20	Quick reference by role	62

Steps
Numbered blue circles are things to do, in order.

Tip · Note · Careful
Coloured boxes give shortcuts, background and things to watch out for.

Names in bold
Bold words are buttons, tabs and fields exactly as they appear on screen.

Screenshots use sample data. The Sales Point, payment, tables and venue profile screenshots are taken from the design, so a few details may look slightly different in your version of the app.

CHAPTER 01

Welcome to StoreLense Hospitality

One system to run your restaurants, bars and cafés: sales, tables, kitchen, stock, staff and online orders, with every naira and every plate accounted for.

What StoreLense Hospitality does

StoreLense Hospitality is the restaurant, bar and café edition of StoreLense, the Nigerian POS and inventory platform from Pragma Solutions Ltd. You can tell it apart from StoreLense for shops by the small **HOSPITALITY** label under the StoreLense name.

Area	What it does for you
Sales Point	Fast takeaway and delivery checkout with sizes, extras, discounts, VAT and receipts. Keeps selling when the internet drops.
Tables	A floor plan of your room. Open tables, take dine-in orders, move and merge tables, and take payment at the end.
Kitchen display	Orders appear on the kitchen, bar or café screen the moment they are sent, with a chime.
Inventory and recipes	Ingredients, stock levels, expiry dates, recipe costs and batch cooking.
Storage (warehouse)	Your store room. Move stock to venues and kitchens with a record of every move.
Online orders	Orders from your website arrive with a sound and are tracked until delivered.
Staff	Own logins for every staff member, with roles, privileges and an activity history.
Dashboard and analytics	Sales, profit, food cost, busiest hours, forecasts and loan-ready reports.

The words you'll see

A few ideas come up on almost every screen. It helps to know them before you start.

Word	Meaning
Owner	The person who created the StoreLense account. The owner can see and do everything.

Word	Meaning
Venue	A place that sells: a restaurant, bar or café. Each venue has its own menu, tables, Sales Point and receipts.
Kitchen (station)	Where food and drinks are prepared. Kitchens, bars and cafés can all receive tickets on their own screen.
Storage / warehouse	A store room. Stock here isn't sold or cooked directly: it is moved to venues and kitchens.
Menu item	Something you sell. It can be made to order, made in batches, or stocked (counted units such as bottles).
Ingredient	Something the kitchen uses to make menu items, kept in the kitchen's inventory.
Staff member	Someone you add on the Staff page. They sign in with their own username and password.
Privilege	Permission to use a part of the app, such as POS sales, refunds or the kitchen display.

Devices

StoreLense runs in any modern web browser on Windows, macOS, Android and iOS, and as a mobile app for iOS and Android. Every screen in this manual adapts to phones, tablets and laptops. StoreLense POS devices and standard 80mm receipt printers are supported.

> **TIP** On phones, many screens tuck filters, insights and extra panels behind a button that slides up from the bottom. If you can't see something shown in a desktop screenshot, look for that button.

Who should read what

Role	Read these chapters
Owner / manager	All of them. Start with chapters 2 to 6.
Cashier	3 Finding your way around, 7 Sales Point, 14 Transactions, 15 Refunds, 17 Offline.
Waiter	3, 7 Sales Point, 8 Tables and dine-in, 17 Offline.
Bartender	3, 7, 8, 9 Kitchen display.
Chef / kitchen assistant	3, 9 Kitchen display, 10 Kitchen inventory, 11 Menu prep and batches.
Storekeeper	3, 10 Kitchen inventory, 12 Storage.

CHAPTER 02

Getting started

Open your account, verify your phone, choose a plan and sign in. This chapter is for the business owner.

The welcome screen

Go to the StoreLense Hospitality home page. You'll see the welcome screen with two ways in: **Create free account** for new businesses and **Log in** if you already have an account. Staff use **Staff sign-in** at the top right.

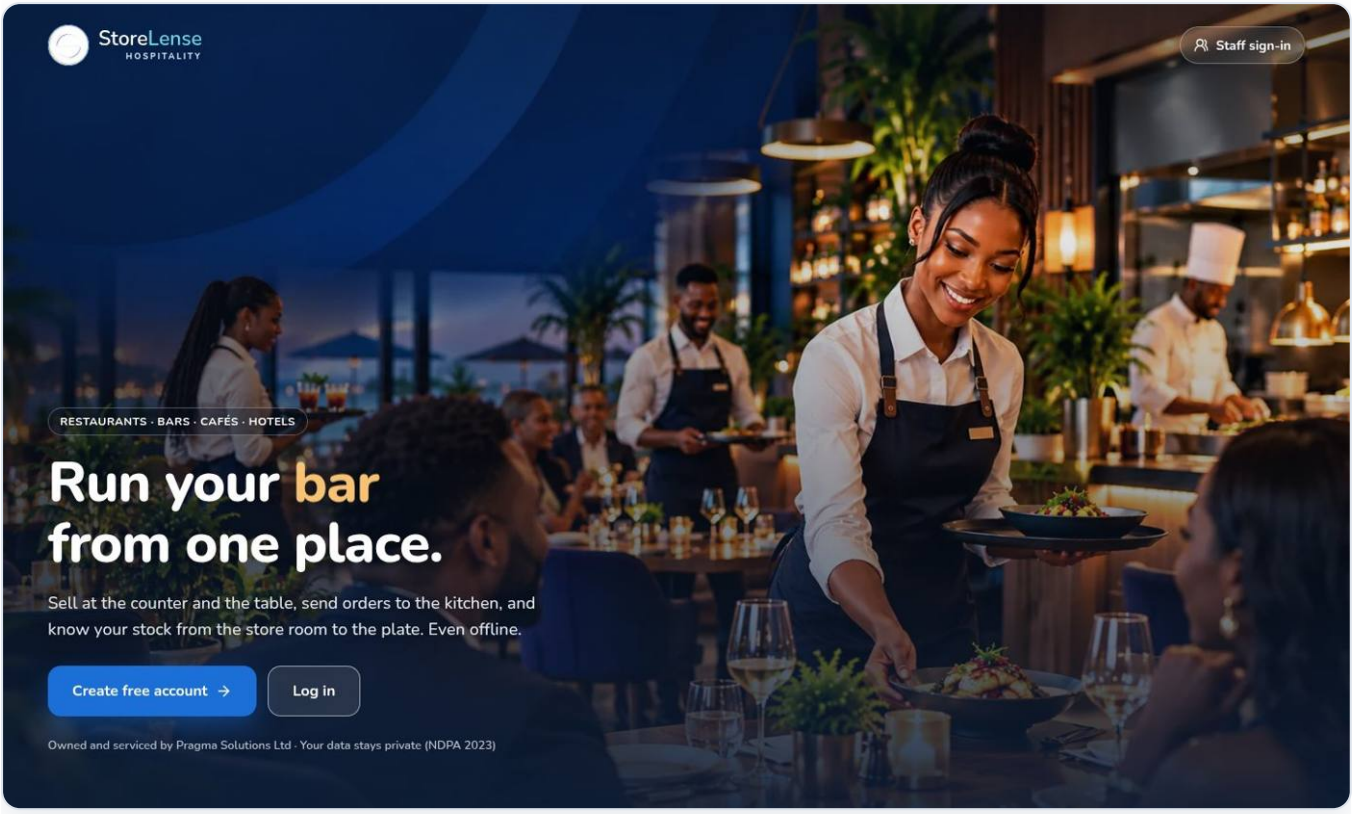

Figure 2.1 The welcome screen. If you are already signed in on this device, a Go to my venues button also appears.

Create your account

1. On the welcome screen, tap **Create free account**.
2. Enter your full name, your business email address and a password. The password needs 6 to 20 characters, with a number, an uppercase letter and a lowercase letter. Each rule ticks green as you type.
3. Read the Terms of Service and Privacy Policy, then tap **Create account**.
4. If someone referred you, open their referral link first: the referral is recorded automatically.

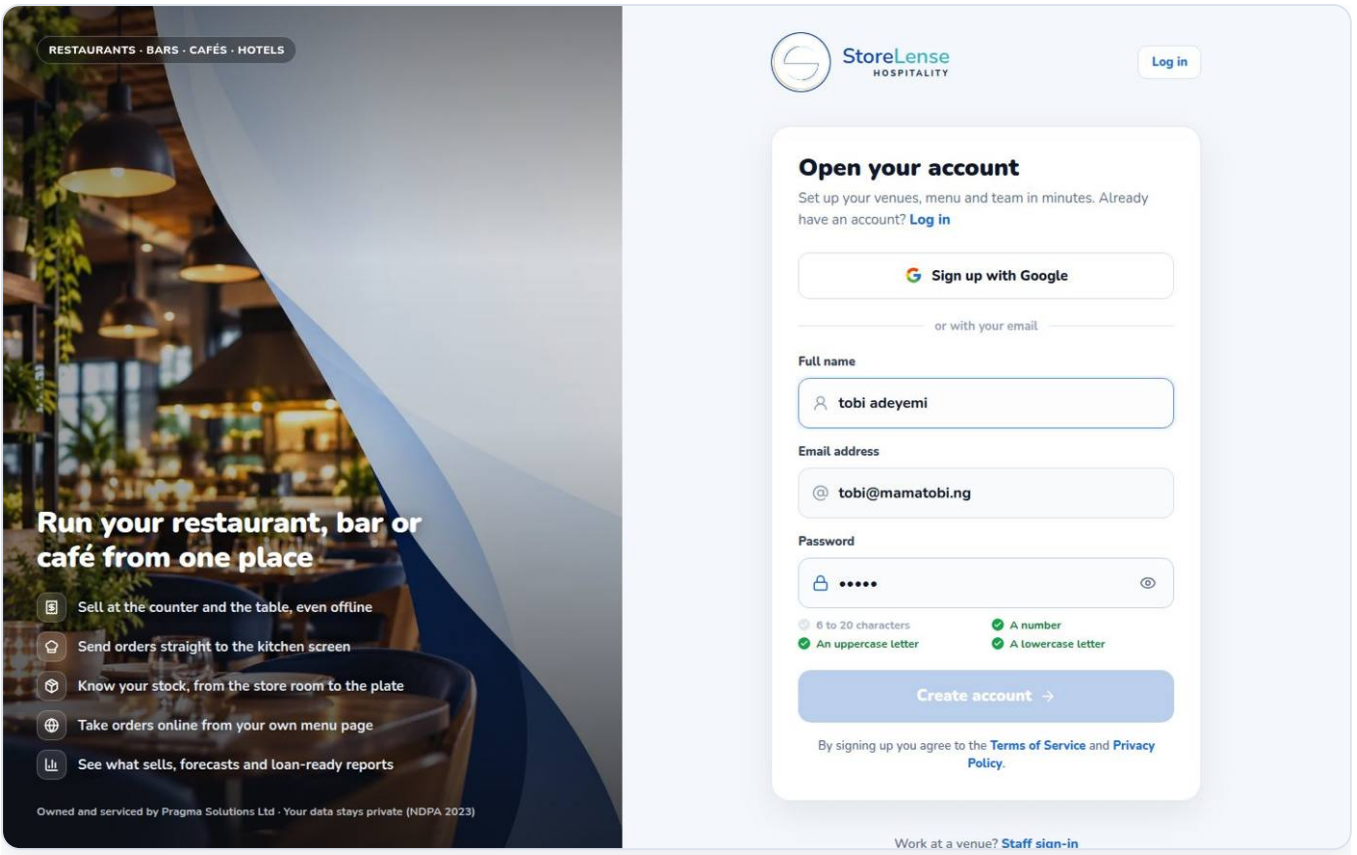

Figure 2.2 Create your account. The restaurant photo and the list of features show on wide screens; on phones you see the form only.

Verify your phone number

1. Straight after creating your account, enter the phone number customers and staff can reach you on. Your country is picked for you.
2. Tap **Send code**. A 5-digit code arrives by text message.
3. Type or paste the code. On most phones the code fills in by itself. It is checked as soon as the last digit is in.
4. Didn't get it? Wait for the 30-second timer, then tap **Resend code**. Tap **Change number** if you typed the wrong one.

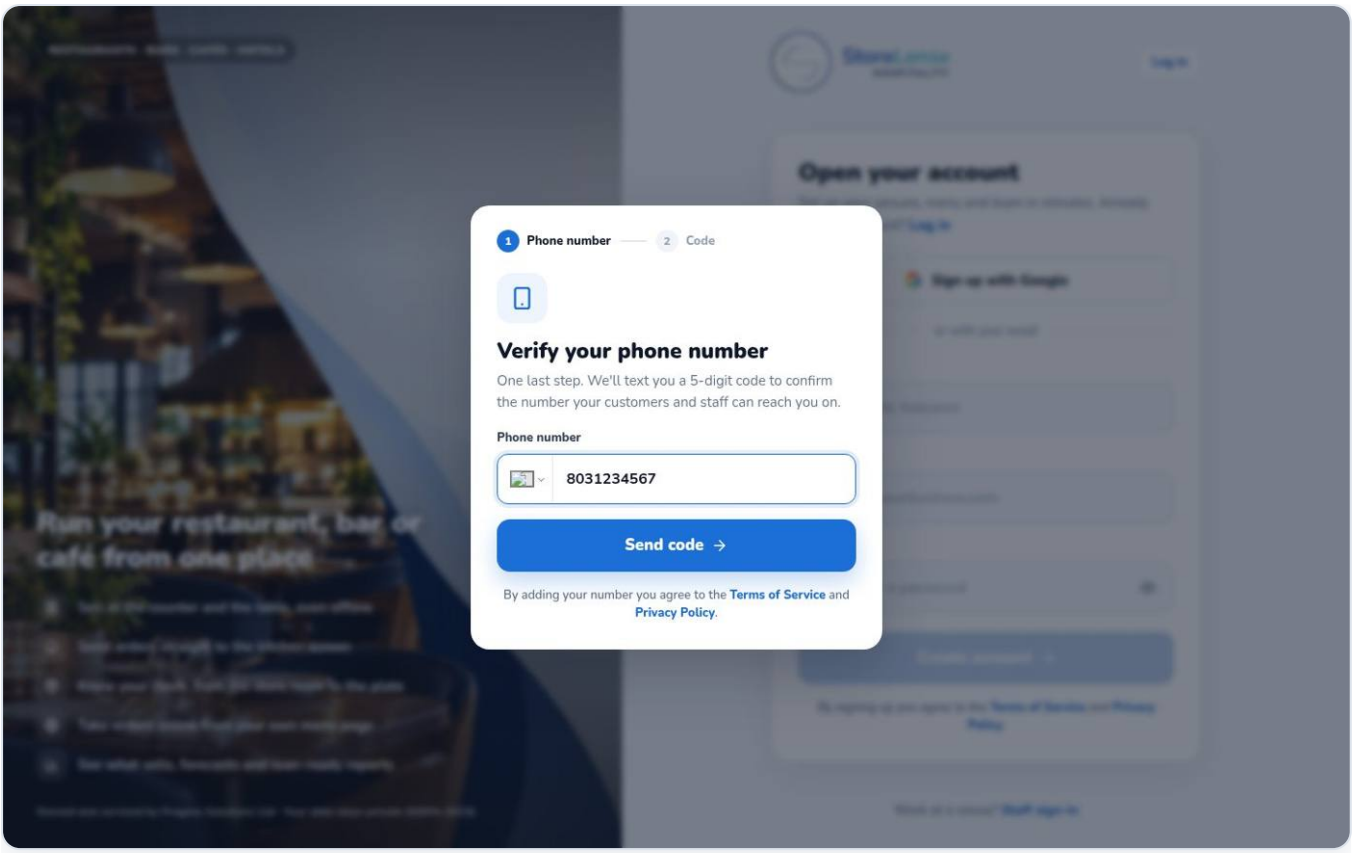

Figure 2.3 Step 1 of 2: your phone number. Step 2 is the 5-digit code.

Choose your business type

Next, choose what you run: **Restaurant**, **Bar**, **Café** or **Hotel**. This sets up sensible defaults for your account, such as the modules shown and the venue types you can create. You can still create other venue types later.

Choose a plan or start free

To create venues and manage stock you need a plan. Pick **Monthly** or **Every 6 months** (cheaper per month), then tap **Choose plan** on Basic, Super or Premium. Payment opens securely in Paystack. You can also start on the **Free plan**, or take a 7-day free trial if you haven't used one.

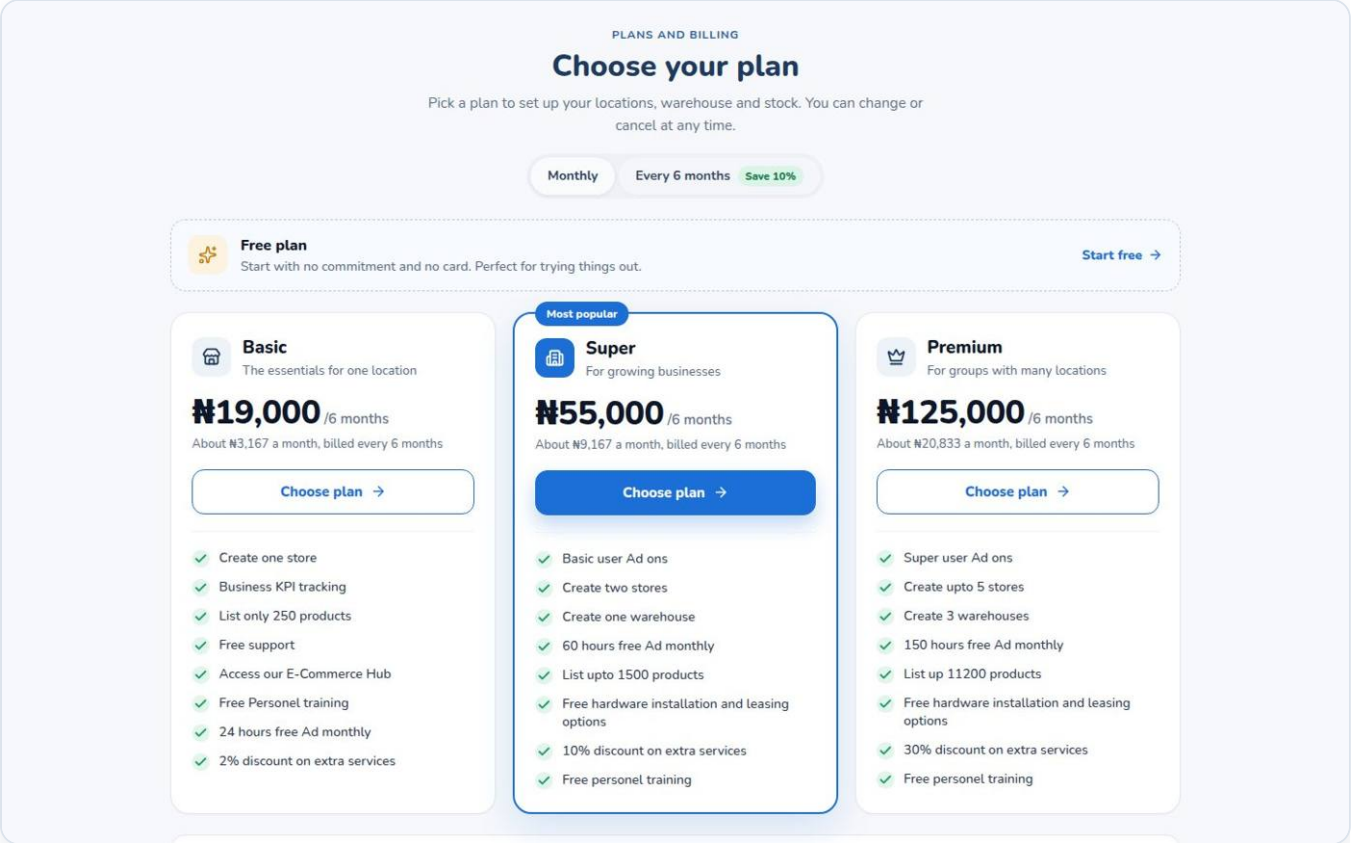

Figure 2.4 Plans and billing. The most popular plan is highlighted. Prices shown are examples and may change.

During a free trial, **Settings › Subscription** shows how many days are left, with a bar that fills as the trial goes on. It turns amber with 2 days or fewer left. Choose a plan before it ends to keep your venues, menu and sales history running.

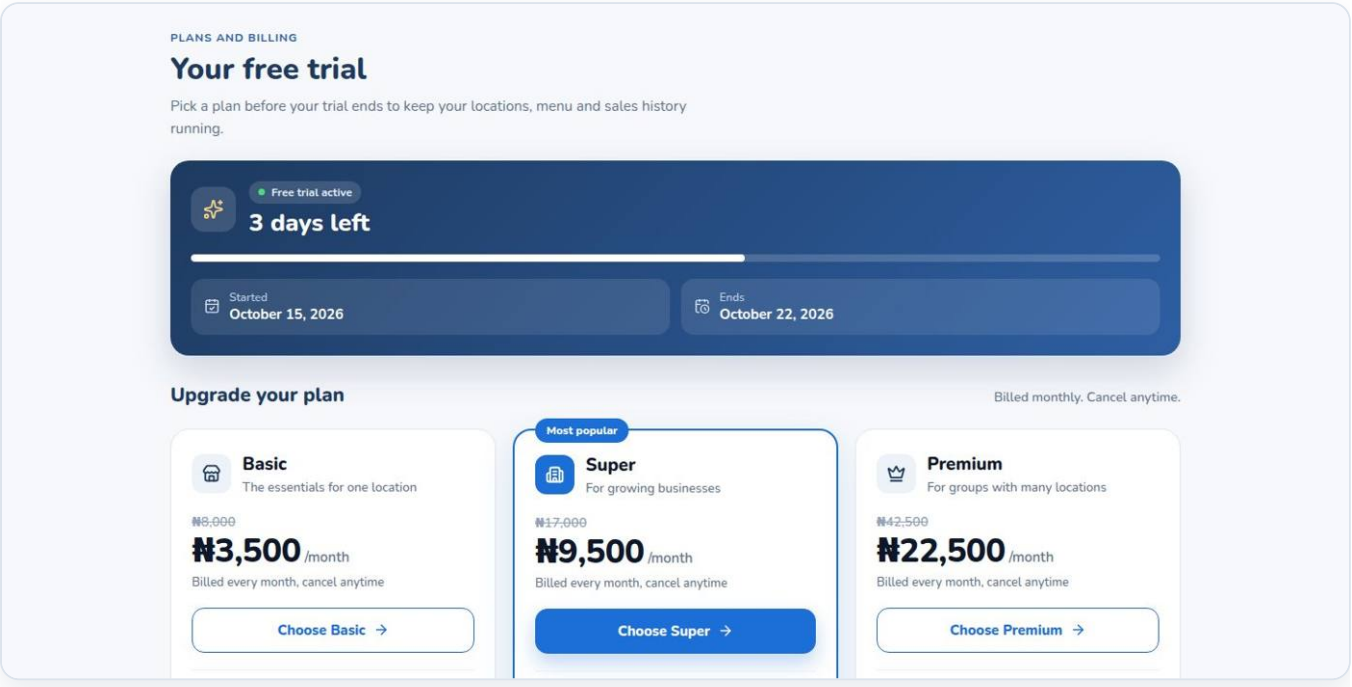

Figure 2.5 Your free trial: days left, start and end dates, and the plans to upgrade to.

Sign in

1. On the welcome screen, tap **Log in**.

2. Enter your email address and password, then tap **Sign in** or press Enter.
3. Forgot your password? Tap **Forgot password?** next to the Password label and follow the email.

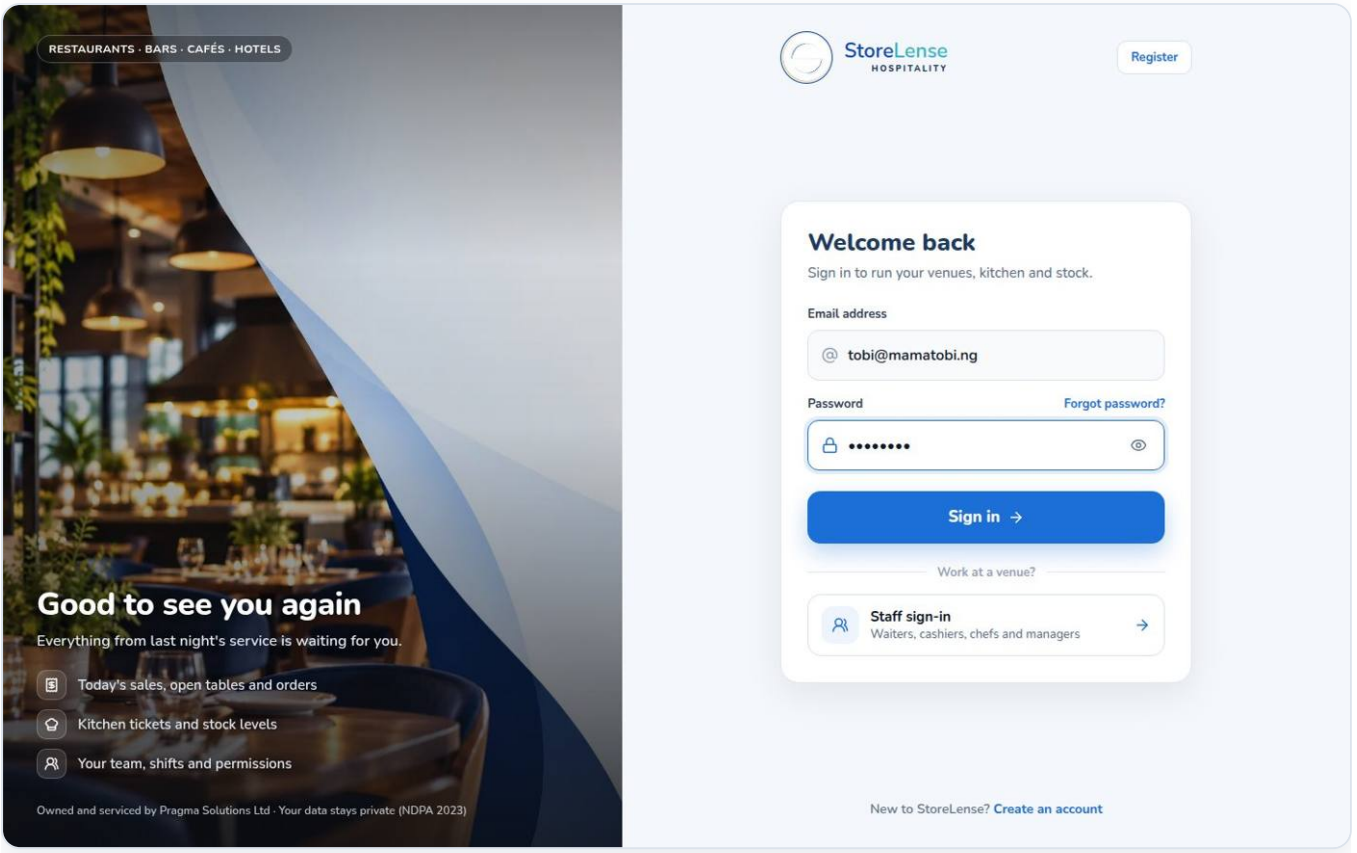

Figure 2.6 Owner sign-in. Staff tap Staff sign-in under the form instead.

> **CAREFUL** The owner account can do everything, including refunds, staff changes and closing venues. Don't share it. Give every staff member their own login instead (chapter 6).

CHAPTER 03

Finding your way around

The side menu, the top bar and the sync indicator are the same on every page.

The side menu

On laptops and wide tablets, the navy side menu is always on the left. The page you are on is lit white. On phones and smaller tablets, tap the menu button (three lines) at the top left to slide it in, and tap outside it to close it.

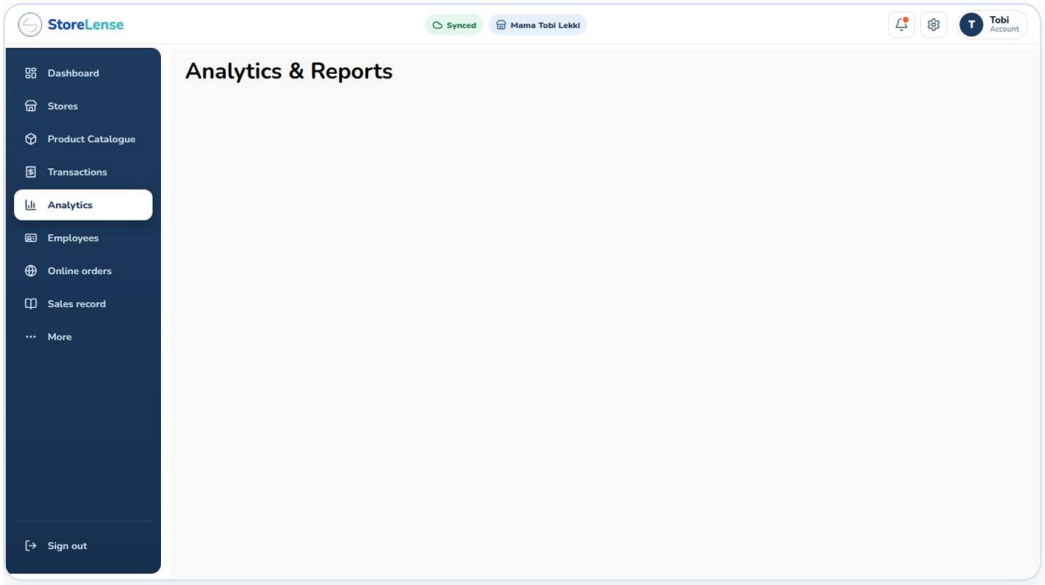

Figure 3.1 The side menu on a laptop.

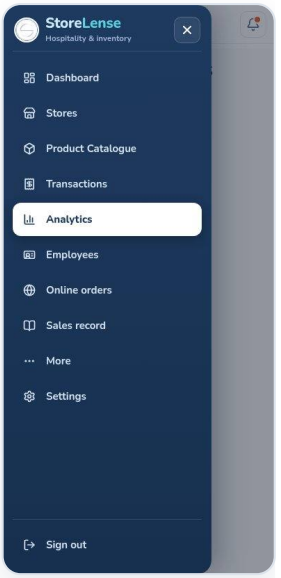

Figure 3.2 The same menu on a phone.

Menu item	What you'll find there
Dashboard	Today's sales, orders, payments and alerts across your venues.
Stores	Your venues, kitchens and storage. Open a venue to sell, run tables and manage its menu.
Product Catalogue	Every menu item, ingredient and stored item across all your places.
Transactions	Every sale, from every venue and channel, with receipts.
Analytics	Reports, trends, forecasts and downloadable PDF and Excel reports.
Employees	Your staff, their roles, privileges and activity.
Online orders	Orders from your website, from pending to delivered.

Menu item	What you'll find there
Sales record	Your sales records.
Settings	Profile, password, subscription, referrals, help and privacy. On wide screens it's the gear icon in the top bar.

> **NOTE** Staff only see the menu items their privileges allow. For example, a waiter won't see Analytics or Employees.

The top bar

The top bar shows the sync indicator, the venue you have open, notifications (the bell), settings (the gear) and your profile.

The sync indicator

StoreLense saves every sale on the device first, then sends it to the server. The chip in the top bar tells you how that's going, worst state first:

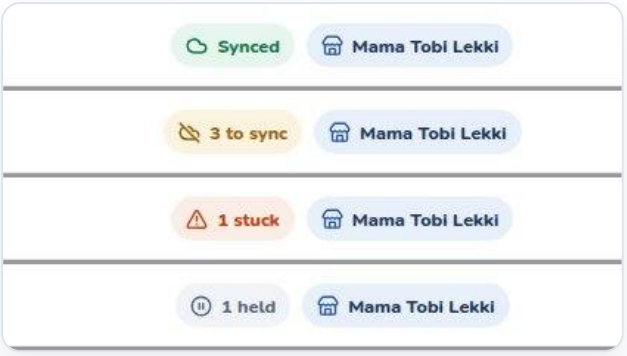

Figure 3.3 Synced, waiting to sync, stuck and held.

Chip	Meaning	What to do
Syncing…	Offline sales are being sent now.	Nothing. Keep working.
1 stuck (red)	A record failed 5 times and is holding up the rest.	Open the venue's Offline queue and retry or remove it (chapter 17).
Offline · 3 waiting	No connection. Sales are saved on this device.	Keep selling. They send when the connection is back.
3 to sync	Online, with records waiting to be sent.	Nothing. They are on their way.
1 held	A record was set aside on this device.	Send it from the Offline queue when you're ready.

Chip	Meaning	What to do
Synced (green)	Everything has reached the server.	Nothing.

Your profile

The owner's profile button opens **Settings › Profile**. When a staff member is signed in, it shows their photo (or initials), first name and role. Tapping it opens their details: role, staff code, contact, shift, where they work and what they can do, with a **Sign out** button.

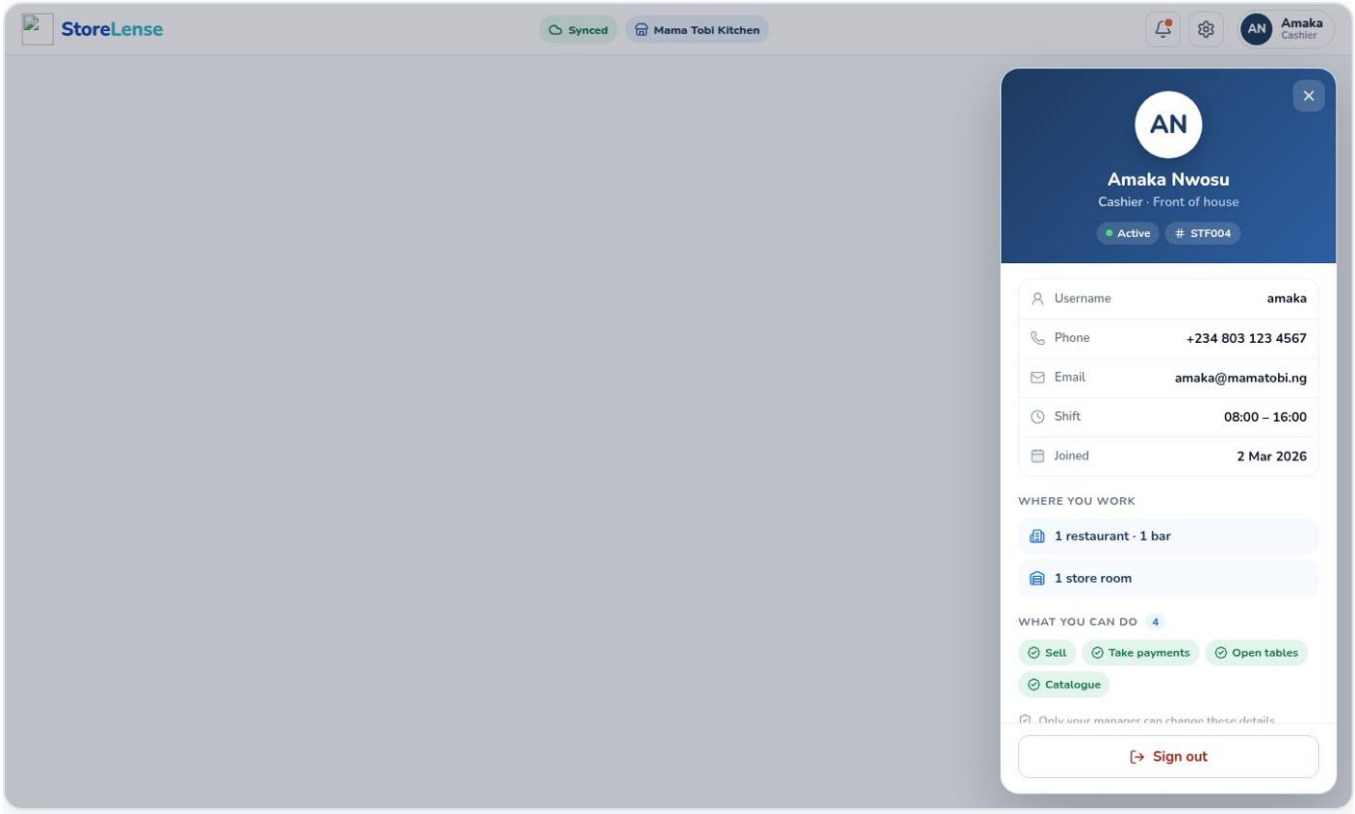

Figure 3.4 A staff member's details, opened from the profile button. On phones it slides up from the bottom.

Signing out

Use **Sign out** at the bottom of the side menu (or in the staff details card). If sales are still waiting to sync, StoreLense sends them first, then signs you out. For safety, StoreLense also signs out a device that hasn't been used for a long time.

> **CAREFUL** Don't clear the browser's data or uninstall the app while the sync chip shows waiting or stuck records: those sales are only on that device until they sync.

CHAPTER 04

Setting up your business

Create your venues, kitchens and storage, then fill in each venue's profile.

Create venues, kitchens and storage

Open **Stores** and tap the button to add a location. The window has three tabs:

Tab	What you fill in
Venue	Choose the type (Restaurant, Bar, Café, or Hotel where enabled), then the name and address. Upload your logo, or let StoreLense generate one with AI.
Kitchen	A name and address. Kitchens, bars and cafés receive tickets on their own screen.
Storage	A name and address for a store room or warehouse.

> **TIP** Create one kitchen for each screen your team cooks from, for example Main Kitchen and Pastry Kitchen. A bar that makes drinks to order can be its own station.

The venue profile

Open a venue from **Stores** to see its profile: logo, address, followers, tables and employees, plus everything customers see.

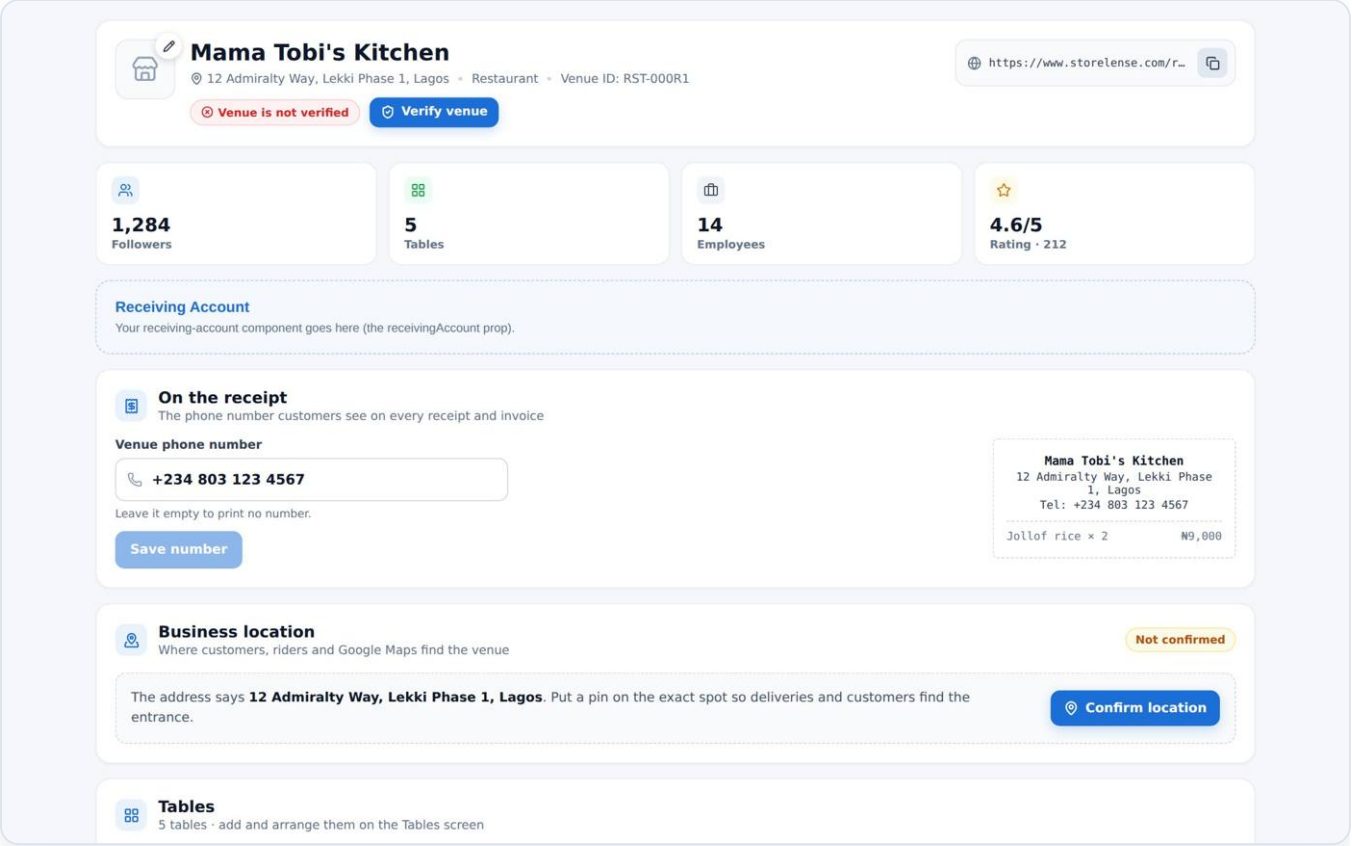

Figure 4.1 A venue profile: verification, receipt details, location, tables, opening hours and the offline queue.

Verify your venue

Tap **Verify venue** and follow the steps. Verification usually takes 1 to 2 working days, and you'll be notified when it's done. The badge shows Not verified, Verification pending, Verified or Declined.

What prints on receipts

Under **On the receipt**, enter the phone number customers see on every receipt and invoice, then tap **Save number**. Leave it empty to print no number. The preview shows how the top of the receipt will look. Your venue logo also prints, small, next to the venue name.

Business location

Tap **Confirm location**, search for the address or use your current location, and drag the pin to the exact entrance. Customers and riders use this for deliveries and pickups.

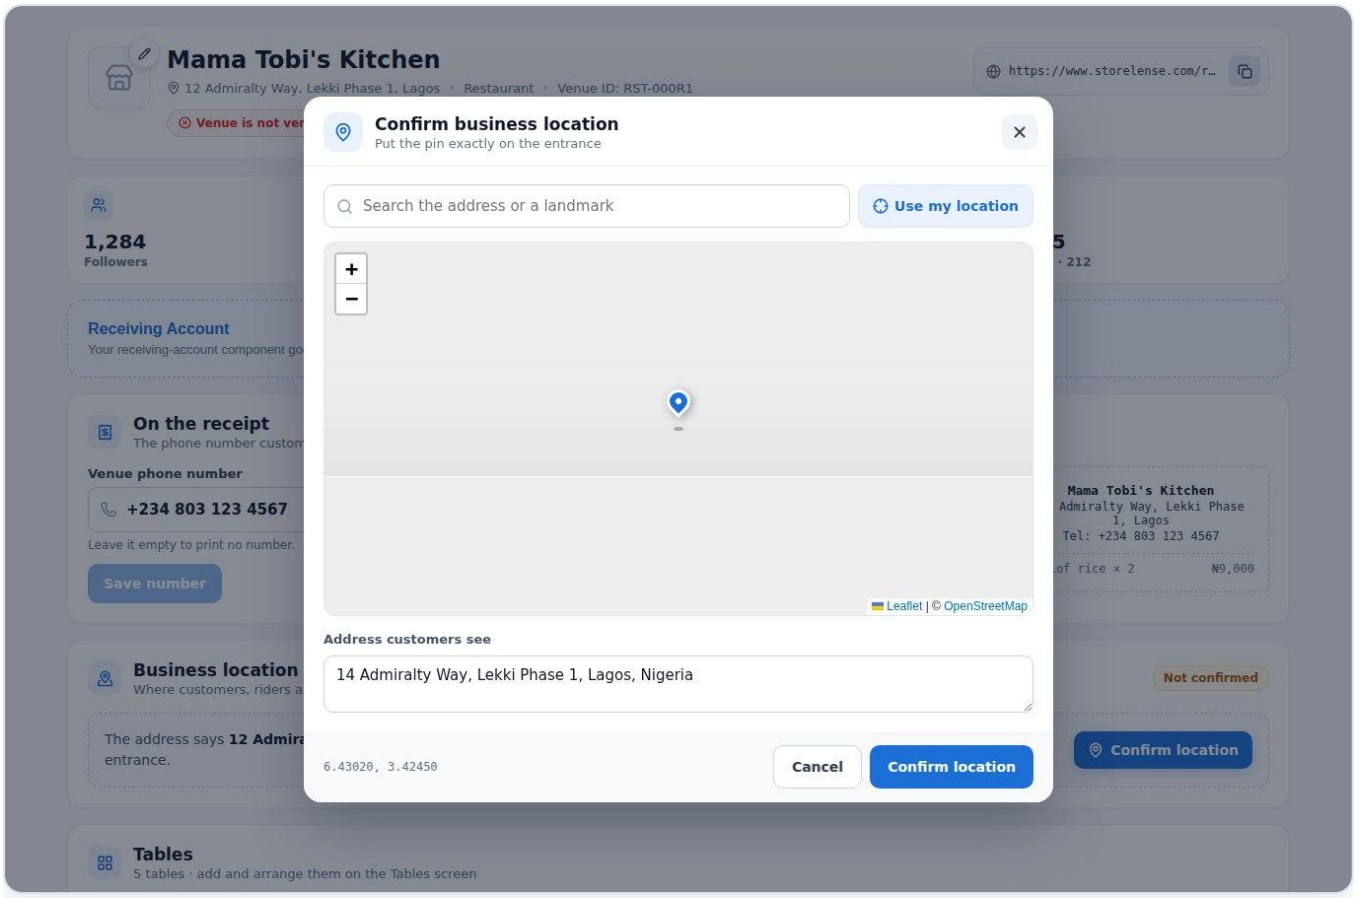

Figure 4.2 Confirming the business location on the map.

Opening hours

Tap **Update opening hours**. Turn each day on or off and set the open and close times. Use **Use Monday's hours for every day** to save time. Hours that run past midnight are marked as closing after midnight.

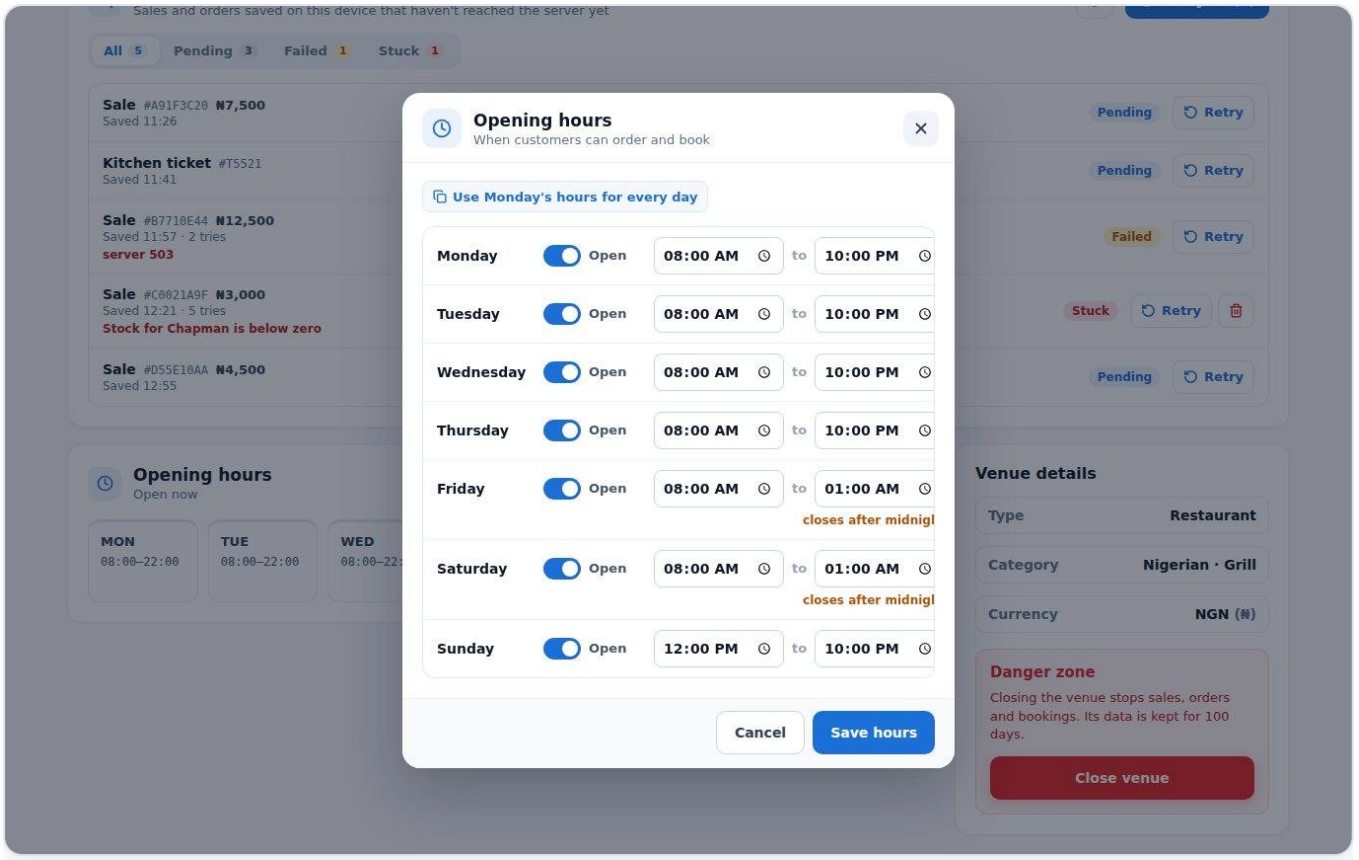

Figure 4.3 Setting opening hours for each day.

Closing a venue

The **Danger zone** at the bottom lets you close a venue. Closing stops sales, orders and bookings and hides the venue from your public page. Its data is kept for 100 days.

CHAPTER 05

Menu and catalogue

Each venue has its own menu. The Product Catalogue shows everything you sell and stock, everywhere, in one place.

How a menu item is stocked

Every menu item has a **stock mode**. It decides how the Sales Point counts it:

Stock mode	Use it for	How it behaves
Made to order	Dishes cooked when ordered, such as jollof rice or grilled fish.	No count. Sent to a kitchen, bar or café when sold. A recipe can take ingredients from the kitchen's stock.
Batch	Food the kitchen prepares in advance, such as pepper soup or moi moi.	Shows portions left and sells down to zero. The kitchen adds portions with Make a batch.
Stocked	Counted units, such as bottles of Coke or takeaway packs.	Shows units left and blocks the sale at zero. Restocked from storage or deliveries.

Sizes and extras

- **Variants** are sizes or portions sold at different prices, such as Regular and Large. A variant replaces the price; the cashier picks exactly one.
- **Modifiers** are extras added on top, such as Extra dodo +₦800 or No pepper. The cashier can pick any number; required ones are always included.

Open a menu item to see its price, cost and margin, how many sold today and all time, sales by month, and its full history: sales, refunds, batches, price changes and more.

The Product Catalogue

Open **Product Catalogue** from the side menu to browse every menu item, kitchen ingredient and stored item across all your venues, kitchens and storage.

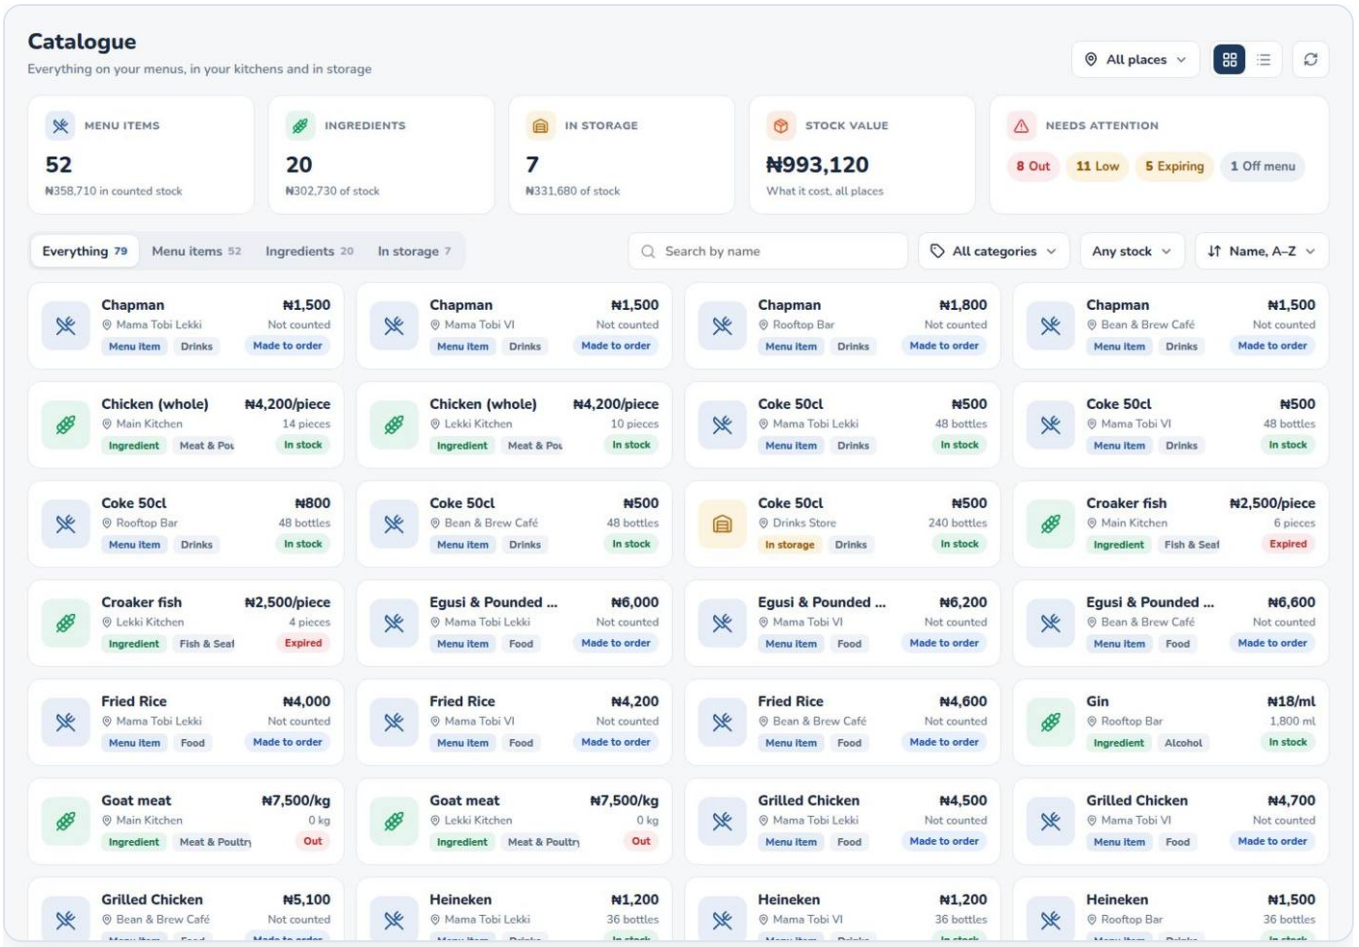

Figure 5.1 The catalogue, with totals at the top and filters for type, place, category and stock.

1. Use the tabs to switch between Everything, Menu items, Ingredients and In storage.
2. Filter by place, category or stock level (for example Low or Out of stock), or search by name.
3. Switch between card and table view with the buttons at the top right.
4. Tap an item to open its details, including every other place that keeps it.

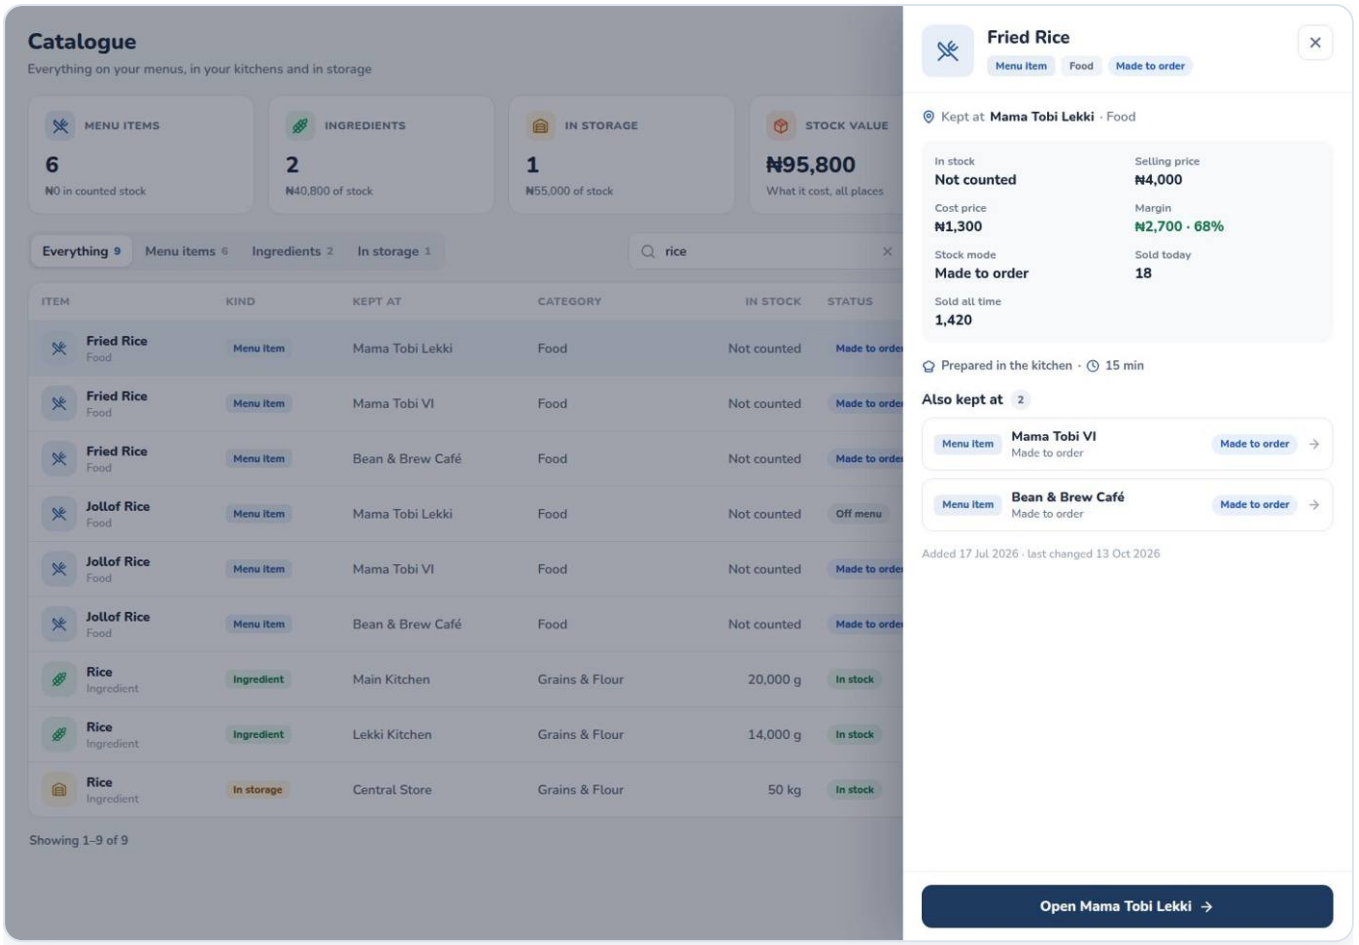

Figure 5.2 An item's details in the catalogue, with a button to open the place that keeps it.

> **NOTE** Staff see the catalogue only if they have the Catalogue privilege, and only for the places they work at.

CHAPTER 06

Staff and access

Give every staff member their own login. Choose their role, where they work and exactly what they can do.

The Staff page

Open **Employees** from the side menu. You'll see how many staff you have, how many are active, on leave, and by role, with the full list below. Search by name, role, phone or staff code, and filter by role or status.

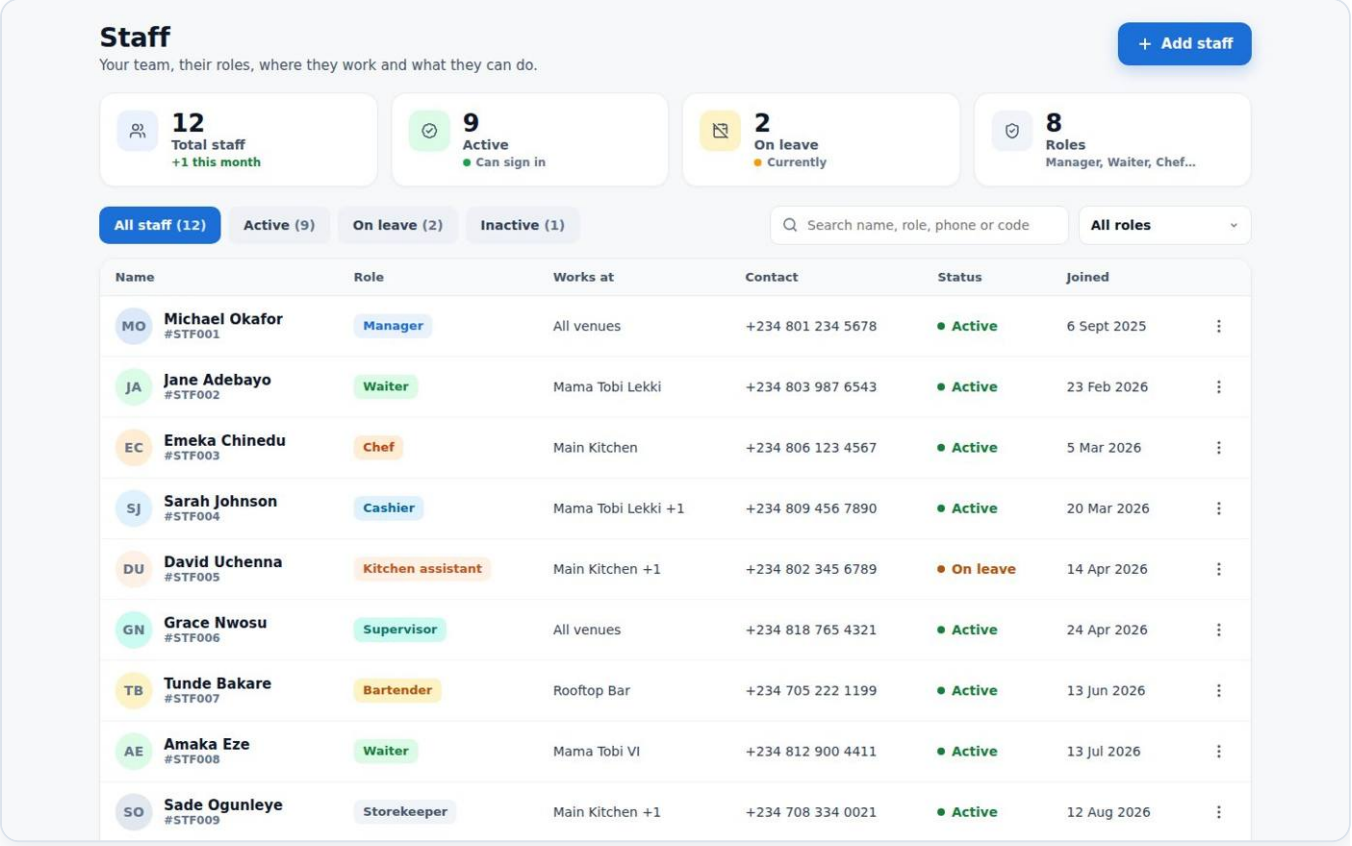

Figure 6.1 The Staff page.

Roles and what they can do

A role sets the department and sensible starting privileges. You can change any privilege for any person.

Role	Works at	Starts with
Manager	All venues	Everything.
Supervisor	All venues	Everything except managing staff.
Cashier	Venue	POS sales, discounts, table access, menu access.

Role	Works at	Starts with
Waiter	Venue	POS sales, table access, menu access.
Bartender	Venue	POS sales, table access, menu access, kitchen display.
Chef	Kitchen	Menu access, kitchen display, inventory, catalogue.
Kitchen assistant	Kitchen	Menu access, kitchen display.
Storekeeper	Storage	Menu access, warehouse, inventory, catalogue.

All privileges

Group	Privilege	Allows
Sales	POS sales	Sell at the Sales Point.
	Discounts	Take money off a sale and apply coupons.
	Refunds & voids	Undo a paid sale.
	Online orders	Accept, send to the kitchen and deliver website orders.
Tables	Table access	Open tables and take table orders.
	Manage tables	Add, move and delete tables.
Menu	Menu access	See the menu, prices and stock.
	Create menu / Edit menu	Add new items; change prices, stock and items.
Stock	Kitchen display	Tickets, batches and batch requests.
	Inventory	Kitchen ingredients and stock counts.
	Warehouse	Warehouse stock and moves.
	Catalogue	See menu items, kitchen stock and storage at their places.
Admin	Reports	Sales and stock reports, analytics.
	Manage staff	Add and edit other staff.

Add a staff member

1. On the Staff page, tap **Add staff**.

2. **Staff type:** choose the role.
3. **Details:** enter their name, phone, email (optional), employment type, pay and shift times.
4. **Where they work:** tick their venues, kitchens and storage, or turn on **Every venue**.
5. **Privileges:** check the switches. Use **Turn all on** per group, or go back to the role's defaults.
6. Tap **Add staff**. Their username and a password are shown once: tap **Copy both** and give them to the staff member.

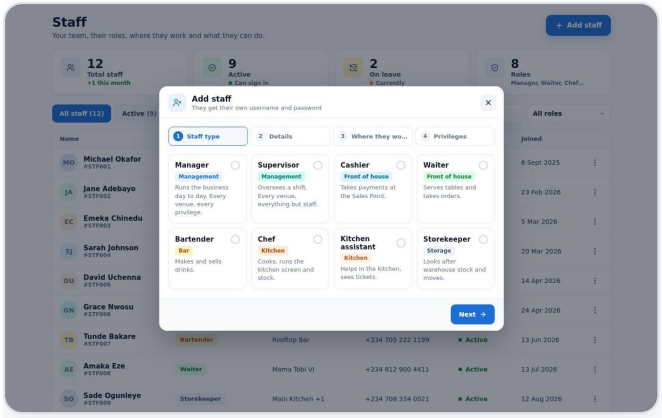

Figure 6.2 Step 1: choose the role.

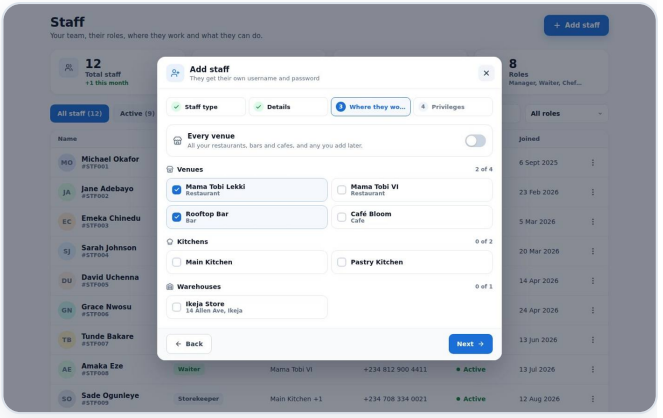

Figure 6.3 Step 3: where they work.

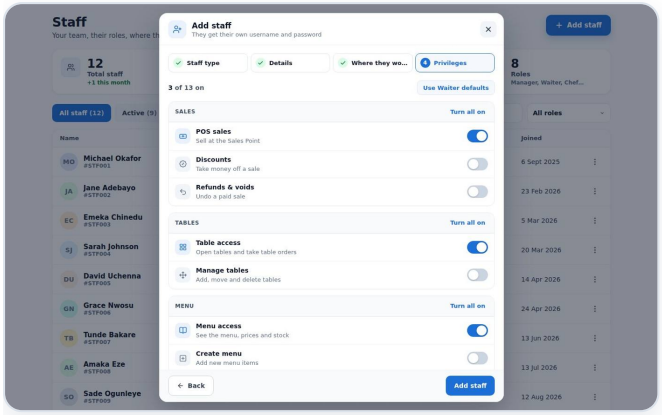

Figure 6.4 Step 4: privileges.

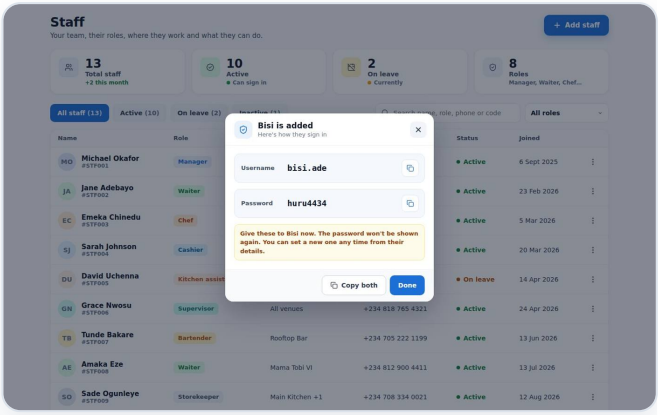

Figure 6.5 Done: their username and password.

> **CAREFUL** The password is only shown once. If it's lost, open the staff member and set a new one.

Look after a staff member

Tap a staff member to open their details. The **Overview** tab shows personal and work information, **Access** shows their places and privileges, and **Activity** lists everything they did: sales, refunds, table changes, menu edits and moves.

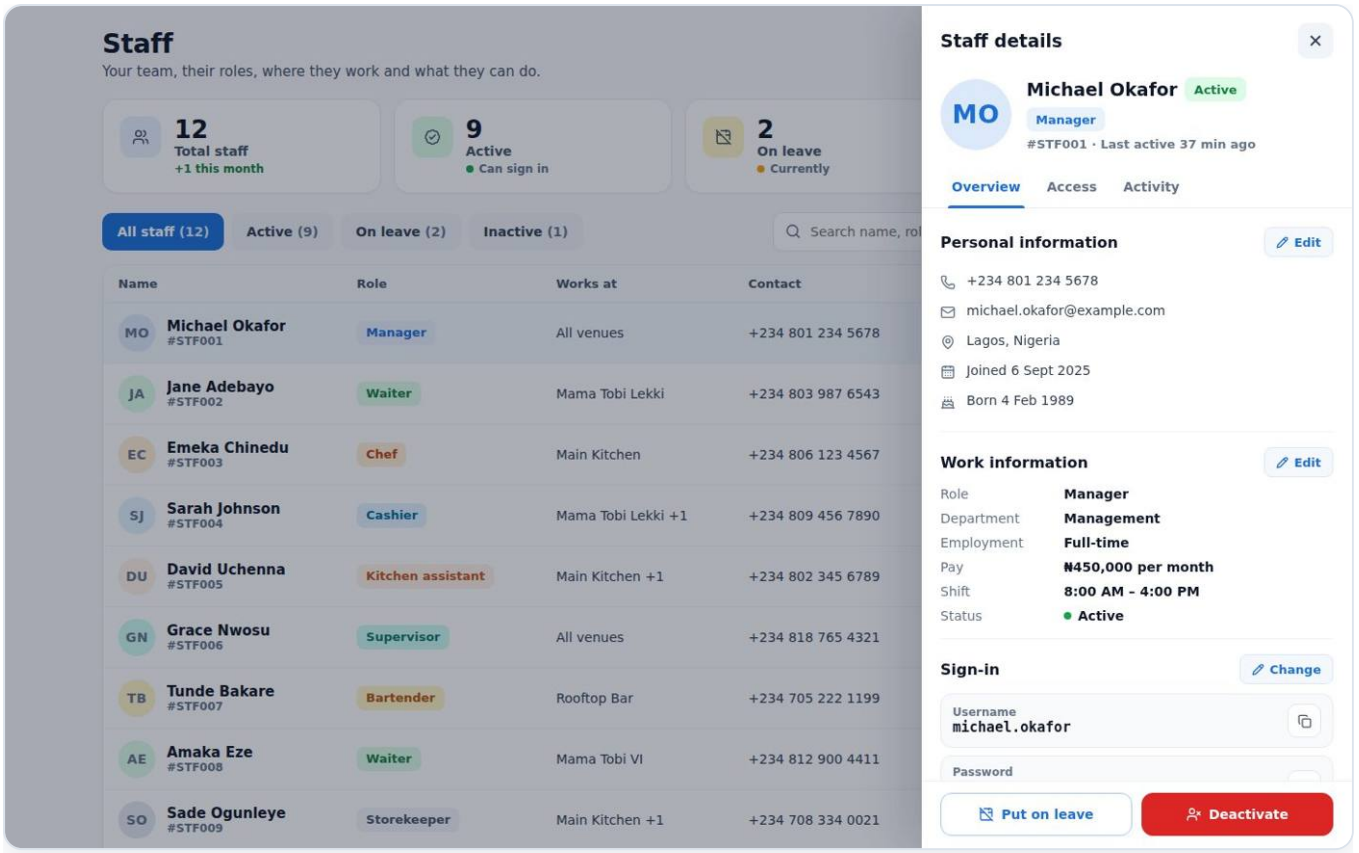

Figure 6.6 A staff member's details, with Put on leave and Deactivate at the bottom.

- **Change sign-in:** set a new username or password.
- **Put on leave:** mark them as away; they stay on your team.
- **Deactivate:** they can no longer sign in, and any device they're signed in on signs out on its next check.

How staff sign in

1. On the welcome screen or the sign-in page, tap **Staff sign-in**.
2. **Find your business:** enter the owner's (boss's) email address and tap **Continue**.
3. **Sign in to your shift:** enter the username and password the manager gave you, then tap **Start shift**.
4. Forgot your password? Ask your manager to reset it from the Staff page.

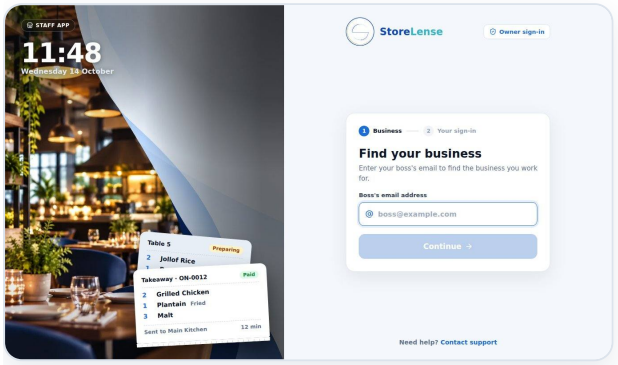

Figure 6.7 Step 1: find your business.

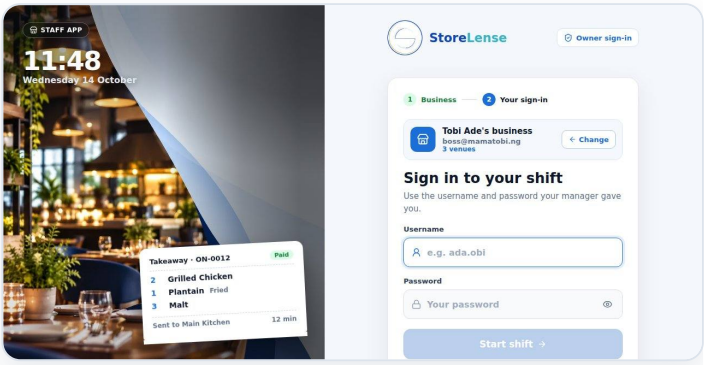

Figure 6.8 Step 2: sign in to your shift.

TIP When the owner changes a staff member's privileges or places, their screens update on the next page they open. No need to sign them out.

CHAPTER 07

Selling at the Sales Point

Takeaway and delivery sales at the counter. Dine-in orders are taken from Tables (chapter 8).

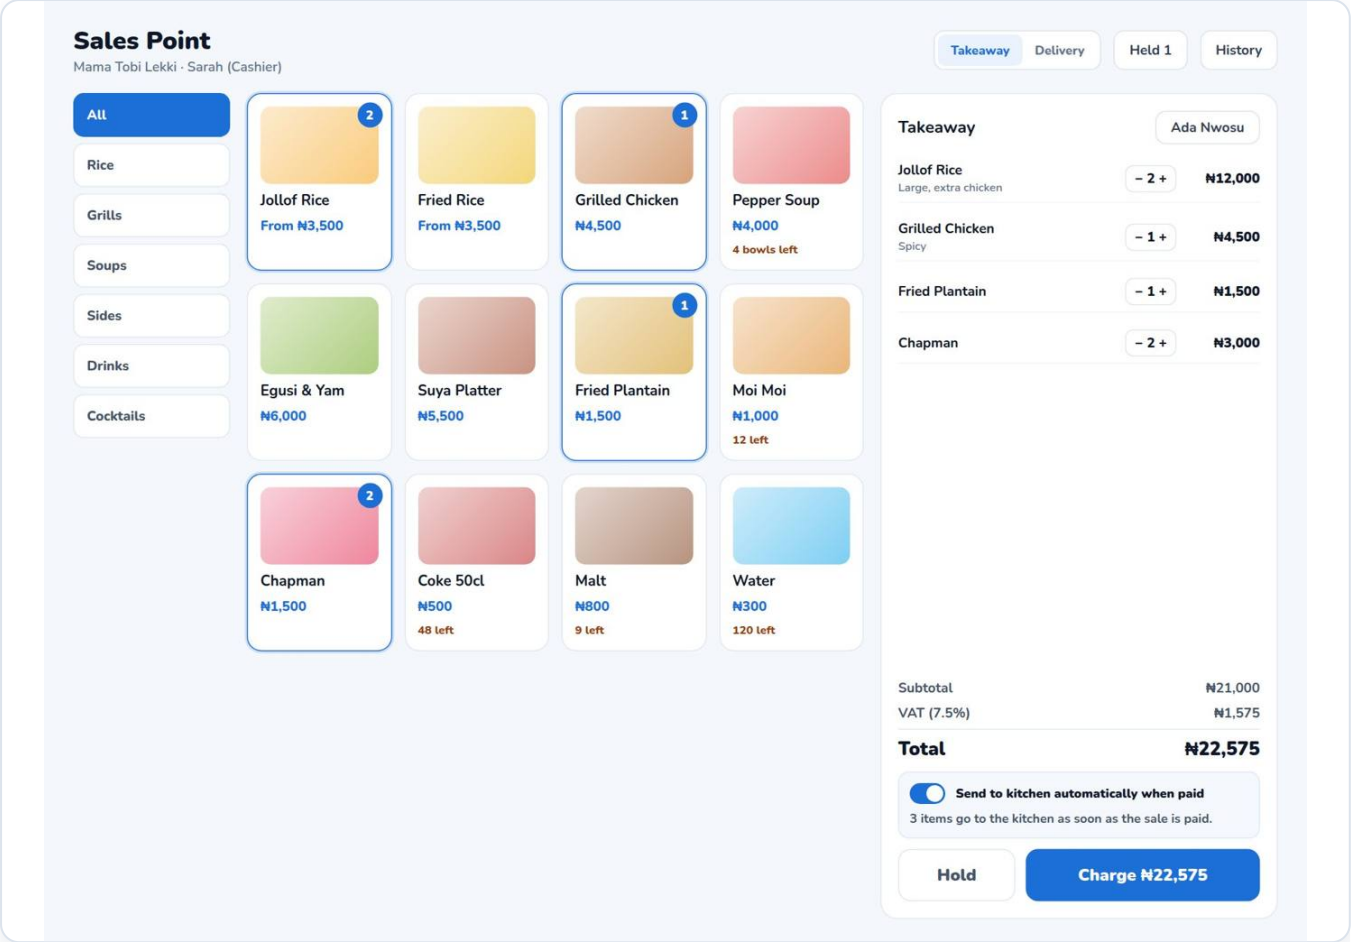

Figure 7.1 The Sales Point: categories on the left, the menu in the middle and the cart on the right.

Make a sale

1. Open your venue and go to the **Sales Point**.
2. Choose **Takeaway** or **Delivery** at the top. For delivery, enter the delivery fee.
3. Tap menu items to add them. Use the categories on the left or the search box to find items quickly.
4. If an item has sizes, extras or can be made at more than one station, a window opens: choose one size, any extras, where it's prepared and the quantity, then tap **Add**.
5. Use **–** and **+** on a cart line to change the quantity. At 1, the minus becomes a bin.
6. Tap the customer at the top of the cart to add a name and phone number, or leave it as **Walk-in customer**.

7 Tap **Charge** and take payment (below).

Batch and stocked items show how many are left, for example *12 plates left*. When they run out they show **Finished** or **Out of stock** and can't be added.

Discounts and coupons

Tap **Add discount or coupon** under the cart. Choose a percentage or a fixed amount, and/or enter a coupon code. Discounts come off before VAT. Only staff with the Discounts privilege can add them.

Hold a sale

Tap **Hold** to park the current sale and serve the next customer. A **held** chip appears at the top; tap it to resume or drop a held sale.

Take payment

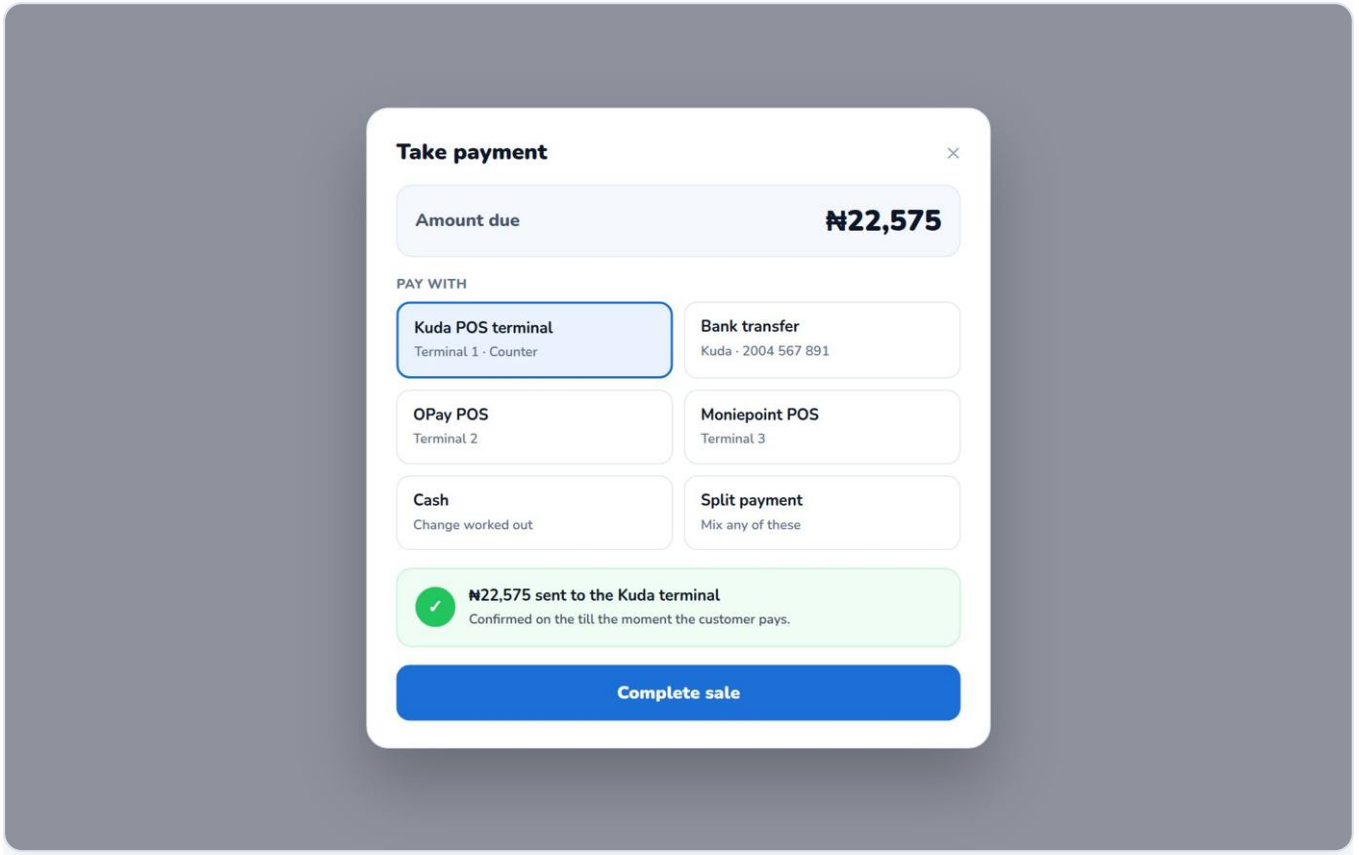

Figure 7.2 Choosing how the customer pays.

Method	How it works
Kuda POS terminal	The amount is sent straight to the terminal. The sale is confirmed automatically when the customer pays.
Bank transfer	Your receiving account is shown. Confirm once the transfer arrives.
OPay / Moniepoint POS	Use your existing terminal, then confirm on the till.

Method	How it works
Cash	Enter the amount given; the change is worked out for you.
Split payment	Part transfer, part card, part cash, in any mix.

When the sale is complete, the receipt appears. Tap **Print** for an 80mm receipt with your logo, or close it to start the next sale.

Figure 7.3 A printed payment receipt.

Sending food to the kitchen

Items that need preparing go to a kitchen, bar or café screen. Under the cart, the switch **Send to kitchen automatically when paid** decides when:

- **On** (the usual): as soon as the sale is paid, the items go to their stations by themselves.
- **Off**: after payment the cart locks and shows **Paid**. Tap **Send to kitchen**, check which items go where, and send. Each station gets its own ticket.

A kitchen copy can be printed for each ticket. It is marked PAID and "Not a payment receipt".

Selling offline

If the internet drops, keep selling. Sales are saved on the device and the sync chip shows how many are waiting. Kitchen orders are queued and sent as soon as the connection returns; you'll see a message when each one goes out.

> **CAREFUL** If a queued kitchen order fails, a message tells you which station it was for. Tell the kitchen directly so the customer isn't kept waiting.

Sales history

Tap **History** at the top of the Sales Point to see today's or yesterday's sales, or pick a custom range. Tap a sale for its details. Refunds are covered in chapter 15.

CHAPTER 08

Tables and dine-in

See which tables are free, seated or waiting for the bill. Take orders at the table and charge at the end.

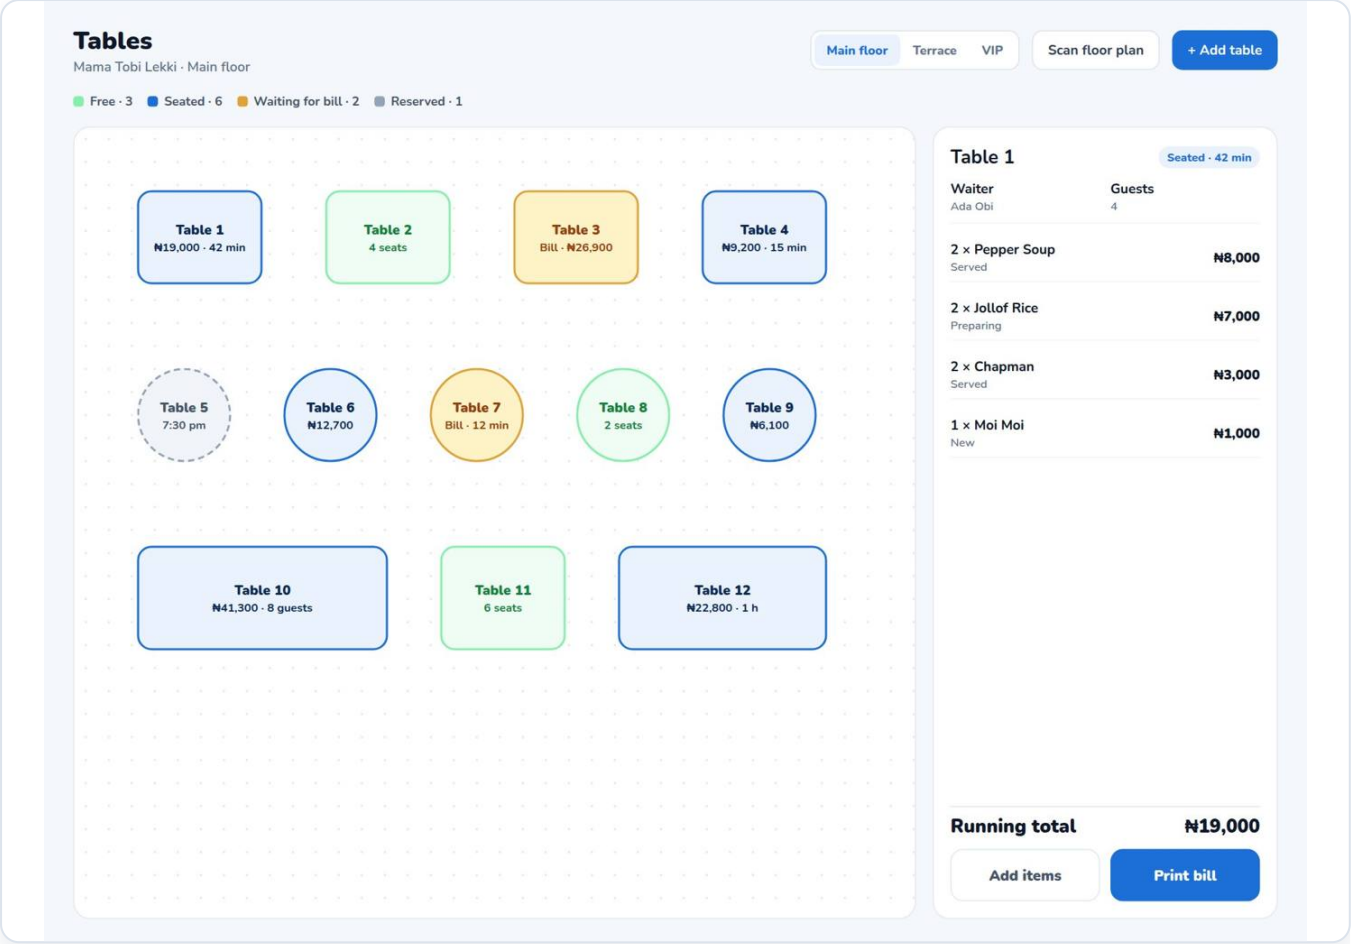

Figure 8.1 The floor plan, with each table's status, and the open table's order on the right.

Set up your floor plan

This needs the Manage tables privilege.

1. Open your venue and go to **Tables**.
2. Tap **Add table** to add tables one by one, or **Scan a Photo** of your room to create them from the picture.
3. Tap **Arrange**, drag the tables to match your room, then tap **Done** to save. On a keyboard, arrow keys nudge a selected table.
4. Use floors (such as Main floor, Terrace, VIP) to split a big space.

Switch between **Floor Plan** and **List View** at any time. Table colours show the status: free, seated, waiting for the bill or reserved.

Take a table order

1. Tap a free table and open it. Assign the waiter serving it and the number of guests.
2. Add items as at the Sales Point. They're added to the order but not sent yet.
3. Tap to confirm the order. The items go to their kitchens, bars and cafés. An order needs a waiter before it can be confirmed.
4. Add more rounds the same way at any time. The running bill updates as you go.

> **TIP** Waiters can only assign tables to themselves. Managers can assign any waiter.

Move, merge and reserve

- **Move** an open order to another table when guests change seats.
- **Merge** two tables that both have open orders into one bill.
- **Reserve** a table for a customer, with a time and number of guests. Cancel the booking if they don't come.

Bill and close the table

1. Tap **Print bill** to give the guests their bill.
2. Take payment the same way as at the Sales Point (cash, transfer, POS or split).
3. Close the table. It goes to **cleaning**; when it's ready, mark it clean so it shows as free again.

The Orders page

The Orders page lists every order in the venue with its items, station and how long it has been waiting. Items marked ready by the kitchen are highlighted so waiters can serve them. Tap an order for its timeline, and use **Mark as rush** to move it to the top of the kitchen's queue.

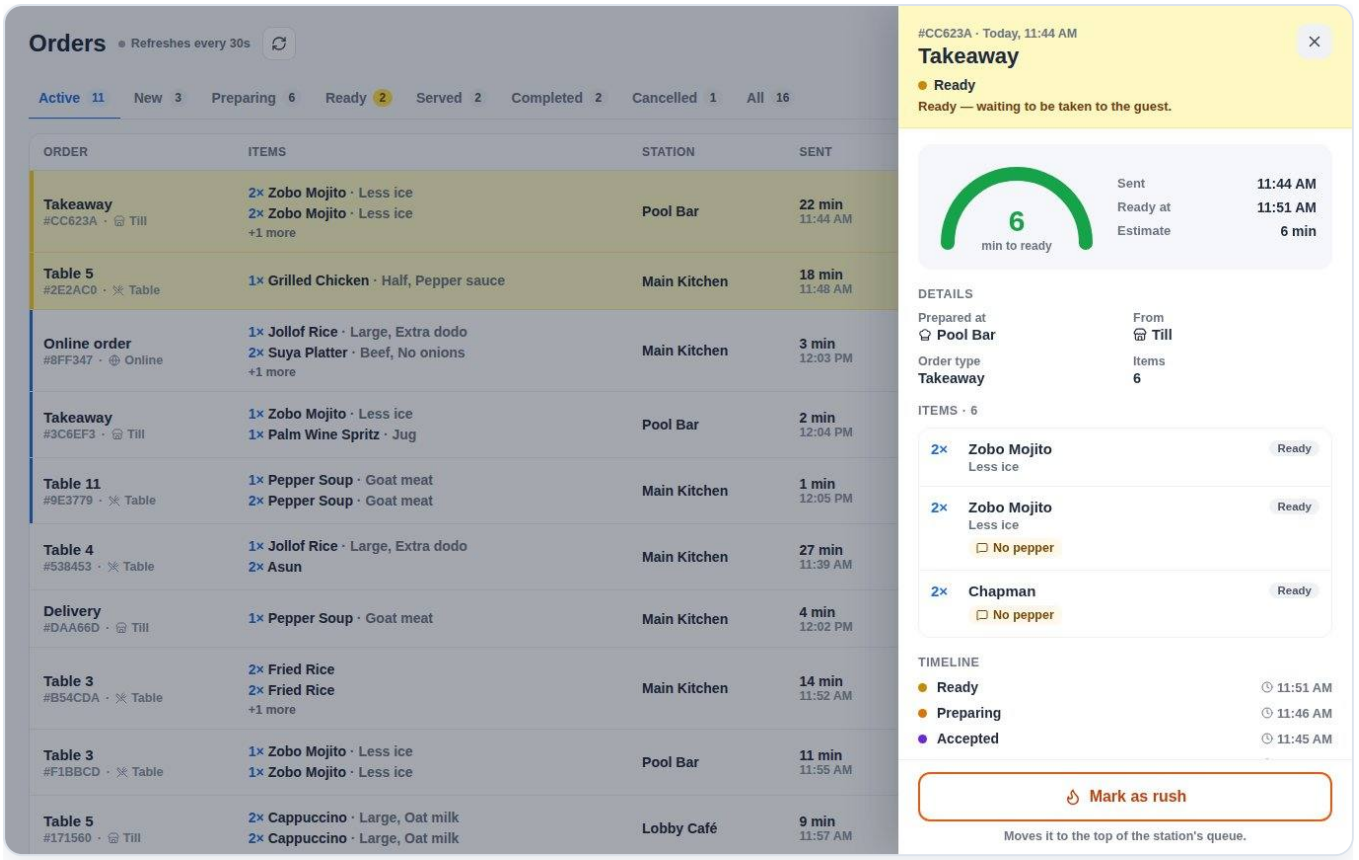

Figure 8.2 The Orders page, with an order's details open on the right.

CHAPTER 09

The kitchen display

Tickets appear on the kitchen, bar or café screen the moment they are ordered, with a chime.

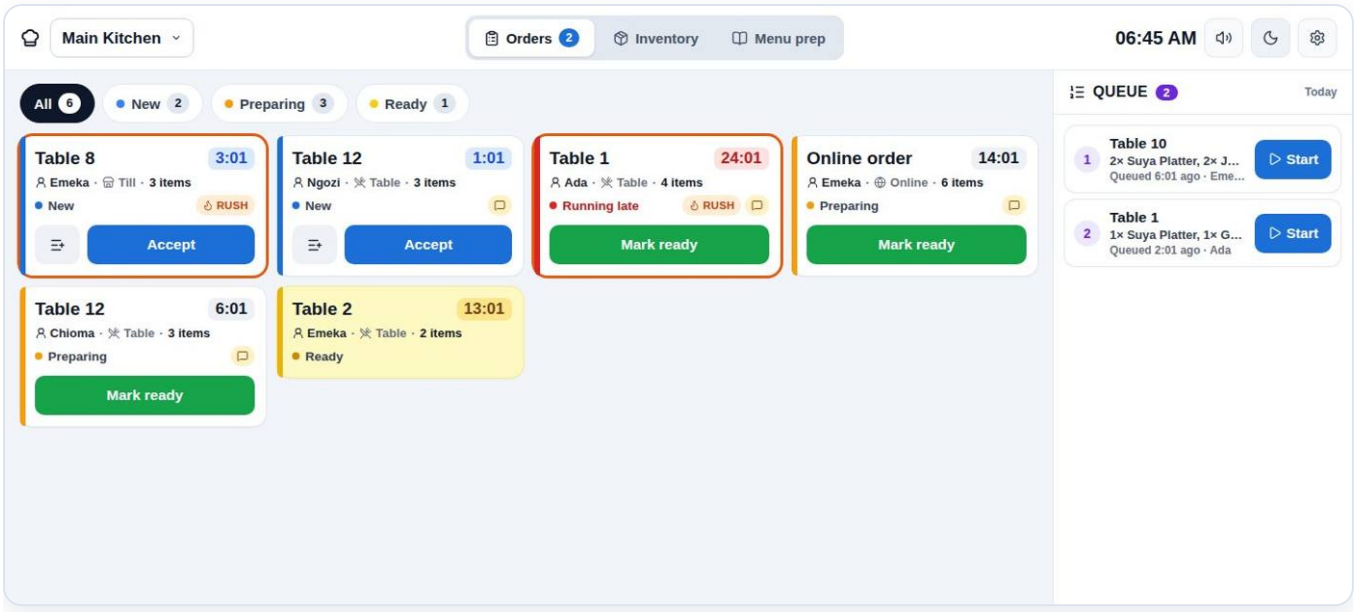

Figure 9.1 The kitchen screen's Orders page: tickets on the left, the queue on the right.

Open the kitchen screen

1. Open the kitchen from **Stores** on the device that stays in the kitchen (a tablet or laptop works well).
2. The screen shows three pages at the top: **Orders**, **Inventory** and **Menu prep**.
3. Tap anywhere once to turn on sounds. Browsers only allow sound after a tap, so a blue bar asks for one until then.

> **NOTE** Staff see only the kitchens they're assigned to. A kitchen link they aren't assigned to shows "You're not assigned to this kitchen".

When a new order arrives

A chime plays, an alert opens with the order and its items, and the ticket pops in on the board. On the alert:

- **Accept**: start on it now.
- **Queue**: park it in the queue to start later.
- **Later**: close the alert; the ticket stays on the board as New.

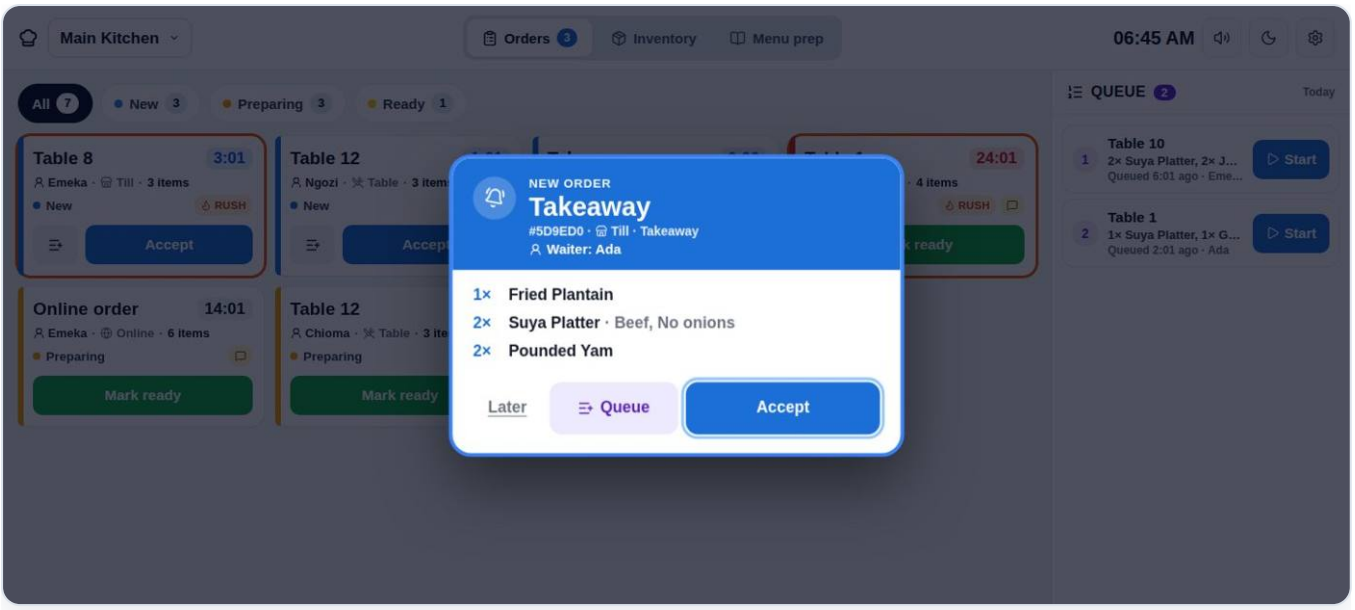

Figure 9.2 A new order alert.

Cook it

1. Tap **Accept** (or **Start** on a queued ticket).
2. **Load ingredients:** check the quantities each dish takes from stock and adjust them if you used more or less, then tap **Start preparing**. Use **Start without ingredients** to skip this step.
3. The ticket moves to **Preparing** and its timer keeps running.
4. When it's done, tap **Mark ready**. The waiter sees it ready on the Orders page and serves it.

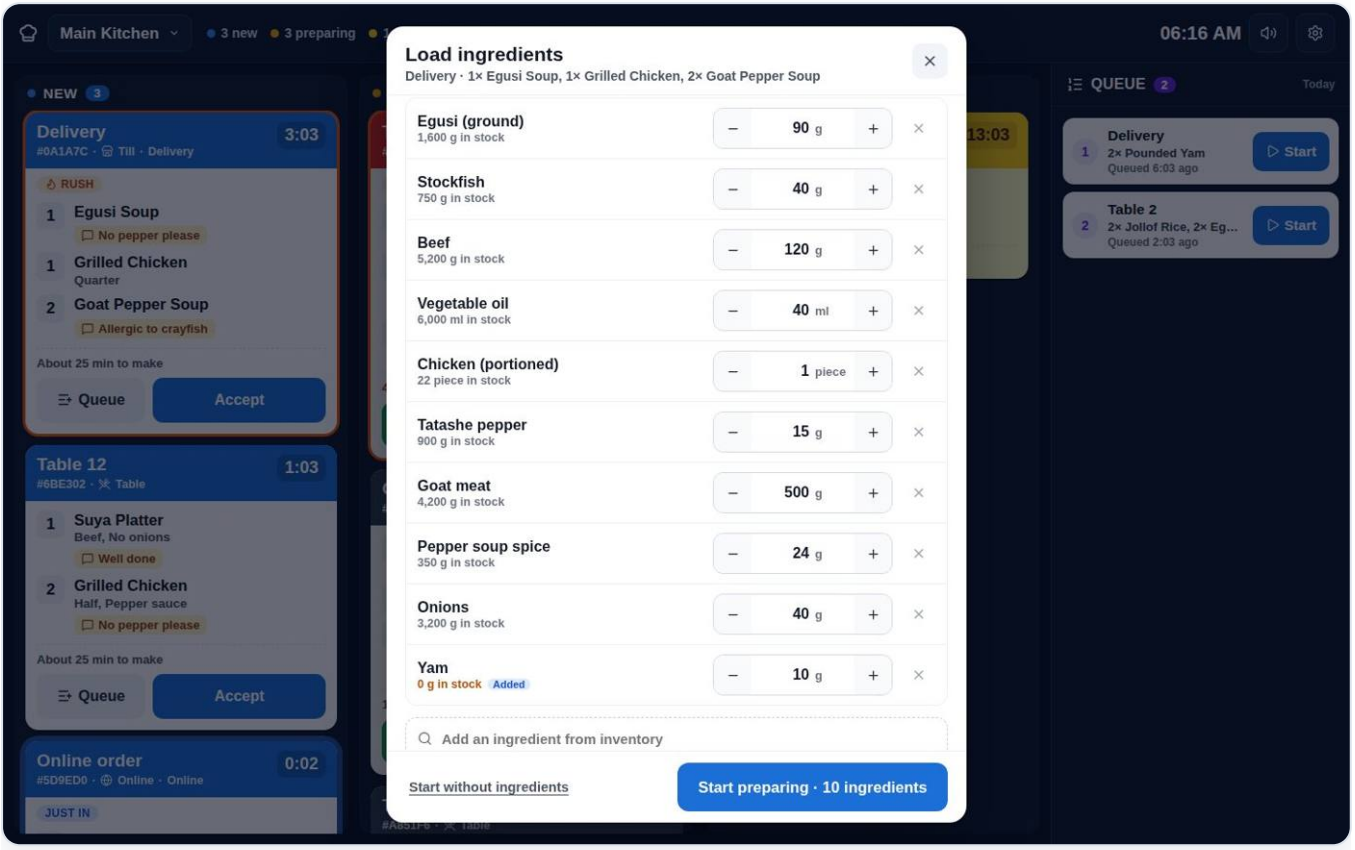

Figure 9.3 Loading ingredients before cooking. Quantities come from each dish's recipe.

TIP Tap a ticket to see all its details, including notes and extras. Rush orders and late tickets are highlighted so they're never missed.

Filters and the queue

Filter the board by **All**, **New**, **Preparing** or **Ready**. The queue sits on the right on wide screens; on smaller screens tap **Queue** to open it. New orders show first, then Preparing, then Ready, with rush orders on top.

Screen settings

Tap the gear icon for this screen's settings:

- **Theme**: Dark suits most kitchens; Light is better in bright rooms. The sun and moon icon in the header switches too.
- **Load ingredients when starting an order**: turn off to skip the ingredients step.
- **Sound for new orders** and **Volume**, with a Test button.

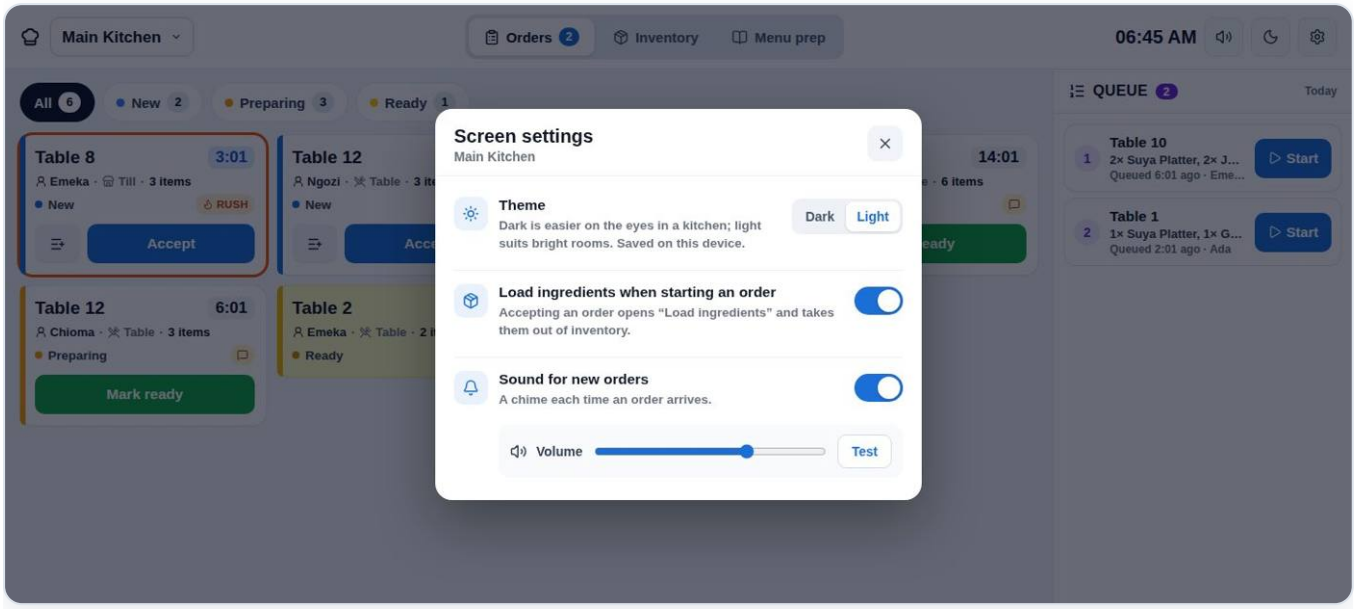

Figure 9.4 Screen settings for this kitchen.

CAREFUL No sound on new orders? Check the device isn't muted, the browser tab isn't muted, and the sound icon in the header isn't crossed out. Then tap the screen once.

CHAPTER 10

Kitchen inventory

Track every ingredient in the kitchen: how much is in stock, what it cost, and when it expires.

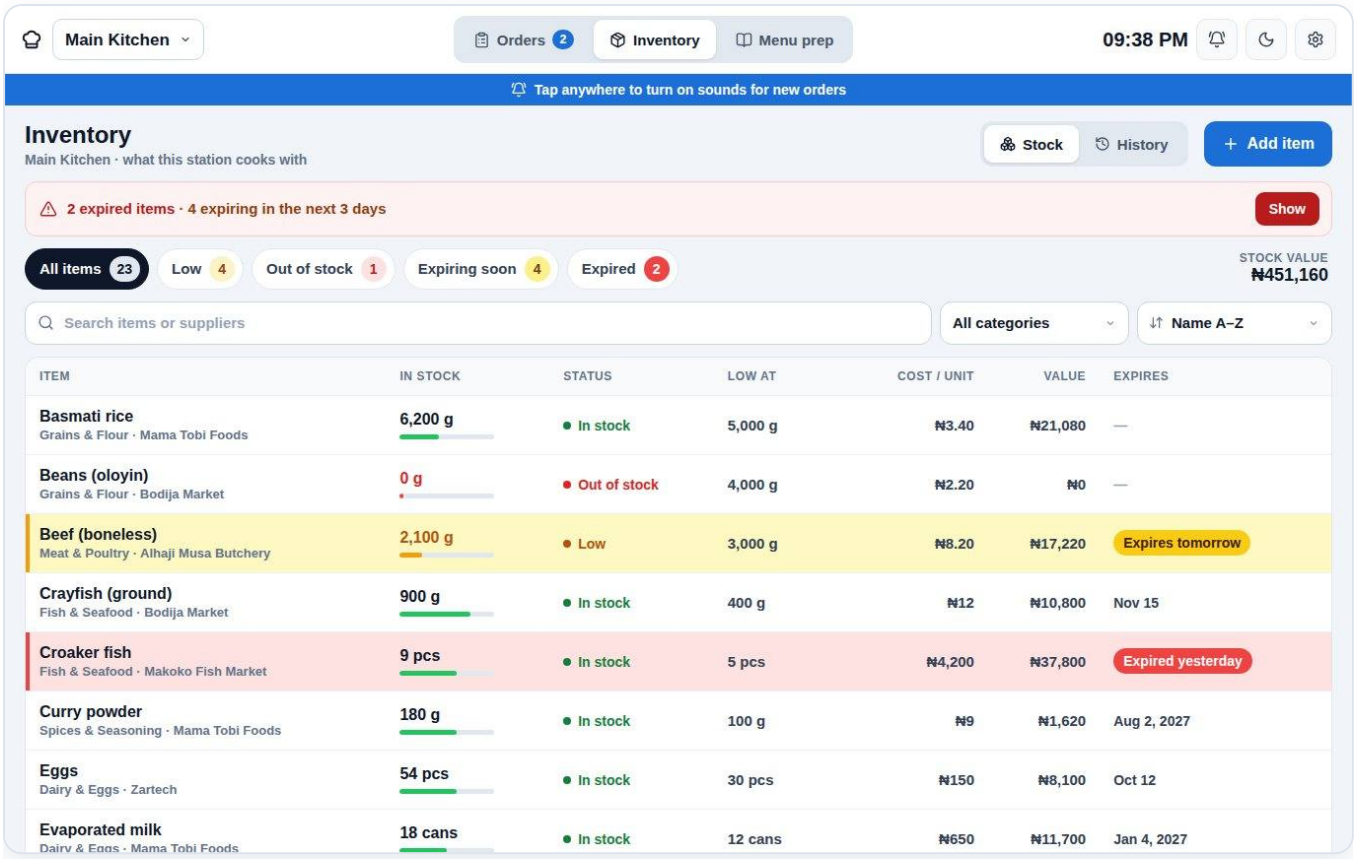

Figure 10.1 The kitchen's inventory: stock value at the top, expiry warnings, and every item with its status.

Read the stock list

- **Status**: In stock, Low (at or under its low-stock alert), or Out of stock.
- **Expires**: items expiring soon are amber; expired items are red. The banner at the top counts both; tap **Show** to filter.
- **Stock value**: what your kitchen stock is worth in naira, always up to date.
- Filter by All items, Low, Out of stock, Expiring soon or Expired, by category, or search by name or supplier.

Add an item

1. Tap **Add item**, then **Fill in one item**.
2. Enter the name, category and the unit you measure it in (for example g, kg, ml, l or pieces).

3. Enter the opening stock and the low-stock alert level.
4. Optionally, fill in **How it's bought**: for example a bag of 10,000 g for ₦14,500. The cost per gram is worked out for recipes.
5. Add the expiry date and supplier if you know them, then tap **Add item**.

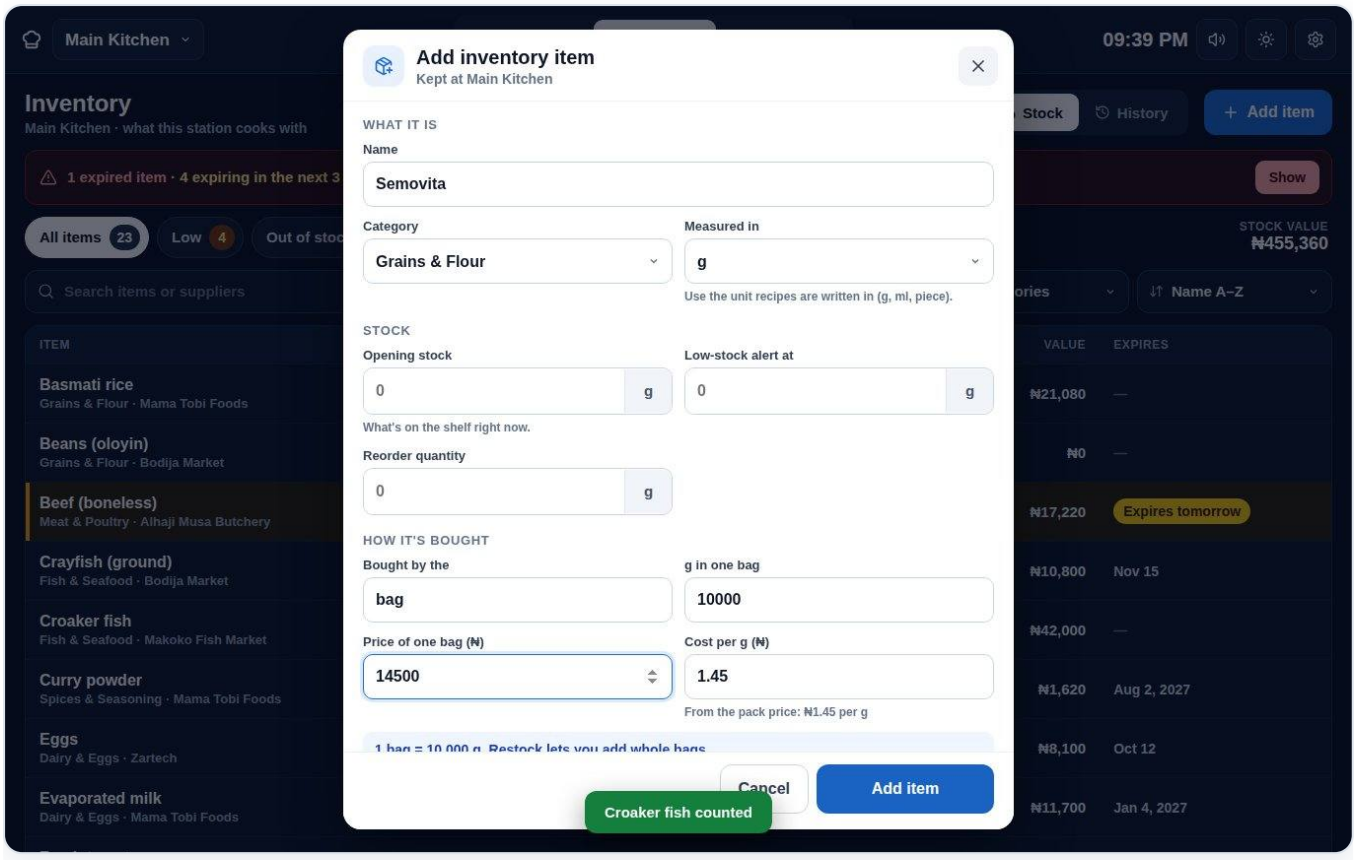

Figure 10.2 Adding an ingredient. How it's bought is optional.

Import many items from Excel

1. Tap **Add item**, then **Import from Excel**.
2. Download the template. It has drop-down lists for categories and units.
3. Fill in your items and upload the file.
4. Check the review: rows with problems are marked with what to fix. Tick **Problems only** to see just those.
5. Tap **Import**. Items are added in batches, and you can fix the rest and upload again.

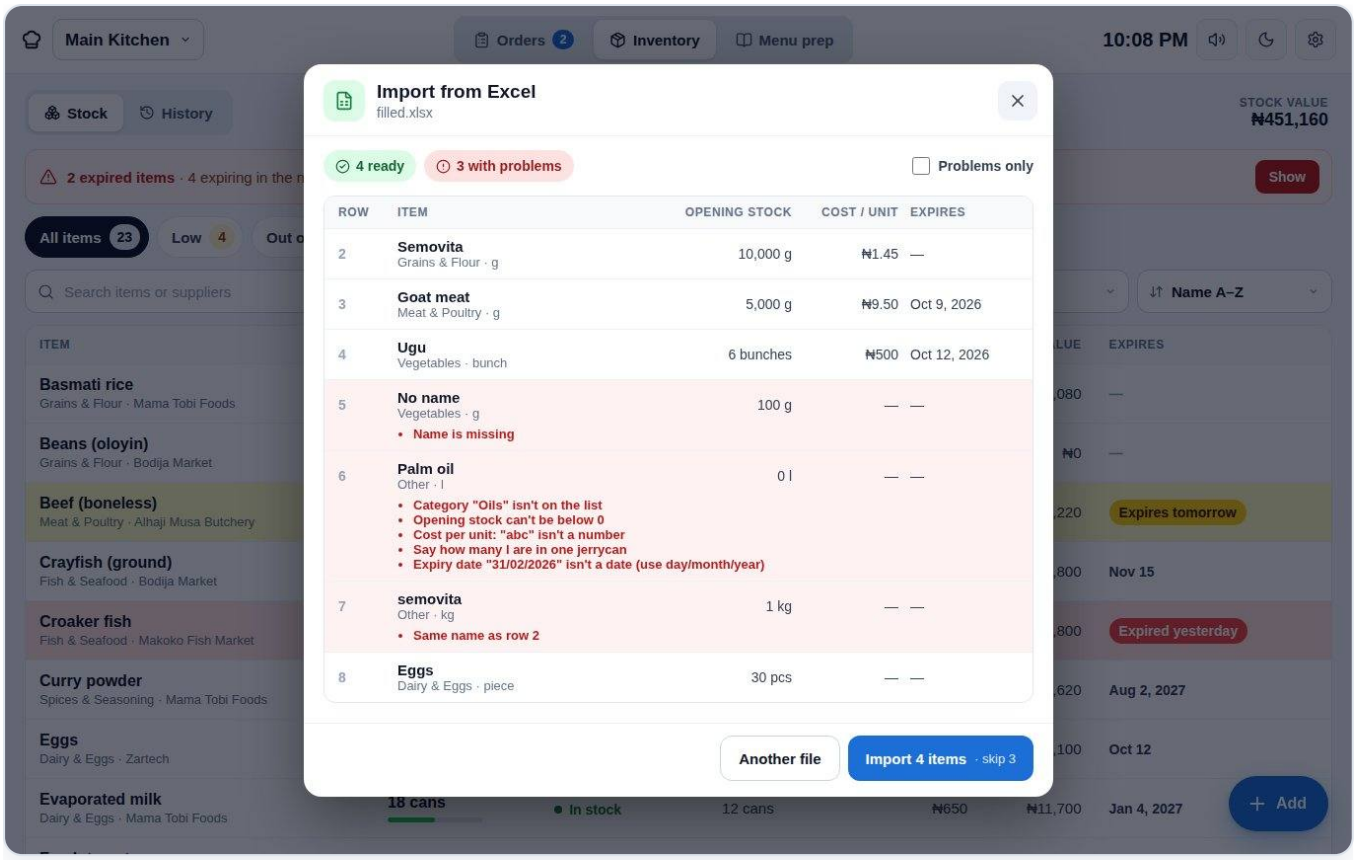

Figure 10.3 Reviewing an Excel import before adding the items.

Restock, waste and counts

Tap an item to open it. From there:

- **Restock**: enter the quantity received, the cost and a note (such as an invoice number). The item's cost becomes the average of the old and new stock.
- **Record waste**: enter the quantity wasted and what happened (for example, the fridge was off overnight).
- **Count stock**: enter what you actually counted. The difference is recorded.
- **Edit details** or **Archive this item** when you no longer use it.

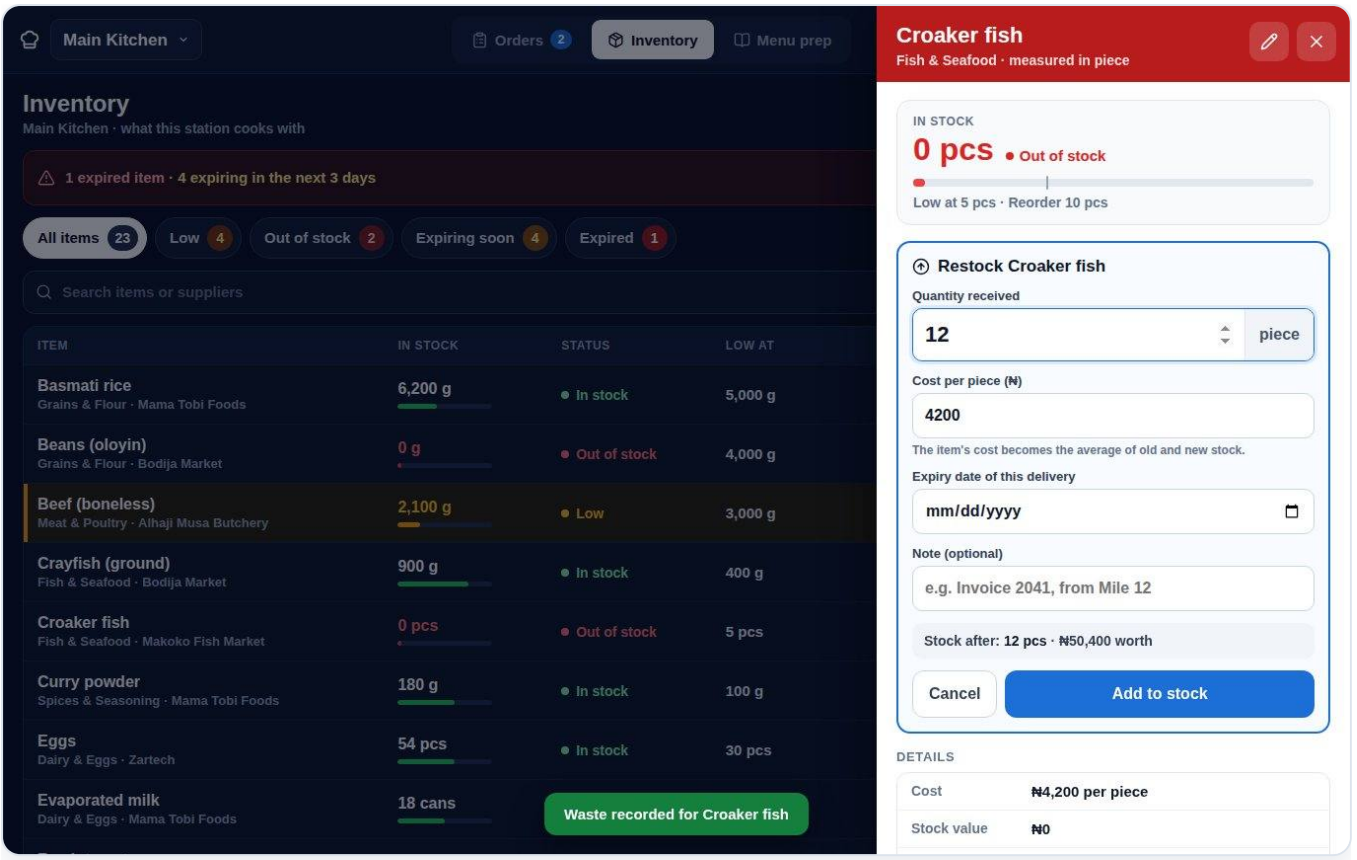

Figure 10.4 Restocking an item that ran out.

History

The **History** tab lists every movement: opening stock, restocks, ingredients used for orders, batches, waste and counts. Nothing is ever deleted from it. Filter by type and period to find what you need.

CHAPTER 11

Menu prep, recipes and batches

Link each dish to its ingredients so you know what every plate costs, what you can still make, and what to cook in batches.

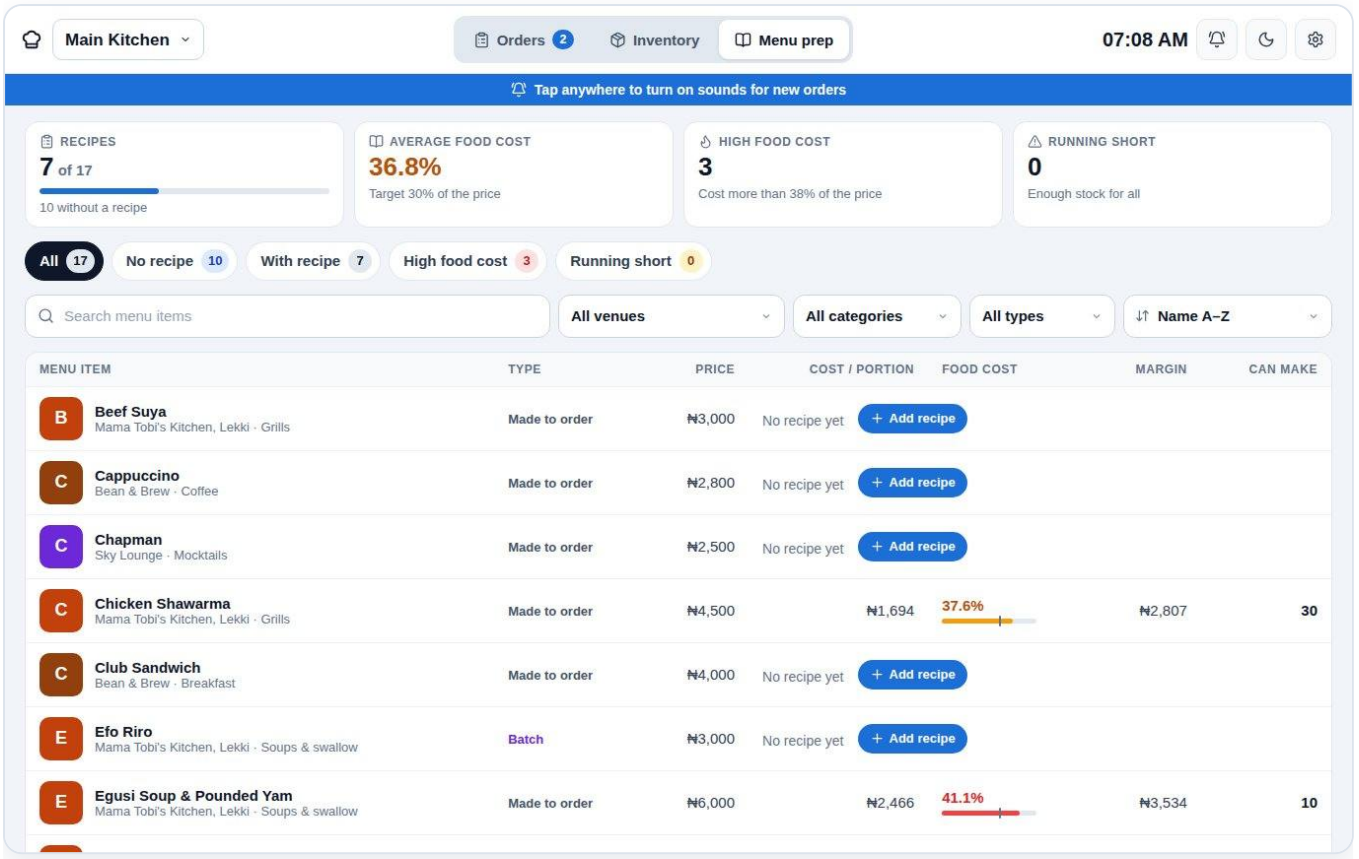

Figure 11.1 Menu prep: every made-to-order and batch item, with its recipe cost and food cost percentage.

The menu prep list

Menu prep lists your made-to-order and batch items across all venues, with their price, cost per portion, food cost, margin and how many portions you can make with the stock you have. The cards at the top show recipes done, average food cost, high food cost items and anything running short. On smaller screens these are under the **Insights** button.

Add or edit a recipe

1. Tap **Add recipe** next to an item (or open the item and tap **Edit recipe**).
2. Add each ingredient with the amount for one portion. Suggestions come from your similar recipes and common Nigerian dishes.
3. Set **Waste %** for ingredients that lose weight in preparation, such as peeling or trimming. Tick **Optional** for ingredients that aren't always used.

4. Add the method steps if you like.
5. Check the analysis on the right: cost per plate, food cost % (aim for about 30%), margin and a suggested price.
6. Tap **Save recipe**. Ingredients that aren't in the inventory yet are created for you.

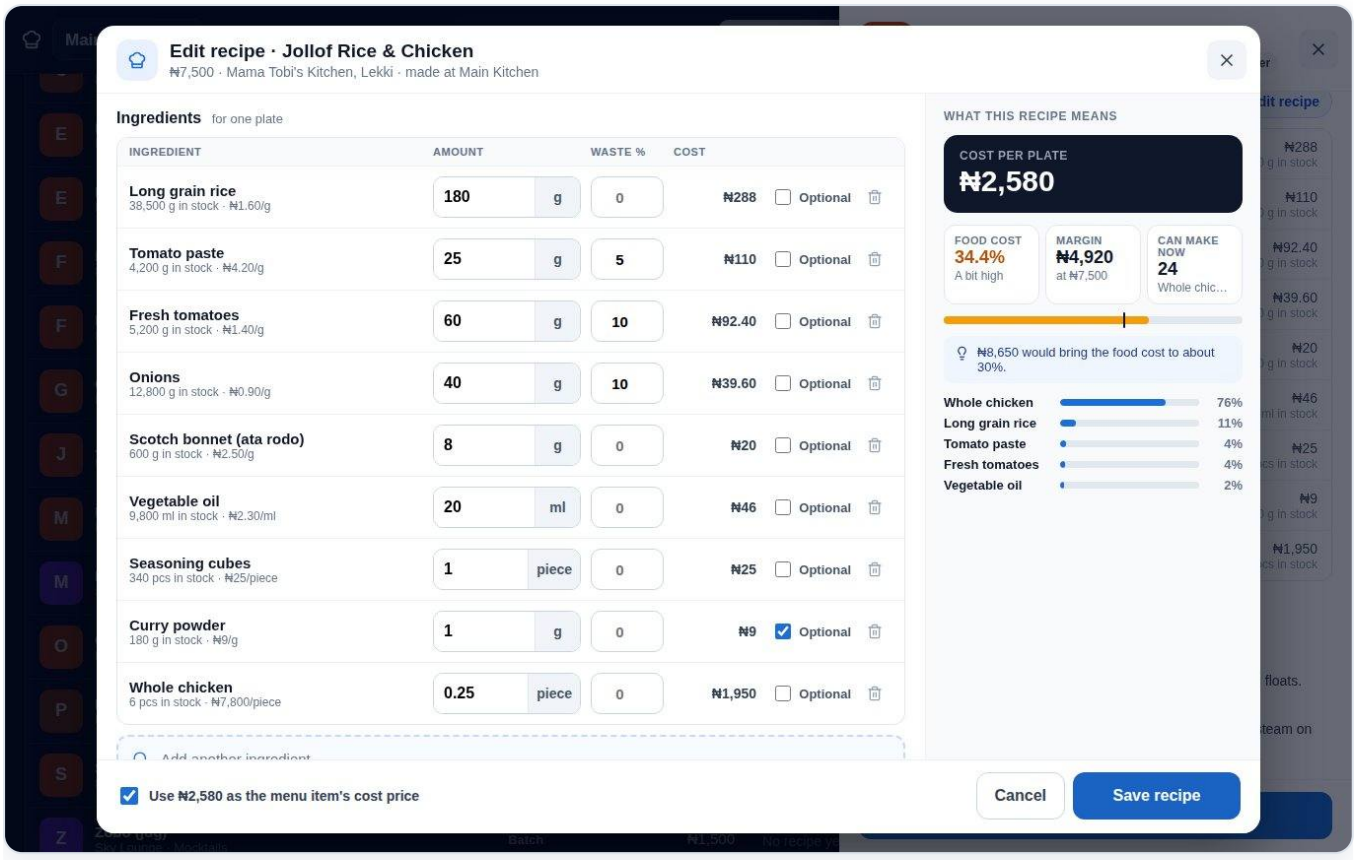

Figure 11.2 Editing a recipe, with the cost per plate and food cost worked out as you type.

Make a batch

For batch items, the kitchen prepares portions in advance and the venue sells them down.

1. Open the batch item and tap **Make a batch**.
2. Set how many portions were made. Use the quick buttons for one or more batches of the recipe.
3. Check **Ingredients used** and change any amount to what was really used.
4. Add a note if you like (for example, Lunch batch), then tap **Make** and send.

The portions are added to the item's count at the venue straight away, the ingredients come out of stock, and the item's history records the batch. A batch can be made without a recipe: then no ingredients are taken.

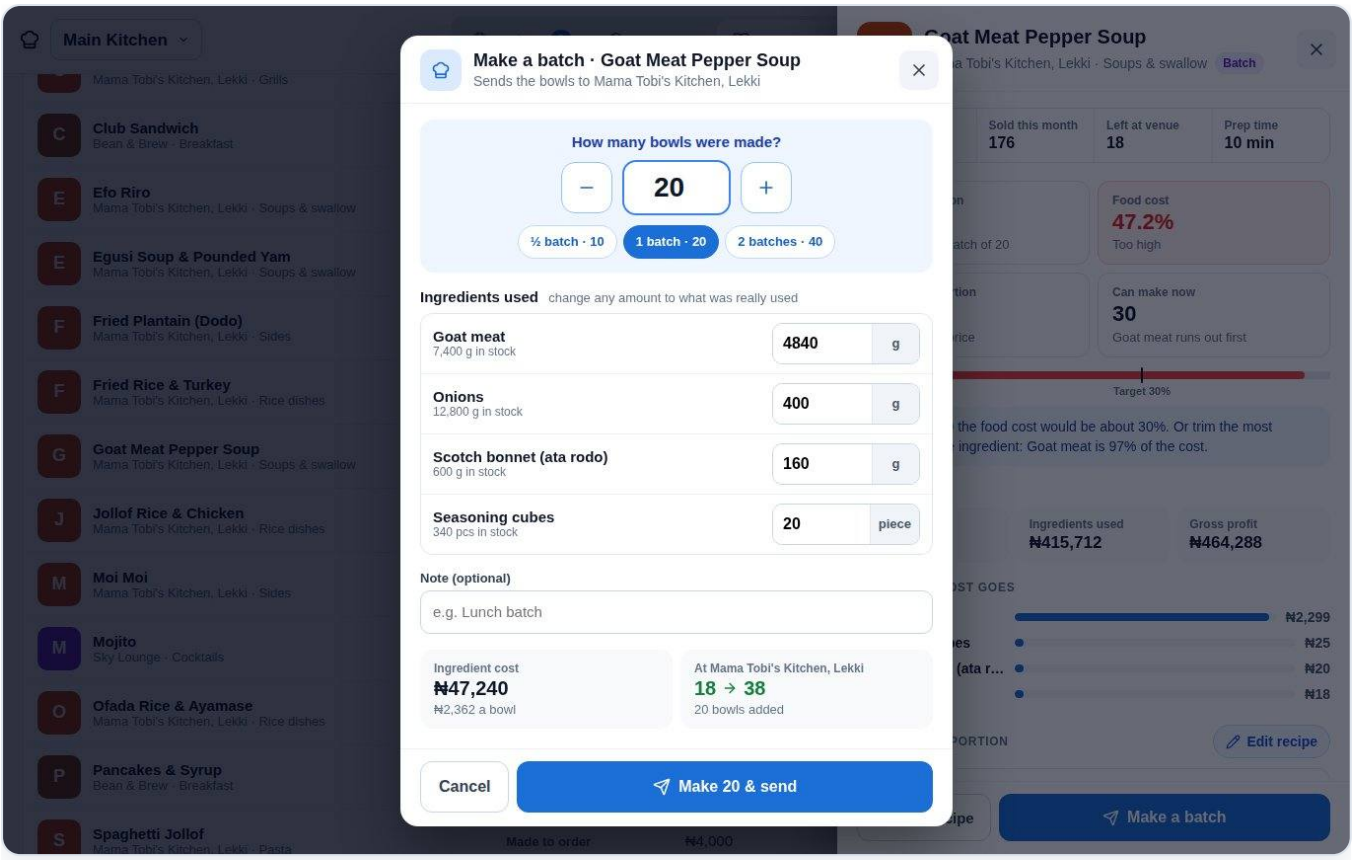

Figure 11.3 Making a batch of 20 portions.

Batch requests from venues

When a venue runs low on a batch item, staff there can tap **Request new batch**. They choose how many portions, when they're needed and which kitchen makes them.

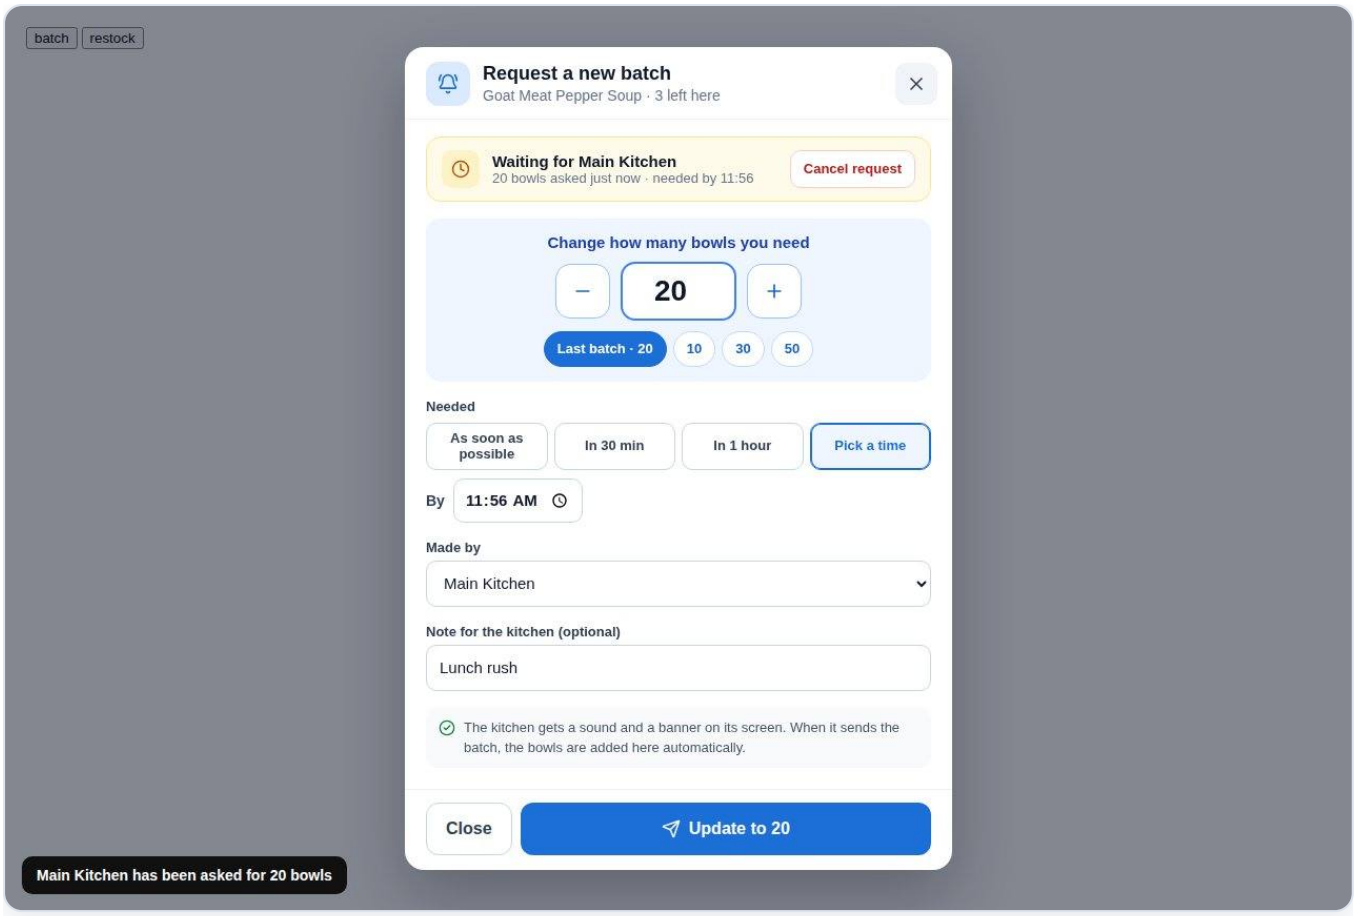

Figure 11.4 A venue asking the kitchen for a new batch.

On the kitchen screen, a chime plays and a banner appears on every page, with an amber count on Menu prep. Tap **See request**, then make the batch (which completes the request) or decline it with a reason. The venue is told either way.

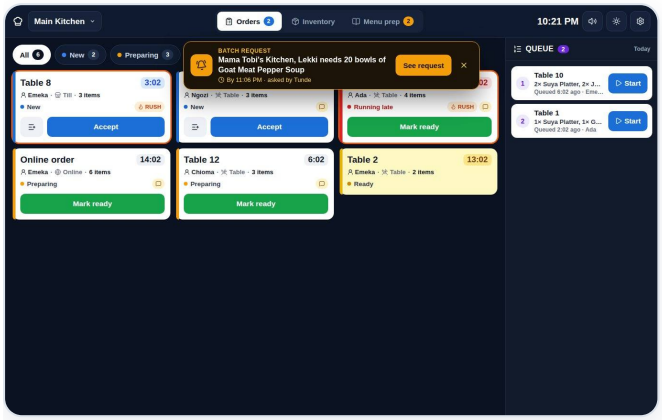

Figure 11.5 The batch request banner on the kitchen screen.

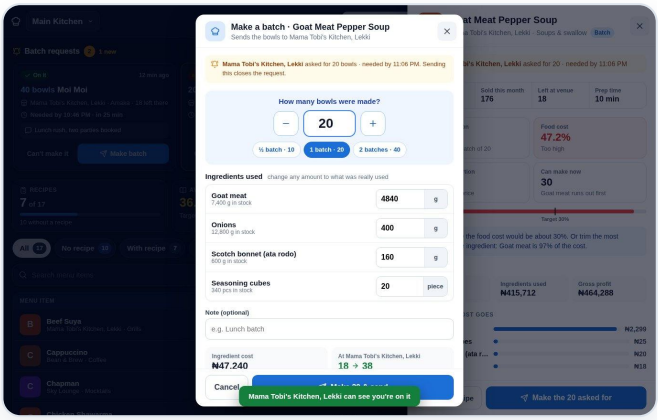

Figure 11.6 Making the requested batch.

CHAPTER 12

Storage (warehouse)

Your store room. Stock here isn't sold or cooked directly: move menu items to a venue to sell them, and ingredients to a kitchen for recipes.

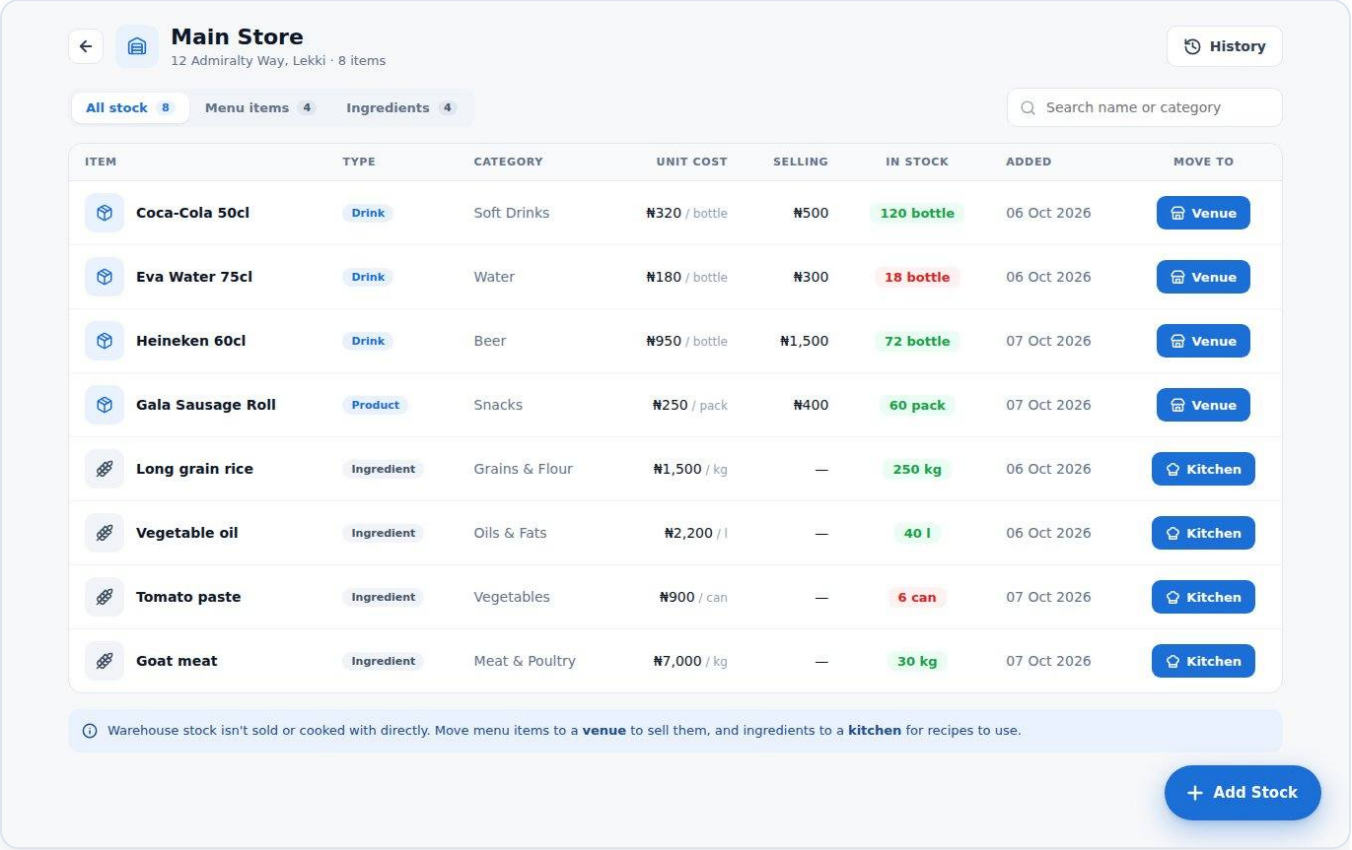

Figure 12.1 A warehouse: stocked menu items and kitchen ingredients, with Move to buttons.

Two kinds of stock

Kind	Examples	Moves to
Stocked menu item	Drinks, packaged snacks, takeaway packs.	Venues, where they are sold.
Kitchen ingredient	Rice, oil, tomatoes, meat.	Kitchens, where recipes use them.

Add stock

1. Tap **Add Stock**.
2. Choose what you're adding: a stocked menu item or a kitchen ingredient.

3. Choose how: **Create manually** (one at a time), **Upload from file** (a list from Excel or CSV), or **Scan with AI** (take a photo of a list or invoice).
4. Review everything before it's added.

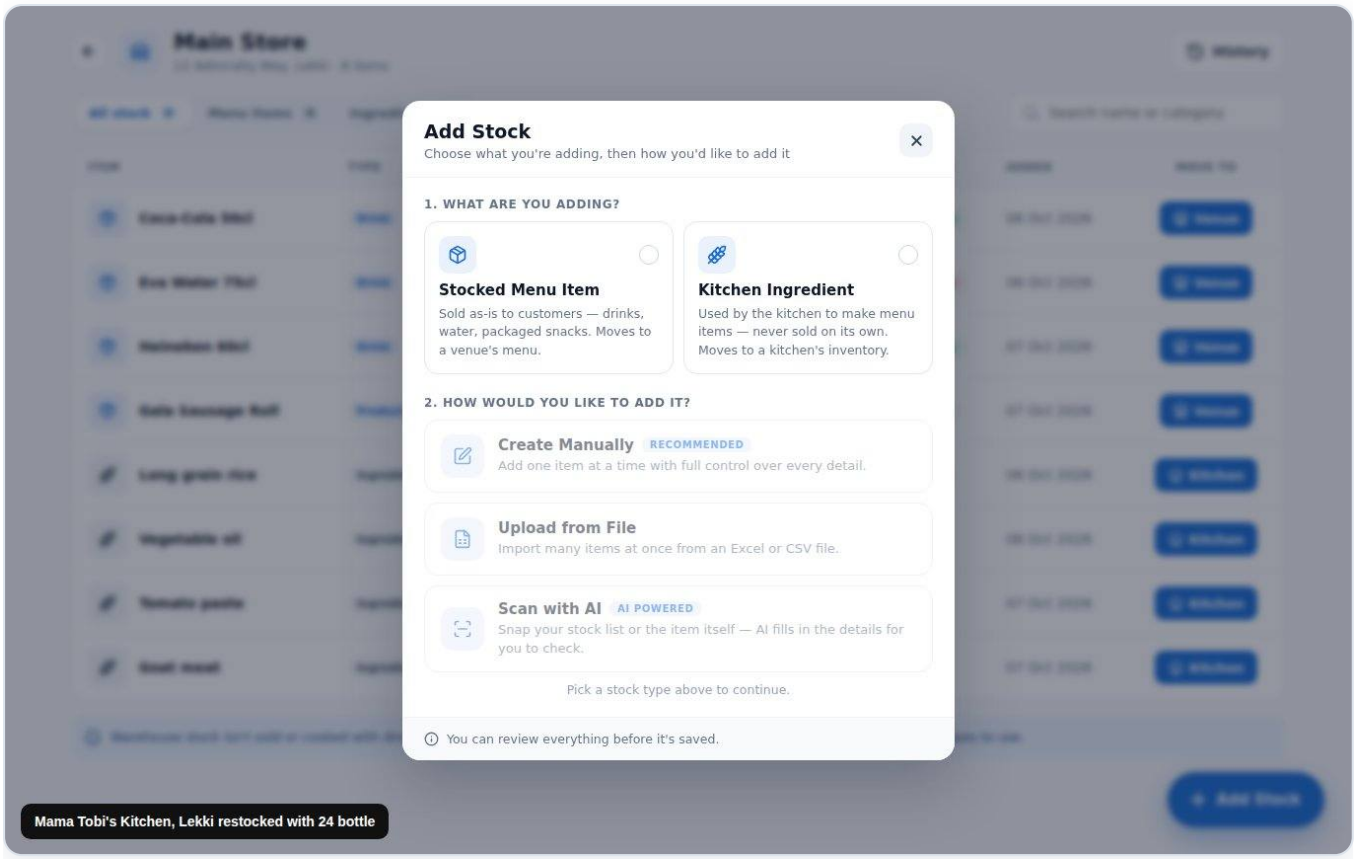

Figure 12.2 Adding stock: what you're adding, and how.

Move stock

1. Tap **Venue** or **Kitchen** in the Move to column.
2. Choose where it goes and the quantity (or **All**), then tap **Move stock**.
3. If the item already exists there, choose **Restock existing item** to add to it, or **Create as a new item** to keep it separate (for example a different size).

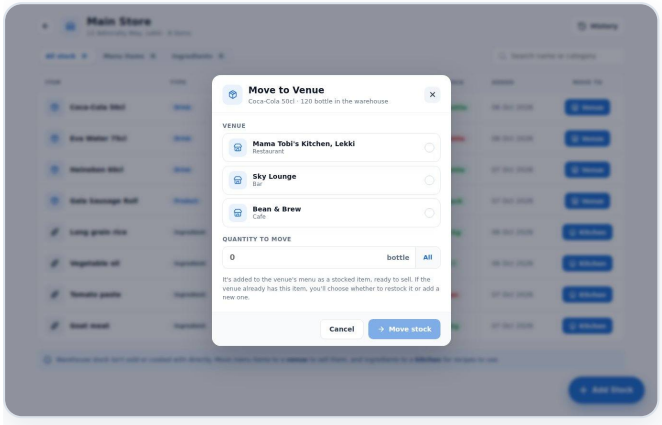

Figure 12.3 Moving bottles to a venue.

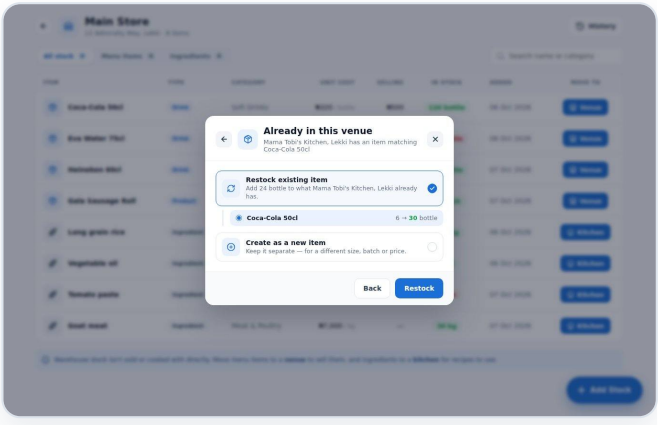

Figure 12.4 The item already exists at that venue.

Every addition, edit, move and deletion is recorded. Tap **History** at the top to see who did what, and when.

CHAPTER 13

Online orders

Orders from your website arrive with a sound, go to the kitchen in one tap and are tracked until delivered.

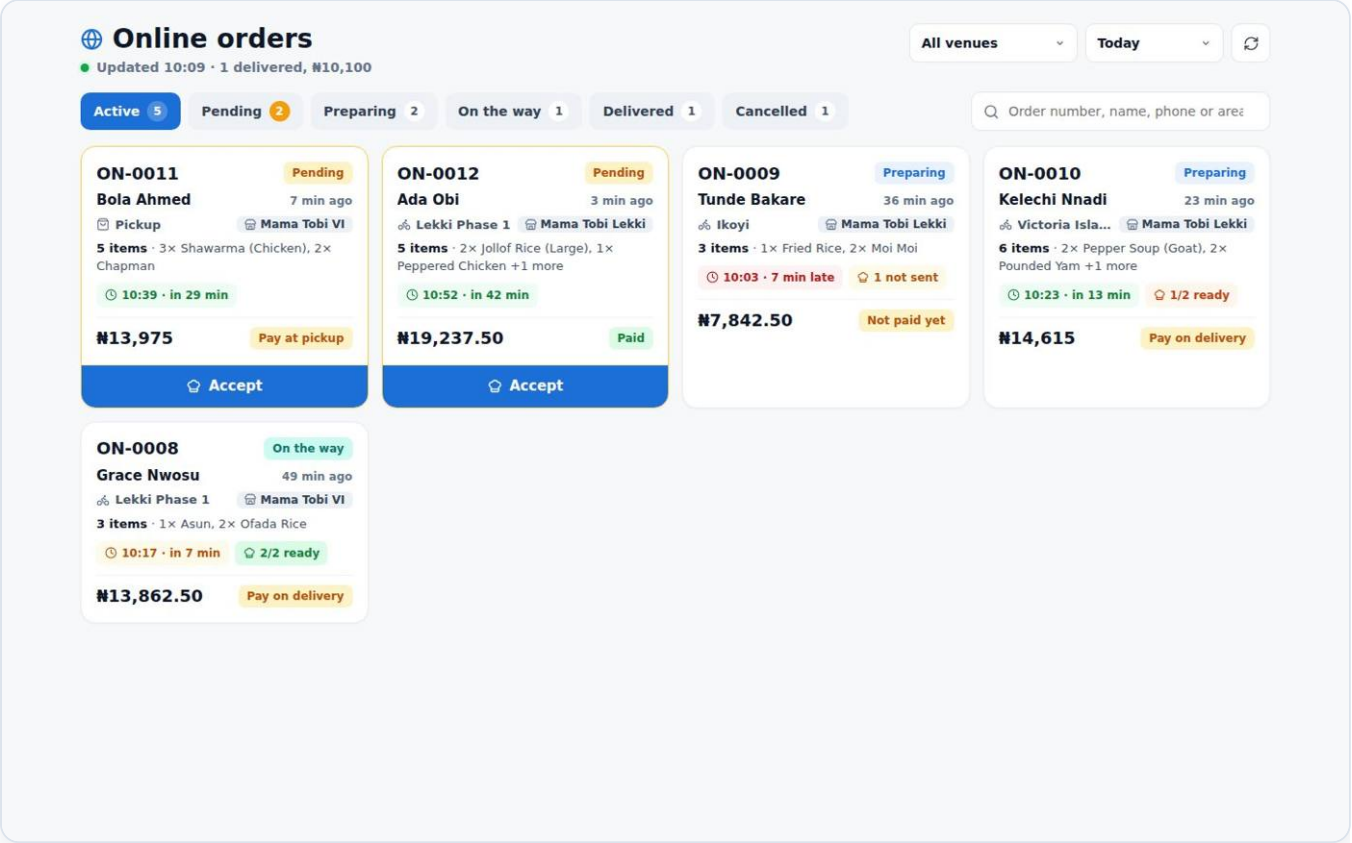

Figure 13.1 Online orders: each card shows the customer, items, delivery time and payment.

Handle an online order

1. A new order arrives with a sound and a banner. Tap **View**, or tap the order card.
2. Check the items, the delivery address and whether it's paid or to be paid on delivery or pickup.
3. Tap **Accept & send to kitchen**. The items go to their stations like any other order. Tap **Reject** if you can't fulfil it.
4. If it's running late, tap **Adjust time**. The customer sees the new time on their tracking page.
5. When it leaves, tap **Mark on the way** and add the rider's name and phone (optional).
6. When the customer has it, mark it delivered (or picked up).

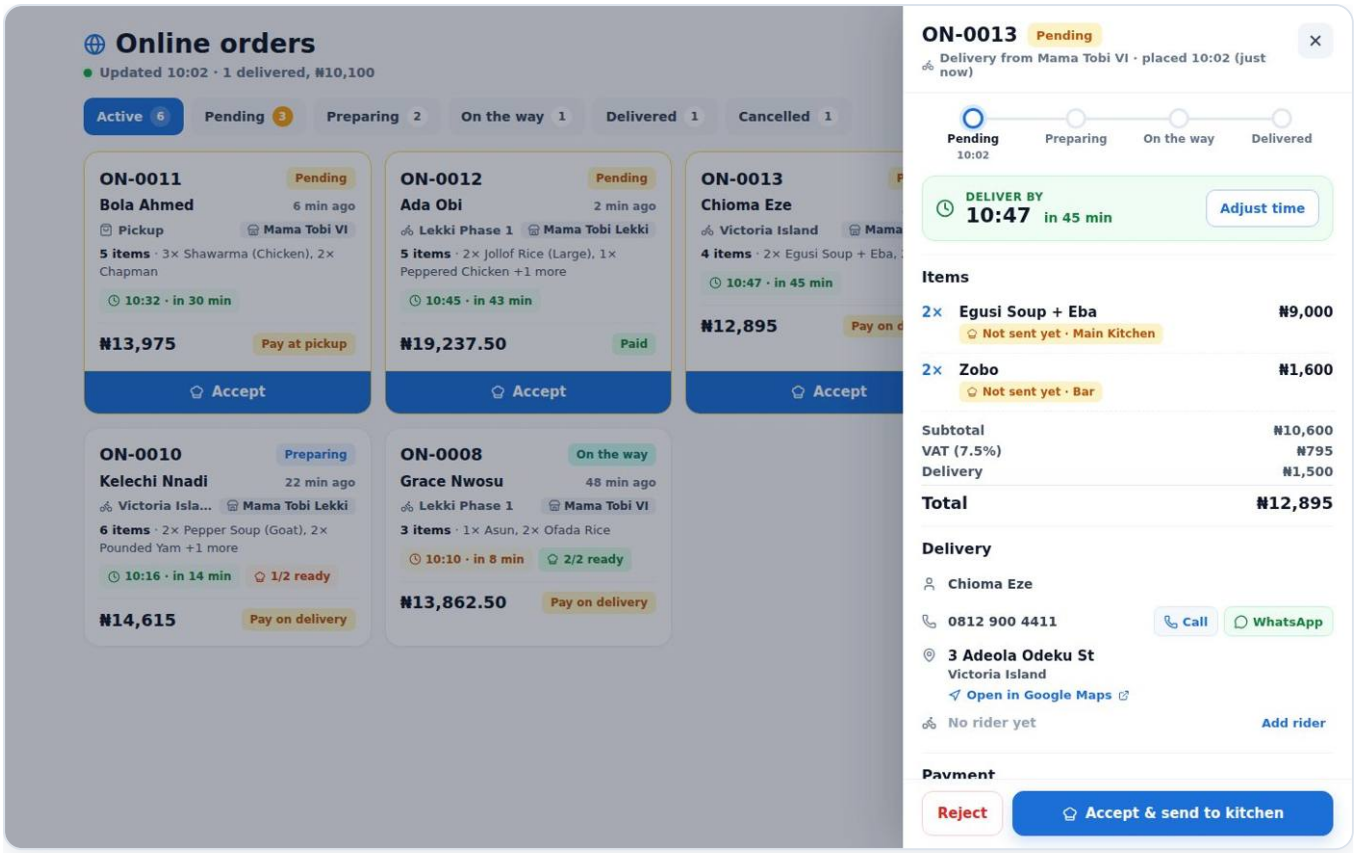

Figure 13.2 An order's details, with Accept & send to kitchen.

Tab	Shows
Active	Everything still in progress.
Pending	New orders waiting to be accepted.
Preparing	Accepted orders in the kitchen.
On the way	Out with a rider.
Delivered / Cancelled	Finished orders.

> **NOTE** Staff need the Online orders privilege to accept and deliver orders.

CHAPTER 14

Transactions and receipts

Every sale, from every venue and channel, in one list.

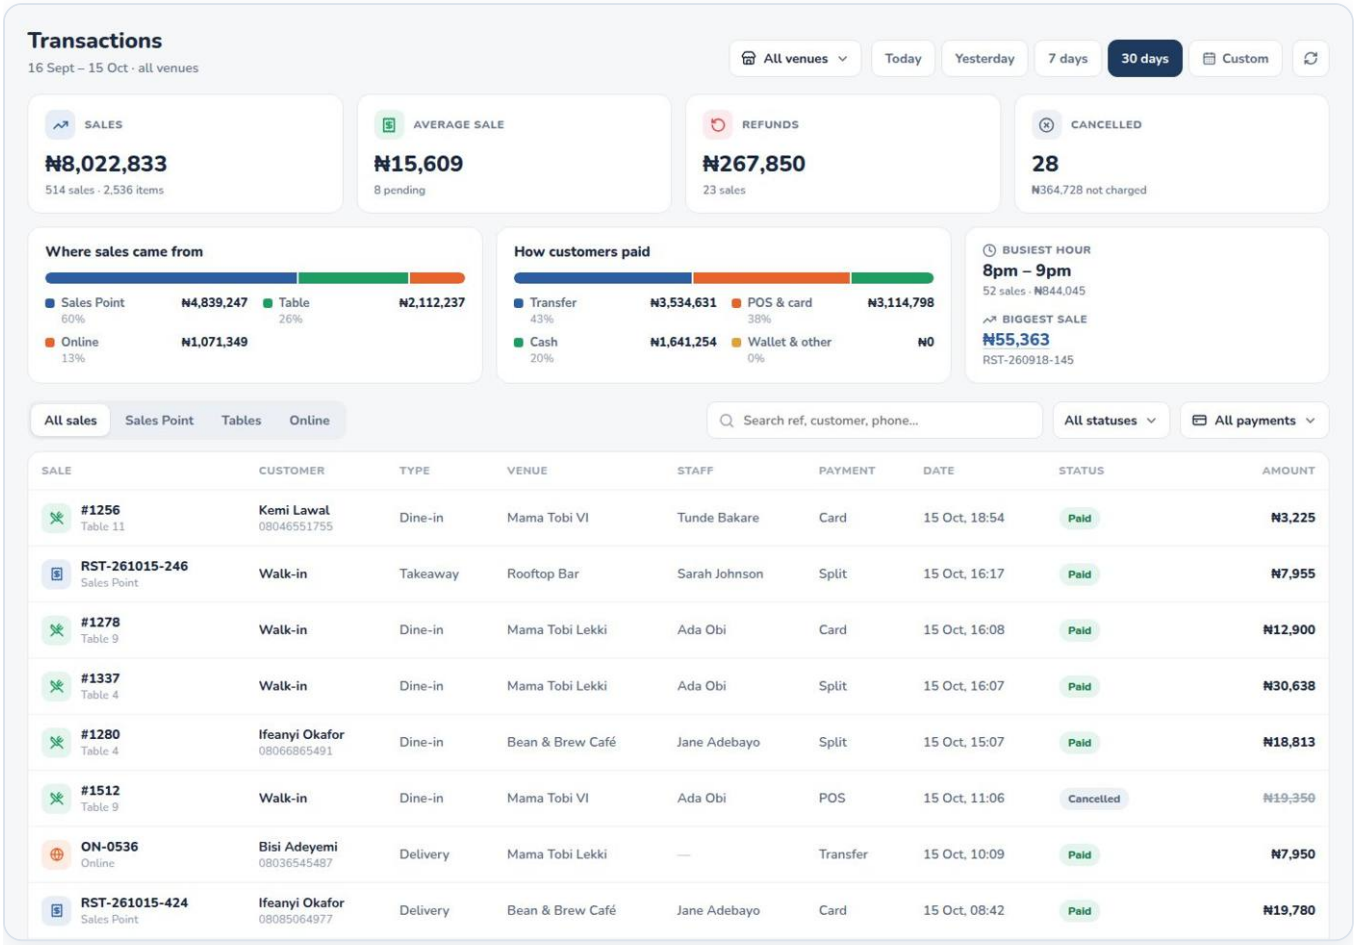

Figure 14.1 Transactions: totals at the top, where sales came from and how customers paid, then every sale.

Find a sale

- Choose the venue (or All venues) and the period: Today, Yesterday, 7 days, 30 days or a custom range.
- Switch between all sales and each channel: Sales Point, Tables and Online.
- Search by customer, phone or receipt number, and filter by status (paid, part refunded, refunded, cancelled, pending) and payment type.

Sale details

Tap a sale to open its details: customer, table, staff, items with sizes and extras, totals with discounts and VAT, payments, and a timeline of what happened.

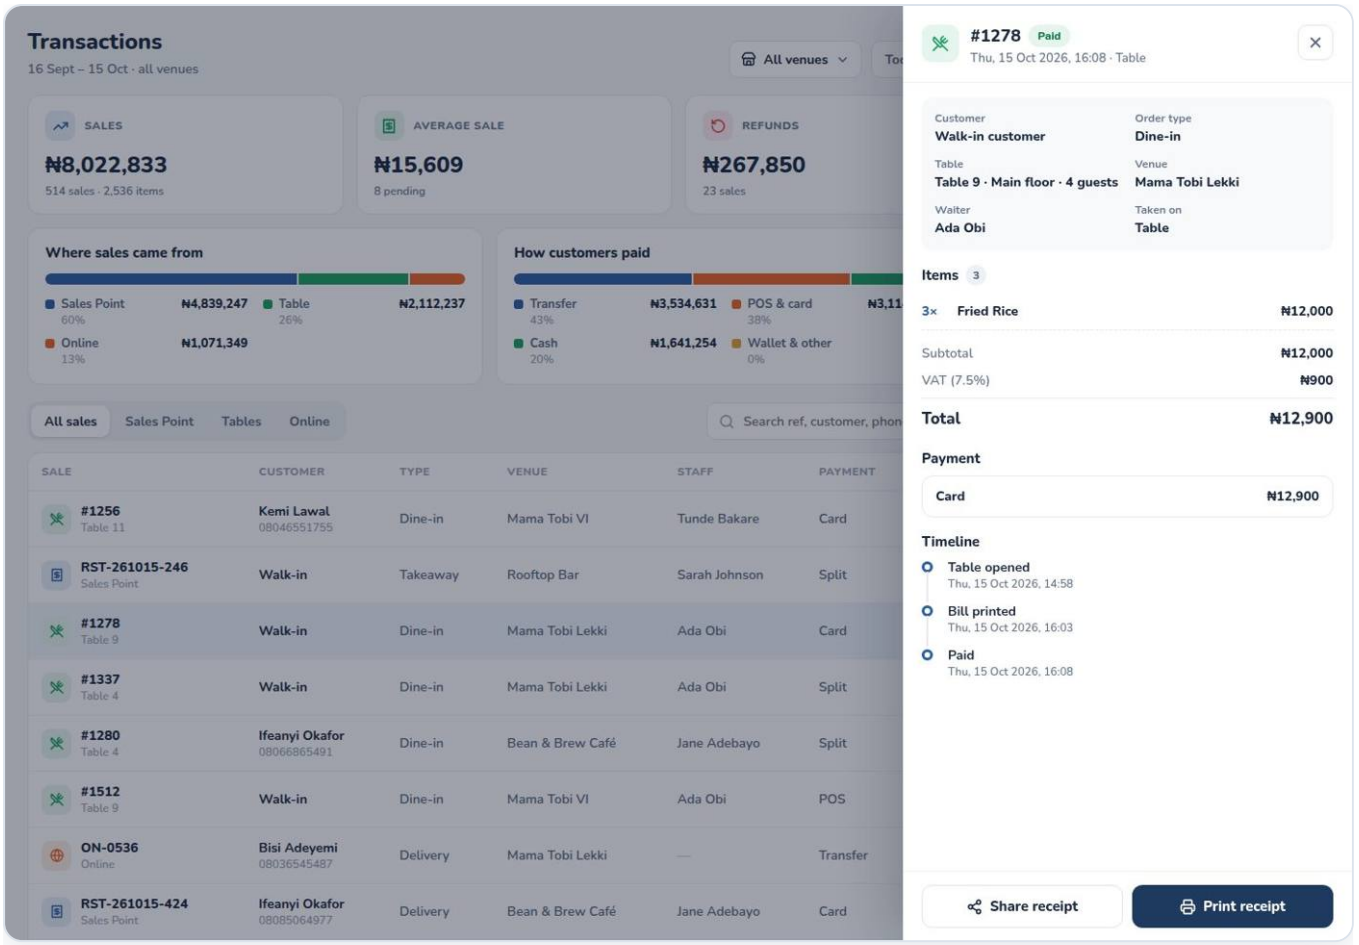

Figure 14.2 A sale's details, with Share receipt and Print receipt.

Reprint or share a receipt

- **Print receipt** prints the 80mm receipt again. Reprints say "Copy printed" with the date and time.
- **Share receipt** opens the phone's share menu, sends it to the customer on WhatsApp, or copies it as text.

If a sale was refunded or cancelled, the reprinted receipt shows it: a **REFUNDED**, **PART REFUNDED** or **CANCELLED** stamp under the title, and a refund section with the date, amount, who did it, the reason and the **Net paid**.

CHAPTER 15

Refunds

Give money back for a paid sale. A full refund also puts the items back on the menu.

Only the owner and staff with the **Refunds & voids** privilege can refund, and staff only at venues they work at. Refunds need an internet connection.

Refund a sale

1. At the Sales Point, tap **History**. Find the sale and tap **Refund** on its row, or open it and tap **Refund**.
2. The full amount left to refund is filled in. Change it for a part refund, or tap **Full amount** to go back.
3. Choose a reason (Wrong order, Customer complaint, Item unavailable, Overcharged) or type your own.
4. Check the note under the amount. It says whether this is a full or part refund.
5. Tap **Refund ₦...**. The sale updates straight away.

Full refund or part refund?

	Part refund	Full refund
Money	Part of the total goes back.	Everything left goes back.
Sale status	Part refunded	Refunded
Stock	Unchanged.	Batch and stocked items go back into stock.
Menu figures	Unchanged.	Sold today, sold all time and the month's sales go down.
Item history	Unchanged.	A "returned" entry is added to each item.

Several part refunds add up. When they reach the total, the sale becomes fully refunded and the items go back on the menu at that point.

> **TIP** If the refund didn't go through because the connection dropped, just try again. The same refund is never applied twice.

> **NOTE** You can't refund a cancelled sale, a sale that hasn't been paid, or more than what's left to refund.

Reprinted receipts show the refund (chapter 14), and refunds are taken off your sales in the Dashboard and Analytics.

CHAPTER 16

Dashboard and analytics

Know what makes you money: sales, profit, food cost, busiest hours and what's coming next.

The dashboard

The **Dashboard** is your business at a glance: sales, profit, orders, average order, stock value and refunds for the period you choose, with how customers paid, sales by venue, in-store against online, top sellers and things that need attention.

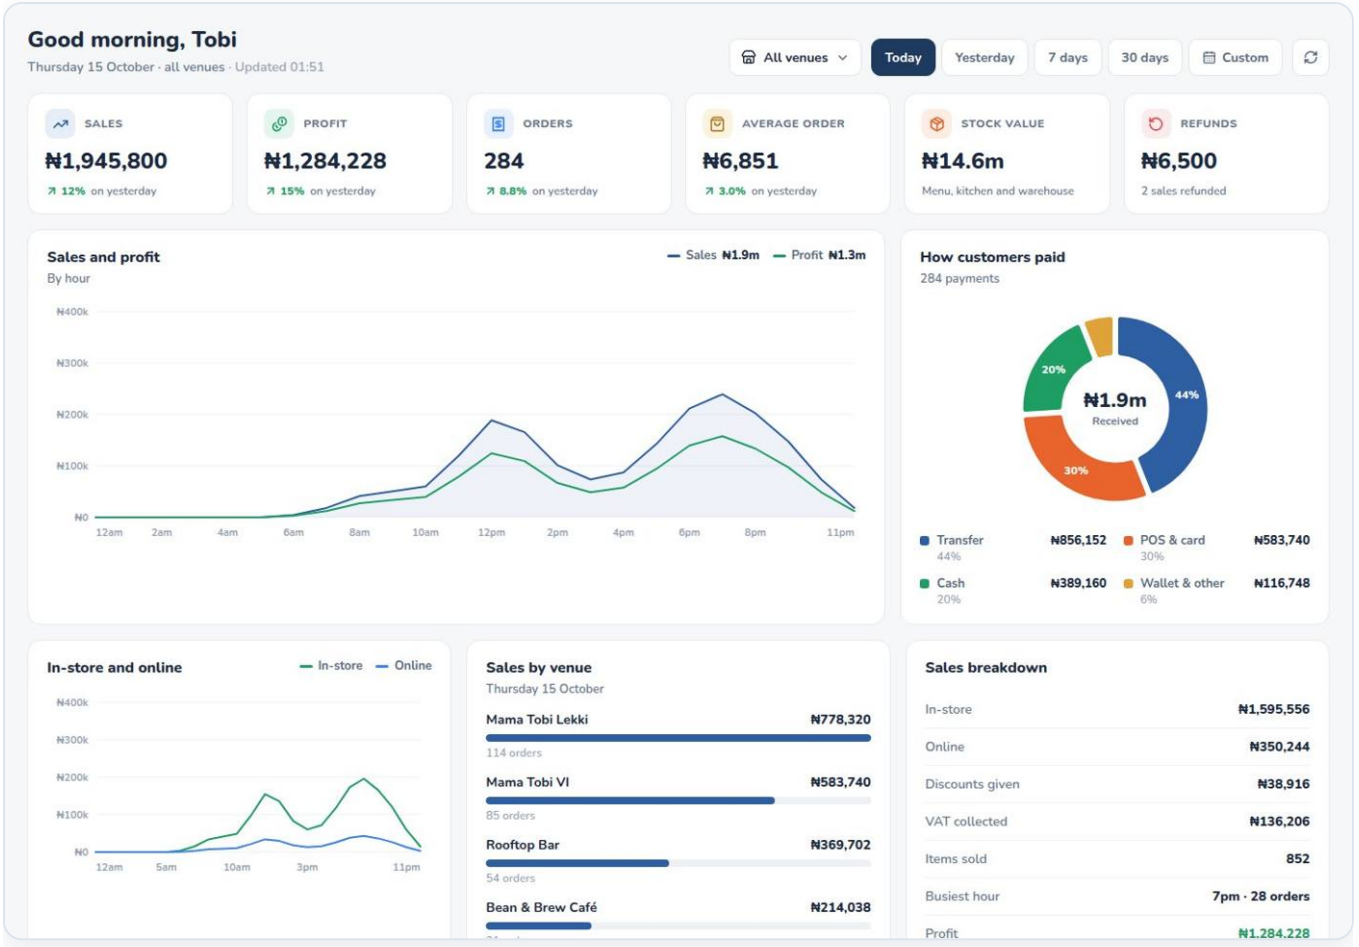

Figure 16.1 The owner dashboard. Choose the venue and period at the top right.

Analytics and reports

Open **Analytics** for the full picture. It needs the Reports privilege.

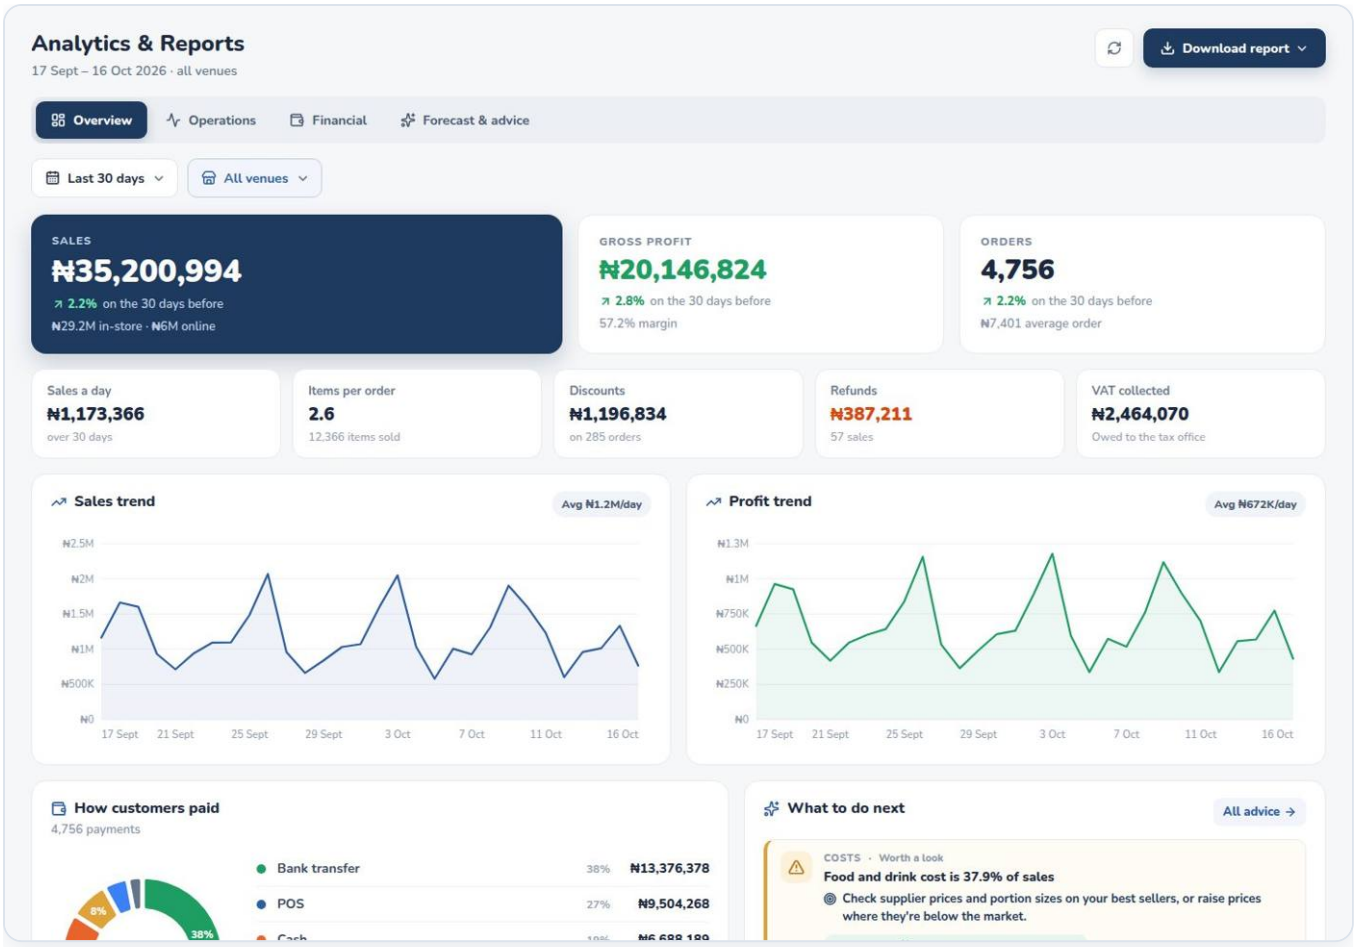

Figure 16.2 Analytics: the Overview tab.

Tab	What it shows
Overview	Sales, gross profit and orders against the previous period, trends, payments, kitchen and inventory summaries, and what to do next.
Operations	Busiest days and hours (heatmap), order types, channels, staff performance and kitchen times.
Financial	Where the money goes: food cost, discounts, refunds, VAT collected and profit, out of every ₦100 sold.
Forecast & advice	Expected sales for the coming days with a range, and practical advice: dishes to promote, reprice or drop.

Choose the period and venues at the top. On phones, the tabs show as icons and the advice sits behind the **Insights** button.

Download a report

1. Tap **Download report** at the top right.
2. Choose **PDF report** for printing and sharing, or **Excel spreadsheet** with every table on its own sheet.

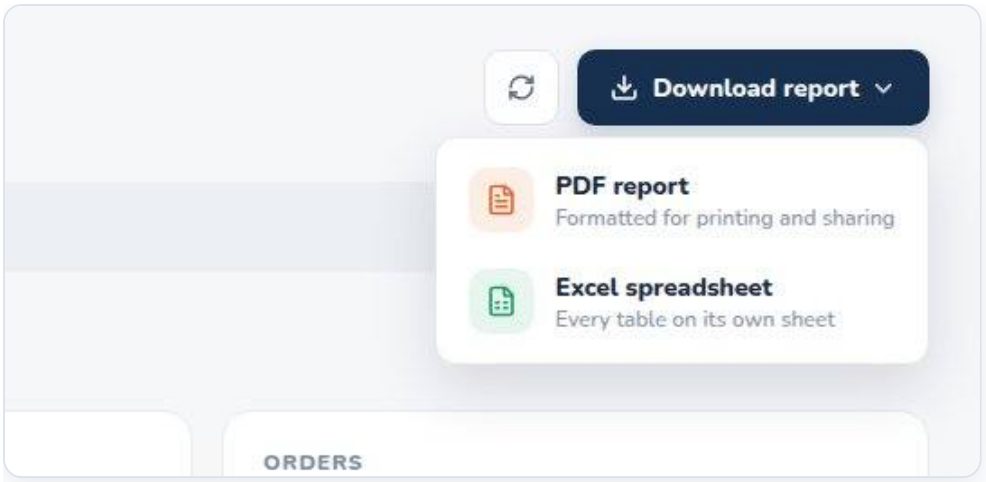

Figure 16.3 Download as PDF or Excel.

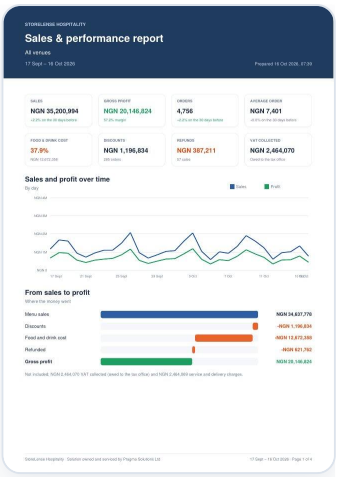

Figure 16.4 The first page of the PDF report.

> **TIP** The PDF report includes a business track record (months trading, monthly sales and payments). It's designed to support a business loan application.

CHAPTER 17

Working offline and syncing

StoreLense keeps working when the internet drops, and catches up by itself when it's back.

How it works

- Every sale and table order is saved on the device first, then sent to the server. Each one has its own id, so a retry never creates a duplicate.
- Stock counts on the device go down as you sell, so you can't oversell while offline.
- Kitchen tickets made offline are queued and sent when the connection returns.
- The sync chip in the top bar shows what's waiting (chapter 3).

The offline queue

Each venue's profile has an **Offline queue**: sales and orders saved on this device that haven't reached the server yet. Records are sent oldest first.

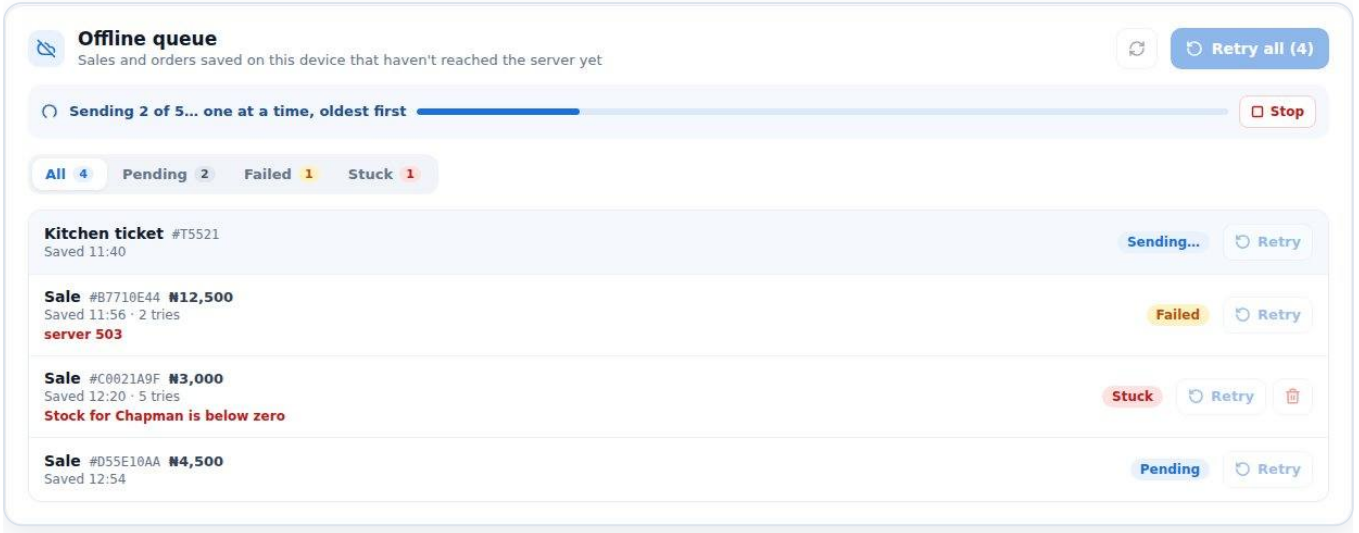

Figure 17.1 The offline queue, sending records.

State	Meaning	What you can do
Pending	Waiting its turn.	Nothing.
Failed	The last try didn't work. It will try again.	Retry now.
Stuck	Failed 5 times and holding up the rest.	Retry, Set aside (send the rest), or Remove.

State	Meaning	What you can do
Held	Set aside on this device.	Send this one now when ready.

CAREFUL Remove a record only when you're sure it shouldn't be sent, for example a test sale. A removed sale is gone for good. When in doubt, set it aside and call support.

CHAPTER 18

Settings and your account

Your profile, password, plan, referrals, help and privacy.

Profile

Settings › Profile shows your name, email and phone. Tap the camera on your photo to change it (crop it, then save). Tap **Verify email** if your email isn't verified yet. Add your gender, state and home address once; they're locked after saving, and support can change them.

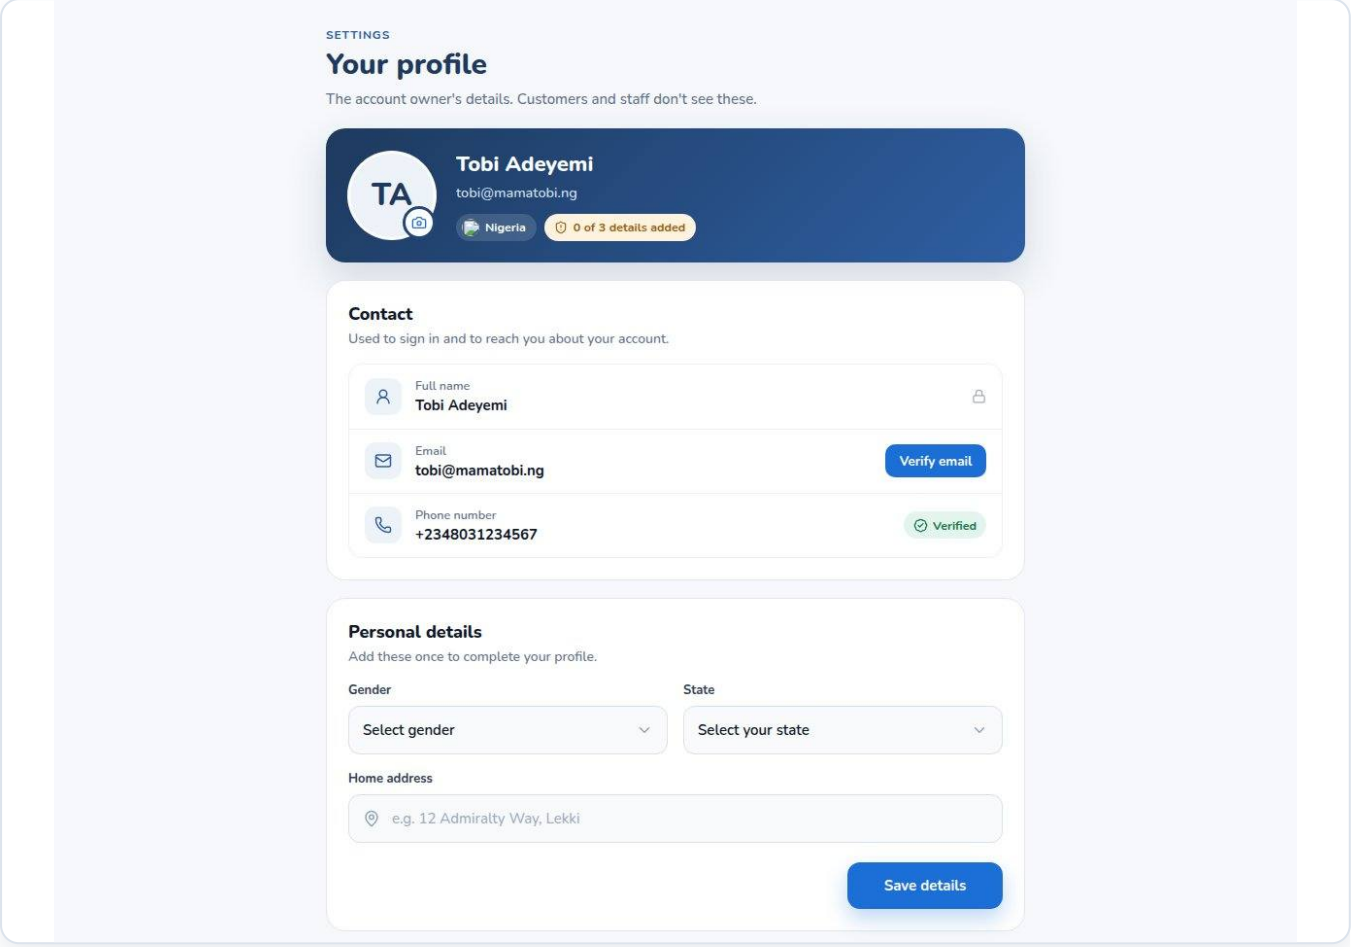

Figure 18.1 Your profile.

Change password

Enter your current password, then the new one twice. The new password needs at least 8 characters with an uppercase letter, a lowercase letter and a number; each rule ticks as you type.

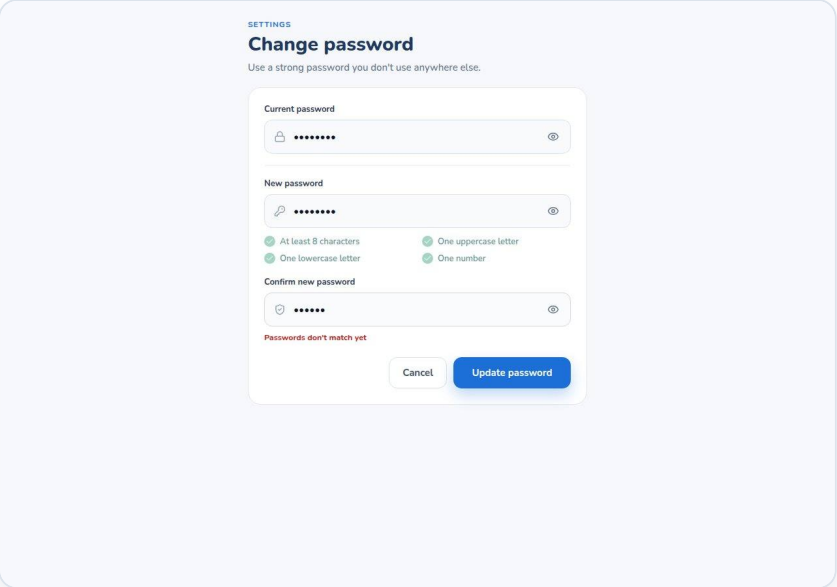

Figure 18.2 Changing your password.

Subscription

Settings › Subscription shows your current plan and when it renews or ends. Upgrade or switch plan from the plan cards, or tap **Cancel subscription** at the bottom.

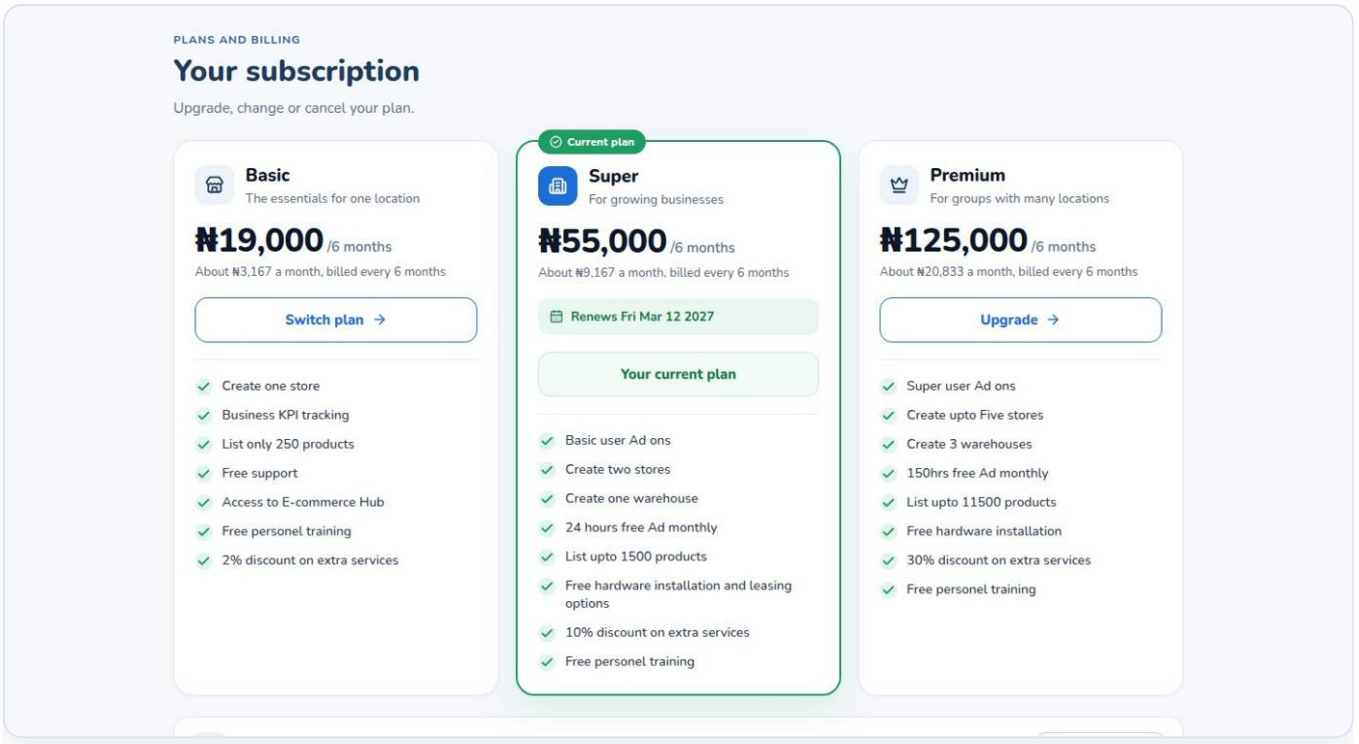

Figure 18.3 Your current plan, highlighted in green, with its renewal date.

Referral program

Invite other business owners and get paid when they're up and running. Copy or share your referral link; each referral shows how far they've got. Your available balance is shown with a bar towards the minimum withdrawal. Tap **Withdraw funds**, choose your bank, enter your account number, tap **Check** to confirm the account name, then **Confirm withdrawal**. Payouts take 4 to 7 business days.

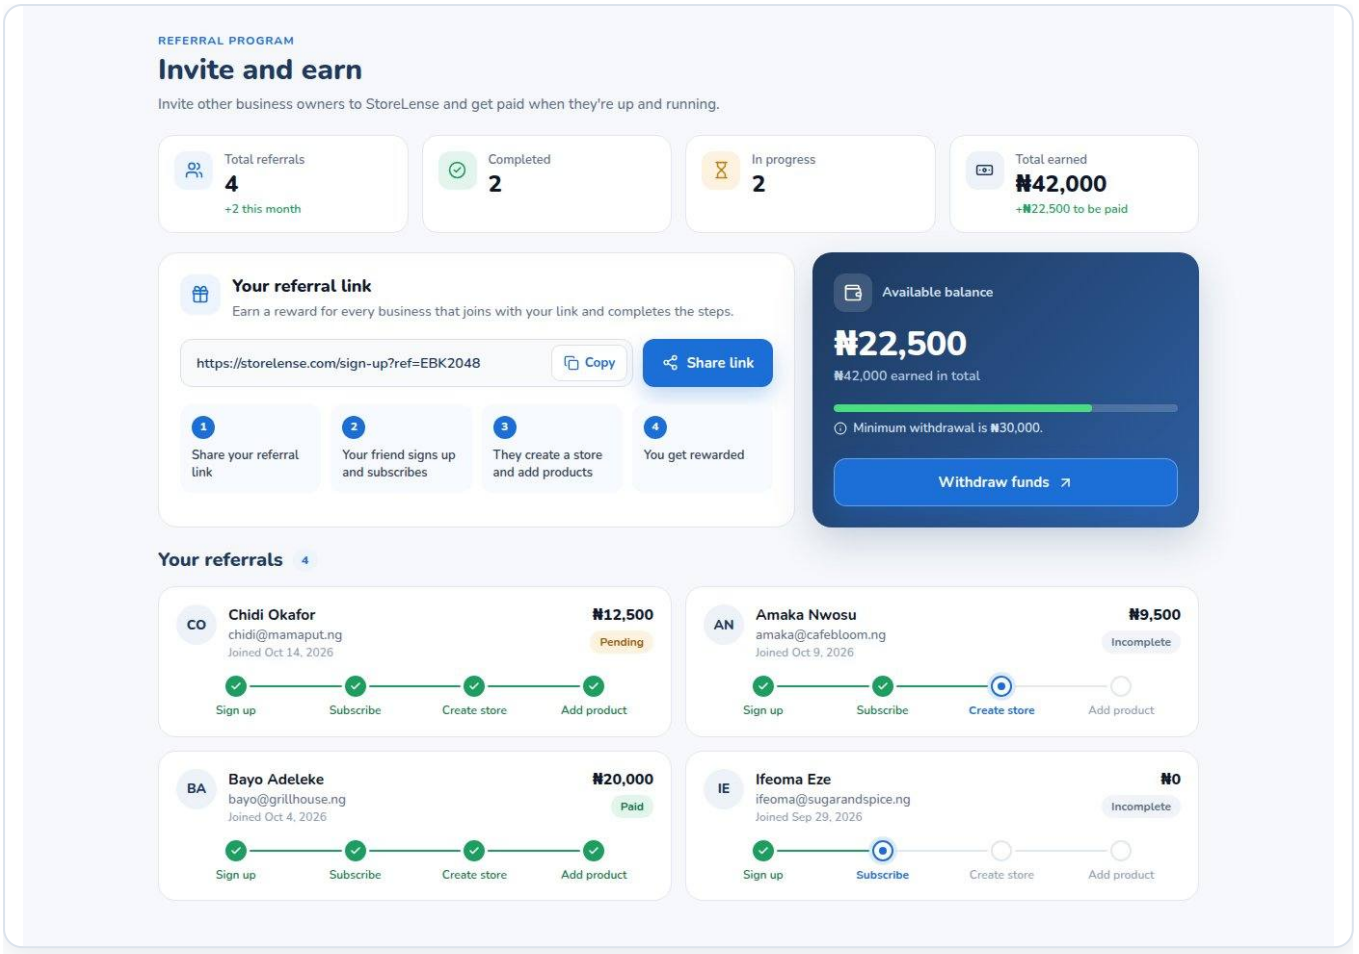

Figure 18.4 The referral program.

Help and privacy

Help and support lists the ways to reach the StoreLense team: WhatsApp chat, phone and email, plus answers to common questions. **Privacy and data** explains what data is collected, how it's used and protected, and your rights.

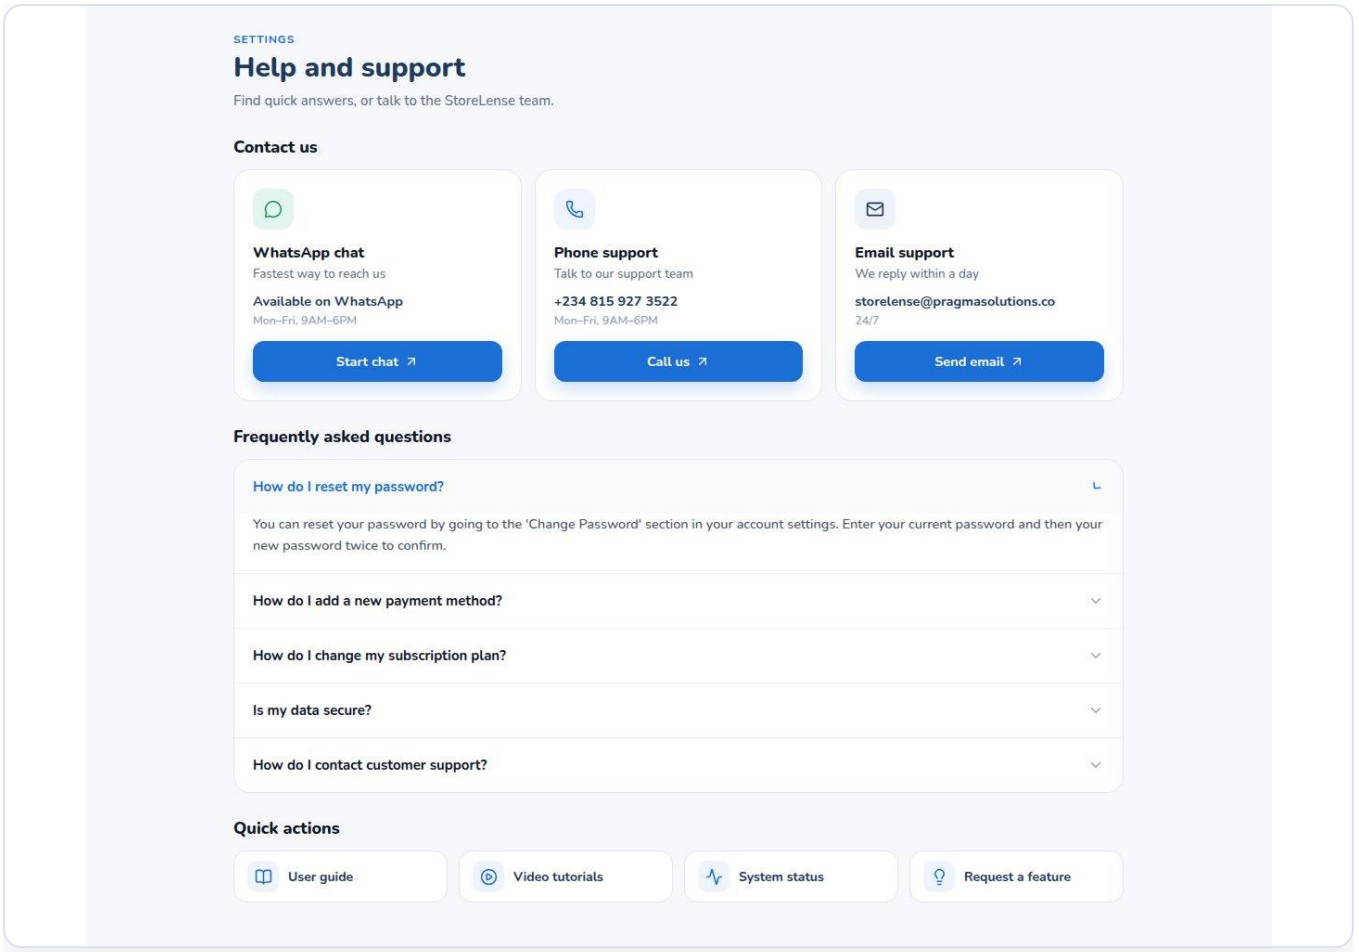

Figure 18.5 Help and support.

CHAPTER 19

Troubleshooting and FAQ

Quick answers to the questions staff ask most.

Problem	What to do
The kitchen doesn't chime on new orders.	Tap the kitchen screen once. Check the device and browser tab aren't muted and the sound icon isn't crossed out. Use Test in the screen settings.
A menu item says Finished or Out of stock.	Batch item: ask the kitchen to make a batch (or tap Request new batch). Stocked item: move more from storage or restock it.
"You don't have access..."	Your privileges don't include that screen. Ask your manager to turn it on in Employees › Access & privileges.
"You're not assigned to this kitchen / warehouse".	Ask your manager to add that place to your account.
The sync chip says stuck.	Open the venue's Offline queue. Retry the stuck record; if it keeps failing, set it aside and contact support.
We lost internet in the middle of service.	Keep selling. Sales and kitchen orders are saved on the device and send when the connection is back.
A staff member forgot their password.	A manager opens them on the Staff page and sets a new one (Change sign-in).
Someone left the business.	Deactivate them on the Staff page. Their devices sign out on their next check.
The refund button isn't there.	You need the Refunds & voids privilege, and the sale must be paid and not already fully refunded.
The receipt printed without the logo.	Check the venue has a logo. A slow connection can skip it; the receipt still prints.
The phone number on receipts is wrong.	Change it under On the receipt in the venue profile.
I need help.	Settings › Help and support: WhatsApp, phone or email. StoreLense also offers on-site setup and staff training.

CHAPTER 20

Quick reference by role

Tear-off checklists for the start and end of a shift.

Cashier

- Sign in with Staff sign-in and check the sync chip is green.
- Check the receipt printer has paper.
- Sell: choose Takeaway or Delivery, add items, Charge, take payment, print.
- Keep the auto-send switch on so paid food goes to the kitchen by itself.
- End of shift: check nothing is held and the sync chip is green, then sign out.

Waiter

- Open your tables from Tables and assign yourself.
- Add items, then confirm the order to send it to the kitchen.
- Watch the Orders page for items marked ready, and serve them.
- Print the bill, take payment, close the table and mark it clean.

Chef / kitchen assistant

- Open the kitchen screen and tap once to turn on sounds.
- Accept or queue each new order; load ingredients; Mark ready when done.
- Make batches for batch items and answer batch requests from venues.
- Record waste and restocks as they happen; count stock at the end of the week.

Storekeeper

- Add deliveries with Add Stock (scan the invoice to save time).
- Move drinks and packaged items to venues, and ingredients to kitchens.
- Check the warehouse history for anything unexpected.

Manager / owner

- Check the Dashboard each morning and the Analytics advice each week.
- Keep staff privileges up to date; deactivate leavers the same day.
- Look at expiring and low stock in the kitchens.
- Download the monthly PDF report for your records.
