item: quantity, price, serial number 5
5. Holding a sale 6
6. Checkout and payment 7
7. Credit (part payment) sales 8
8. After the sale: receipts 9
9. The Sales book 10
10. Returns, payments and other changes to a sale 11
11. Working offline and syncing 12
12. Quick reference 13

1. What's new

Opens straight to selling

The Sales point is the first screen. The Sales book is one tap away.

Faster adding & search

Tap, search, filter by category, or scan. Sub-units like a cup of rice are listed beside the full unit.

Handheld & camera scanning

A handheld scanner works anywhere on the screen. Phones can use the camera.

Edit any item

Change quantity, unit or price, and add serial numbers, by tapping the item.

Hold sales

Park a sale, serve the next customer, and resume it later. Held sales stay on the device.

One checkout screen

Full or part payment, split payment, POS terminal, customer and delivery in one place.

New Sales book

Today, yesterday, any dates or open credit, with insights and full sale details.

Return some or all items

Including credit sales: the balance and any refund are worked out for you.

Find a sale

Scan the QR code on a receipt, or type the receipt number.

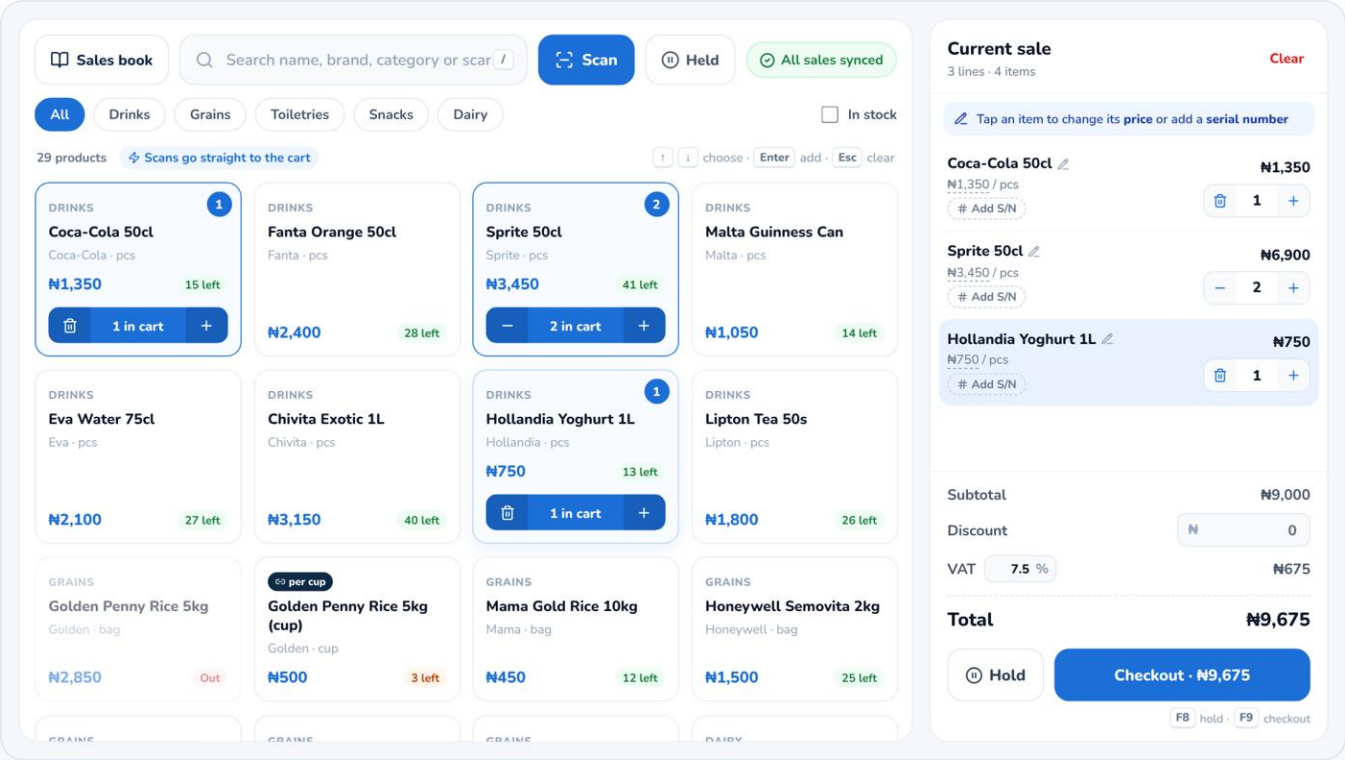

Works offline

Every sale and change is saved on the device first and synced in order.

SECTION 2

Finding your way around

Open a store and you land on the Sales point. Products are on the left, the current sale is on the right.

The Sales point on a computer or tablet.

Part of the screen	What it does
Sales book (top left)	Opens today's sales, insights, returns and credit. Your current sale is kept.
Search	Finds products by name, brand, category or barcode.
Scan	Opens the scanner (camera or handheld).
Held	Sales you parked. A red number shows how many are waiting.
Sync pill All sales synced	Shows whether every sale has reached the server. Tap it to see what's waiting (page 12).
Category chips & **In stock**	Narrow the product list. "In stock" hides items you can't sell.
Current sale (right)	Items, discount, VAT and total, with **Hold** and **Checkout**.

On a phone: products fill the screen and the sale is in a bar at the bottom. Tap the bar to open the cart (page 4).

SECTION 3

Making a sale

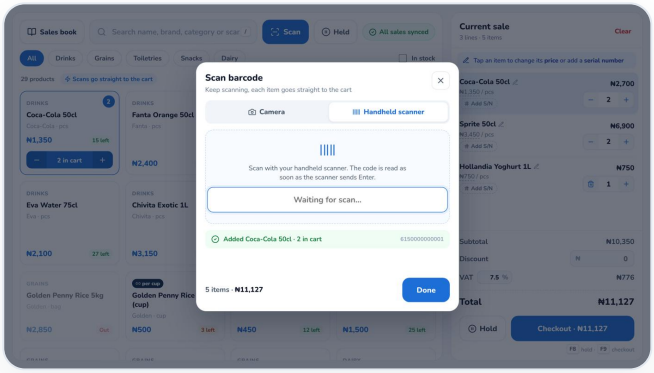

Add items

1. **Tap a product** to add one. Tap again, or use **+**, to add more. The card shows how many are in the sale and how many are left in stock.
2. **Search**: start typing a name, brand or category. Use ↑ ↓ to choose and **Enter** to add. **Esc** clears the search.
3. **Sub-units**: products sold in smaller units (for example *Golden Penny Rice 5kg (cup)*) appear as their own card with a **per cup** tag and their own price and stock.

> **Out of stock items** are greyed out and can't be added. You can't sell more than you have in stock.

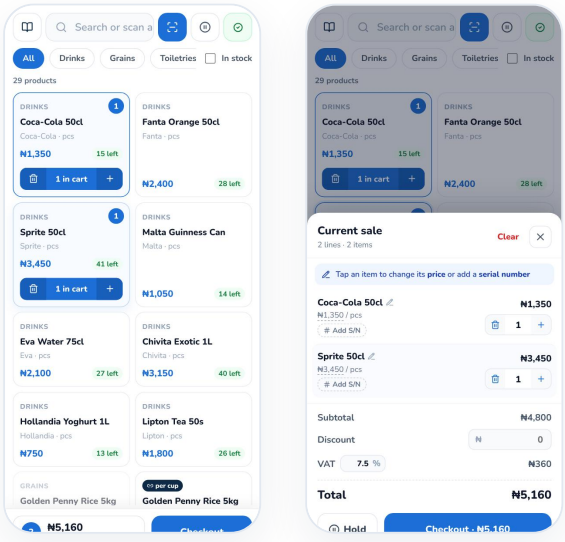

Scan barcodes

- **Handheld scanner:** just scan. You don't need to click anywhere first. In supermarket mode the item goes straight into the sale.
- **Camera or scanner window:** tap **Scan**. Choose **Camera** (phones and tablets) or **Handheld scanner**. Each scan is listed with a running total; tap **Done** when finished.
- If a scanned product also has a sub-unit, a message lets you switch to selling the smaller unit.
- Unknown barcode? You'll see "No product has the code …". Check the product's barcode in Stock.

The scanner window, handheld tab.

On a phone

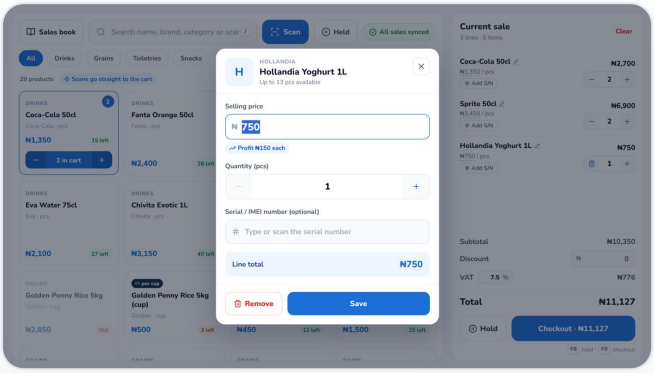

Phone: tap products, then tap the bar at the bottom to see the cart. On very small phones the search folds into a magnifier icon.

SECTION 4

Changing an item in the sale

Tap any item in the current sale to open it. A blue hint at the top of the cart reminds new users of this.

1. **Selling price:** type a new price for this sale only. The profit per item is shown underneath. Your product's normal price isn't changed.
2. **Quantity:** use **–** / **+** or type it. You can't go above the stock available.
3. **Unit:** if the product has a sub-unit, switch between them here.
4. **Serial / IMEI number:** type or scan one per item, separated by commas. They print on the receipt.
5. Tap **Save**, or **Remove** to take the item out of the sale.

> **Shortcuts in the cart:** the dashed price and the **Add S/N** chip on each line open the same window. The **bin** removes the line straight away.

Discount and VAT

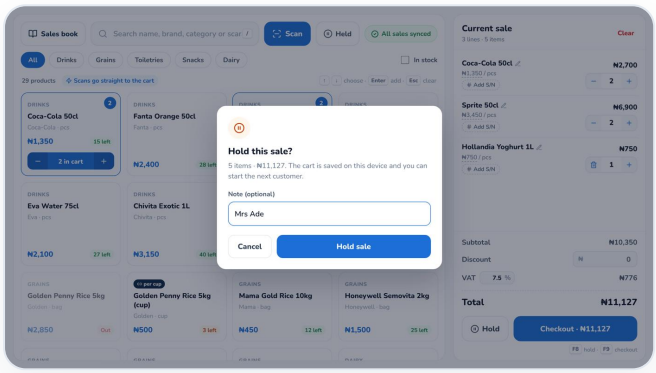

- **Discount** is an amount off the whole sale, typed under the subtotal.
- **VAT** shows when your store has VAT turned on. The rate can be changed for this sale.
- **Clear** (top of the cart) empties the sale after asking you to confirm.

SECTION 5

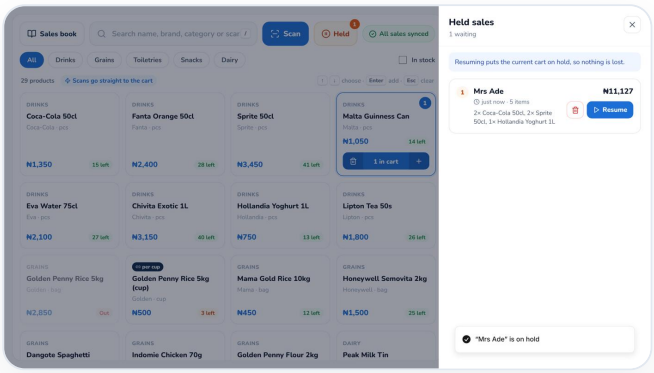

Holding a sale

A customer forgot their wallet, or wants to add more? Hold the sale and serve the next person.

1. Tap **Hold** under the total (or press **F8**).
2. Add a short note so you recognise it, for example the customer's name, then tap **Hold sale**.
3. The cart empties and you can start the next sale.
4. To continue it, tap **Held** at the top and choose **Resume**. If a sale is open when you resume, it's held first, so nothing is lost.

Holding a sale with a note.

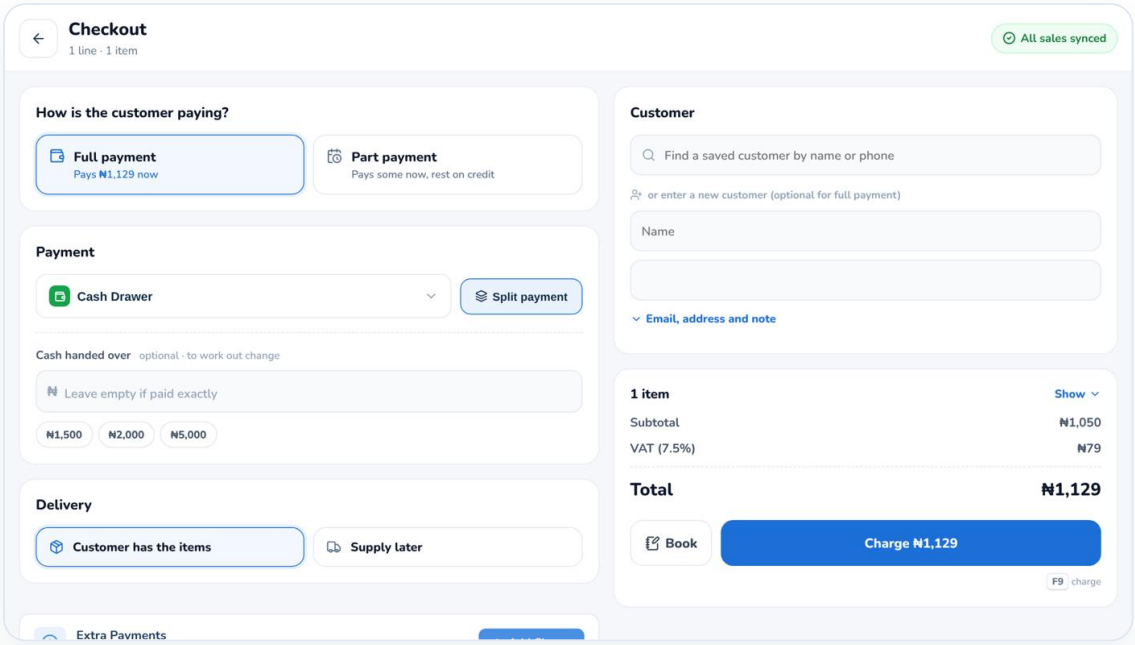

The Held sales list.

> **Held sales are saved on this device only.** They don't reduce stock and aren't sent to the server until you resume and complete them. Delete held sales you no longer need with the bin icon.

SECTION 6

Checkout and payment

Tap **Checkout** (or press F9). Everything about the payment is on one screen.

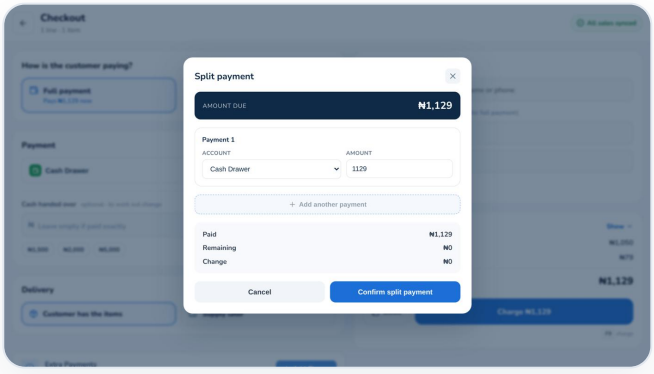

Checkout for a fully paid sale.

1. **How is the customer paying?** Choose **Full payment** or **Part payment** (credit, next page).
2. **Payment:** pick the account the money goes into: cash drawer, bank account or POS terminal. For a partner POS terminal (for example Kuda), the amount is sent to the terminal for the customer to pay.
3. **Cash handed over** (optional): type what the customer gave you, or tap a quick amount, to see their change. Leave it empty if they paid exactly.
4. **Customer** (optional for full payment): find a saved customer by name or phone, or type a new one. Walk-in customers don't need details.
5. **Delivery:** *Customer has the items*, or *Supply later* if they'll collect them.
6. Tap **Charge**. The sale is saved instantly, even offline.

Split payment

Tap **Split payment** to take the total in parts, for example some cash and the rest by transfer. Add a line for each account until *Remaining* reaches ₦0.

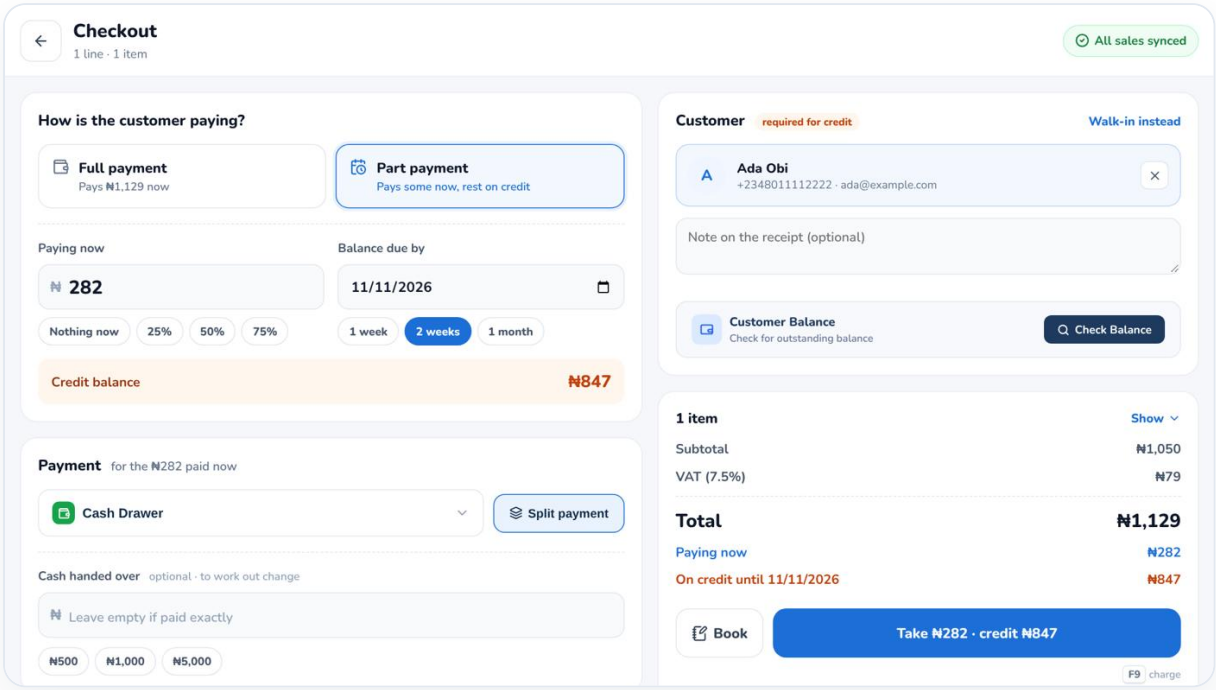

Customer balance: for a saved customer, tap **Check balance** to see any credit they owe from earlier sales. You can add it to this sale or clear it now. This step needs internet.

SECTION 7

Credit (part payment) sales

Use Part payment when the customer pays some now and the rest later.

A part payment: ₦282 now, the rest due in 2 weeks.

1. Choose **Part payment**.
2. **Paying now:** type the amount, or tap *Nothing now*, *25%*, *50%* or *75%*. It must be less than the total.
3. **Balance due by:** pick a date, or tap *1 week*, *2 weeks* or *1 month*. The date must be in the future.
4. **Customer is required** for credit, so you know who owes. Pick a saved customer or enter a name and phone number.
5. The button shows what you're taking now and how much goes on credit, for example *Take ₦282 · credit ₦847*.

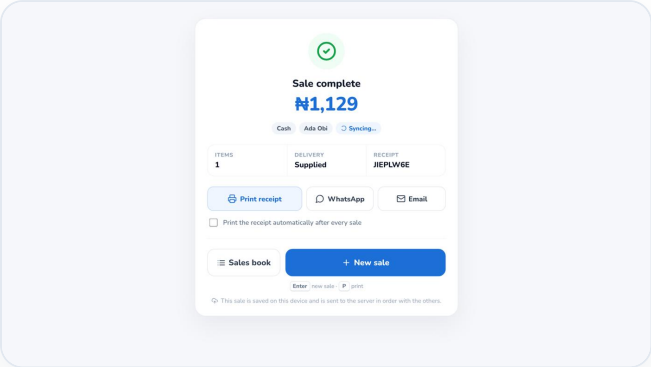

> **Reminders:** StoreLense reminds you when a credit balance is due. You'll find all unpaid credit under **Open credit** in the Sales book.

Booking an order instead

Tap **Book** on the checkout screen to send the customer a quotation by WhatsApp or email instead of selling now. Booked orders are under the **Booked orders** icon in the Sales book.

SECTION 8

After the sale: receipts

The success screen shows the total, payment, customer and receipt number.

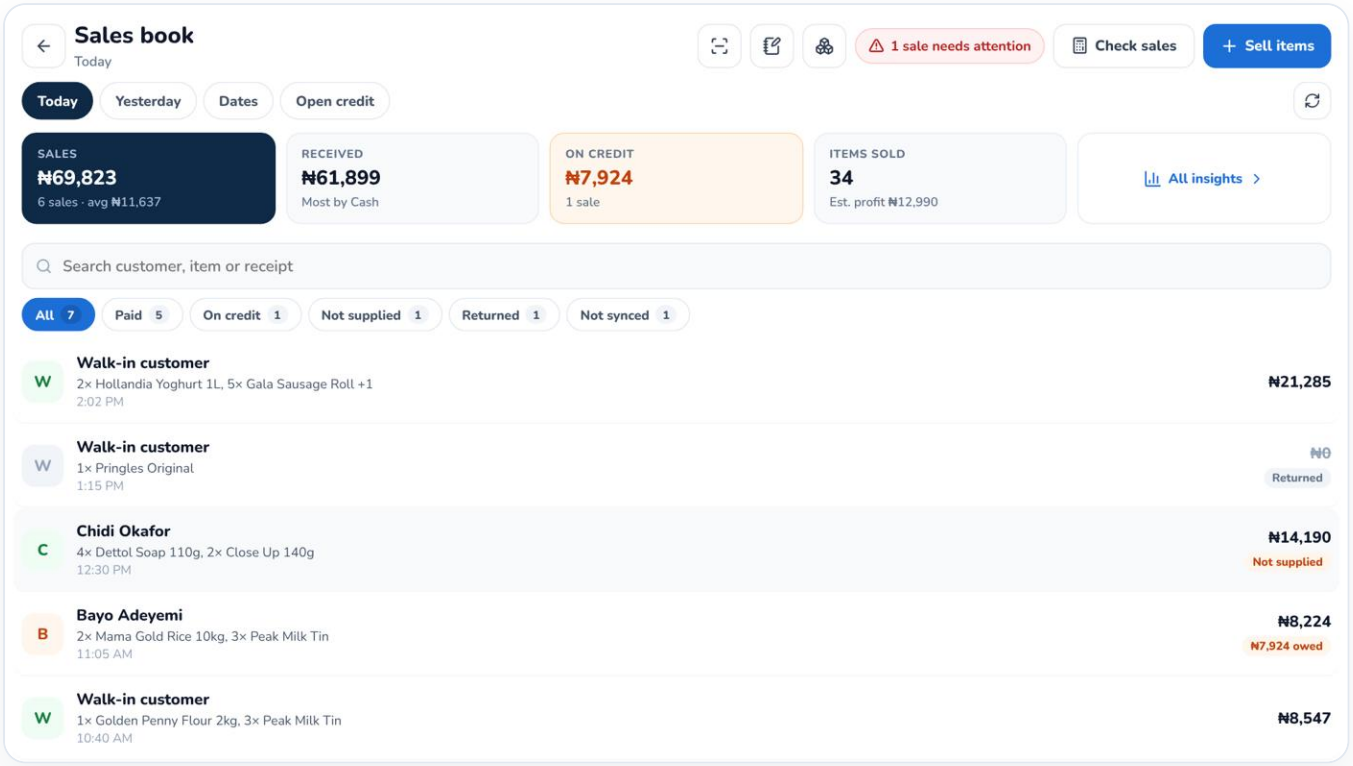

- **Print receipt** (or press **P**): prints an 80mm receipt with a QR code that finds the sale again later.
- Tick **Print the receipt automatically after every sale** to skip this step.
- **WhatsApp** sends the receipt to the customer's number.
- **Email** sends a PDF receipt to the customer's email.
- **New sale** (or **Enter**) starts the next sale. **Sales book** opens today's list.

> **"Syncing..."** under the amount means the sale is saved on this device and on its way to the server. You don't need to wait for it.

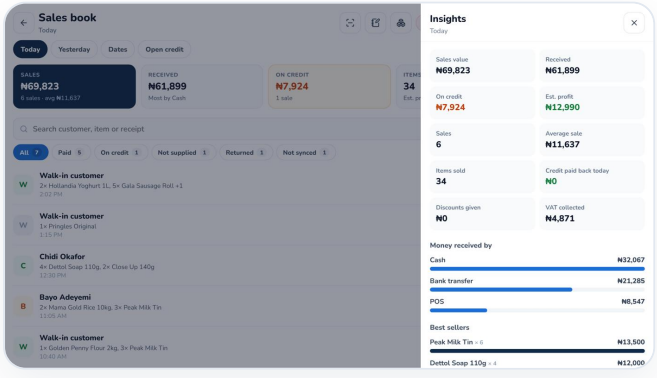

SECTION 9

The Sales book

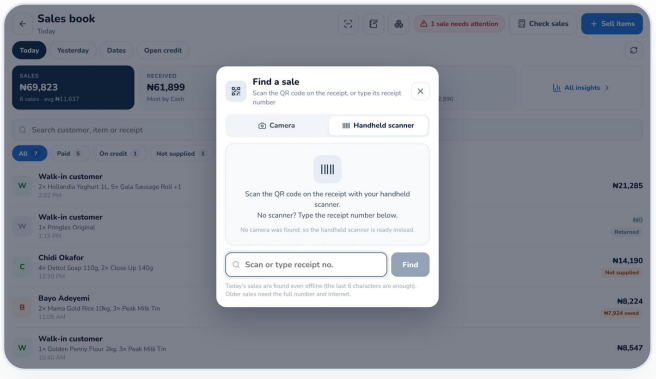

Tap **Sales book** on the Sales point. It replaces the old sales list.

- **Periods:** *Today*, *Yesterday*, *Dates* (any range) and *Open credit* (every unpaid balance).
- **Totals:** sales, money received, on credit and items sold. Tap **All insights** for profit, payment methods and best sellers.
- **Filters:** All, Paid, On credit, Not supplied, Returned, Not synced. **Search** by customer, item or receipt number.
- **Icons at the top: Find a sale** (scan a receipt's QR code or type its number), **Check stock**, and **Booked orders**.
- **Check sales** sends anything waiting first, then opens your end-of-day sales check. **Sell items** goes back to the Sales point.

Insights.

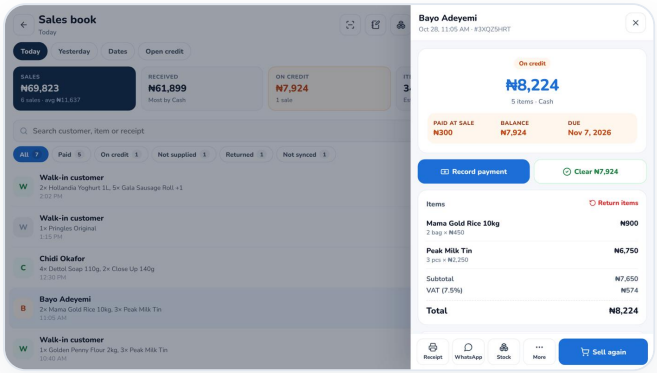

Find a sale from its receipt.

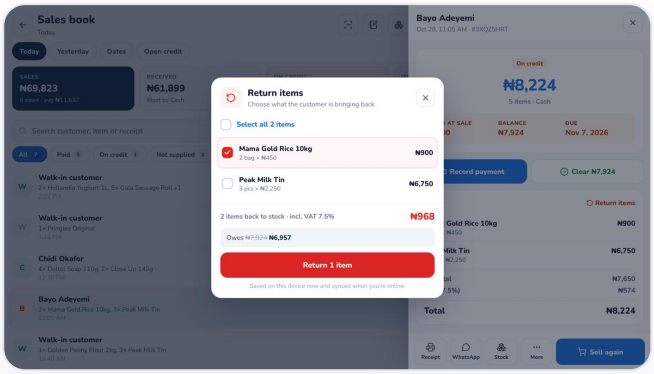

SECTION 10

Returns, payments and other changes

Tap any sale to open its details: items, payments, customer, who sold it, and actions.

A credit sale: paid at sale, balance and due date.

Returning one item from a credit sale.

Action	How
Record payment	Credit sales: enter what the customer paid now. The balance goes down.
Clear balance	Credit sales: the customer paid everything they owe.
Return items	Tick the items coming back, or *Select all*. They go back into stock. On a credit sale the screen shows the new balance and how much to give back, if anything.
Return all items	More menu (⋯). Cancels the whole sale and returns everything to stock.
Mark as supplied	More menu, for "Supply later" sales once the customer has the items.
Change due date	More menu, for credit sales.
Receipt · WhatsApp · Stock	Reprint or resend the receipt, or check stock for the items in this sale.
Sell again	Starts a new sale with the same items at today's prices and stock.

Returns can't be undone. Check the items with the customer before you confirm.

SECTION 11

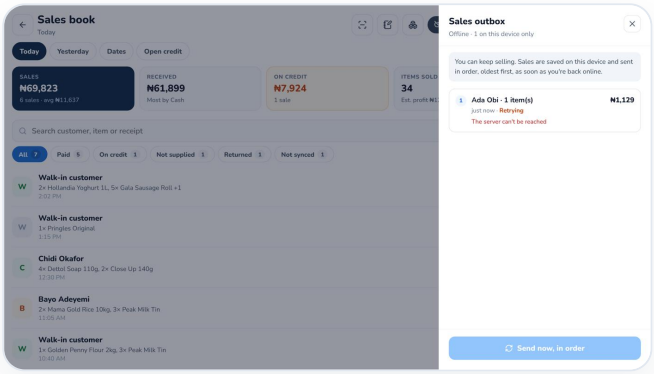

Working offline and syncing

You can keep selling when the internet is down. Every sale and change is saved on the device first, then sent to the server in order.

Sync pill	What it means
All sales synced	Everything has reached the server.
3 waiting to sync / Syncing...	Sales are on their way. Nothing to do.
Offline · 1 to sync	No internet. Keep selling; they'll send when you're back online.
1 sale needs attention	The server refused something, often not enough stock on the server. Open the panel to see why.

The Sales outbox

- Tap the sync pill to open it. It lists what's waiting, what was sent recently, and any problems.
- **Send now, in order** tries straight away. Otherwise it sends by itself every minute and when the connection comes back.
- For a sale that needs attention, read the message, then tap **Try again** once it's fixed.
- A sale is never sent twice, even if the connection drops in the middle.

Offline, with one sale waiting.

What needs internet

Opening a store for the first time on a device, checking or clearing a customer's earlier balance at checkout, emailing receipts, sales from earlier days and booking orders. Everything else works offline.

Signing out: StoreLense tries to send everything first. If anything is still waiting, it asks before signing out, and keeps those sales on the device until the next time a store is opened here online. Don't clear the browser's data while sales are waiting.

SECTION 12

Quick reference

Keyboard shortcuts

Key	Where	Does
/ or **F2**	Sales point	Jump to search
↑ ↓ then **Enter**	Sales point	Choose a search result and add it
Esc	Sales point	Clear the search, or close a window
F8	Sales point	Hold the sale (or open held sales when the cart is empty)
F9 or **Ctrl** + **Enter**	Sales point	Checkout
F9	Checkout	Charge
Enter / **P**	After the sale	New sale / print receipt

Common questions

Question	Answer
I can't add a product	It's out of stock, or you already have all of it in the sale. Restock it in Stock first.
The scanner adds nothing	Check the barcode on the product in Stock matches. Close any open window first; scanning pauses while one is open.
A customer wants to pay the rest of a credit sale	Sales book → Open credit → the sale → **Record payment** or **Clear**.
A sale says "Not synced"	It's saved on this device and waiting for internet. It sends by itself; tap the sync pill to send now.
I sold the wrong item	Open the sale → **Return items**, then sell the right one.
Employees: "You don't have permission to make sales"	Ask the owner to give your account permission to make sales. You can still use the Sales book.

Practice checklist

- [ ] Sell 3 items by tapping, 1 by search and 1 by scanning
- [ ] Change an item's price and add a serial number
- [ ] Hold a sale, serve another customer, then resume the first
- [ ] Take a split payment, and a part payment with a due date
- [ ] Print and WhatsApp a receipt
- [ ] Return one item from a sale, and record a payment on a credit sale
- [ ] Turn off Wi-Fi, make a sale, turn it back on and watch it sync
